Established 1802.

Thorburn's Seeds

For over a hundred years have been universally recognized as the standard of excellence.

Our Catalogue for 1903 is now ready and will be mailed free on application. We handle only the very highest class seeds, making a specialty of choice flower seeds for florists, and selected vegetable seeds for market gardeners. For nurserymen we have a very full line of native and foreign tree and shrub seeds and full lines of hybrid French Gladioli, Japan Lilies and Irises, etc. Our general descriptive catalogue, the handsomest, most complete and most reliable published, will also be mailed free to parties interested.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, ready for delivery in March, 75c. each.
$7.50 per Dozen; $50.00 per 100. Stock limited.

NEW CRIMSON RAMBLER, "PHILADELPHIA"

Flowers larger, more double, do not fade white, more durable, brighter color, not subject to mildew as Crimson Rambler is. 2½ in., **$12.00** per 100; **$100.00** per 1000. One-year field plants, cut back to 15 to 18 in., **$25.00** per 100. One-year field plants, 2½ to 3 ft., **$4.00** per doz., **$30.00 per** 100. Two-year field plants, 3 to 3½ ft., **Bushy, $7.00** per doz; **$50.00** per 100.

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

PEORIA, ILL.—James C. Murray has opened a seed store at 321 South Adams Street. The store will be managed by John Michie, a seedsman of 20 years' experience.

ST. JOSEPH, MO.—The Missouri Valley Seed Company, which recently moved into larger quarters at 110 South Fourth street, will employ thirty persons in its seed packing department this season, as against four seed packers last year. The firm reports a heavy sale of early Spring flower seeds. A. G. Samuel is manager of the company.

ST. PAUL.—Catalogue men in general, seedsmen in particular, will hail with delight the new postage bill which provides for the mailing of catalogues in bulk the same as newspapers. The department will be saved a stupendous amount of labor, likewise the seedsmen. The department will save not only the expense of canceling stamps, but also the cost of printing them, which, in the aggregate, must amount to thousands of dollars annually. The seedsmen will save the cost of stamping and in many instances the cost of the wrapper, as all catalogues for a common post office can be addressed in pencil and wrapped in a common bundle to be distributed by the postmaster to the separate addresses.

As the season advances the shortage of many varieties becomes more apparent. The prevailing scarcity of so many stocks should revert to the benefit of the catalogue men, for country merchants will not and cannot stock up on scarce sorts with the result that the farmers will order direct.

VERITAS.

CUSTOMS DECISION AS TO DRIED PEASE.—The following decisions have been handed down by the general appraisers at New York:

SEED PEASE. The term "seed pease" in paragraph 250, tariff act of 1897, applies to selected varieties of pease ordinarily knowns as vegetable seeds, which are sold under various fancy names, and are planted in gardens and on truck farms to raise green pease, used as food for table or culinary purposes.

BLACK-EYED MARROWFAT AND WHITE-EYED MARROWFAT PEASE.—Dried peas of these varieties, chiefly used as seed to raise pease for culinary purposes in the form of green pease, are dutiable as seed pease, at 40 cents per bushel, under said paragraph 250.

FIELD PEASE.—The Canadian field pea, sometimes called the "Canadian Beauty" pea, which is adapted to the purposes of raising ensilage and forage for cattle, or for enriching the soil by being plowed under, and which is imported almost exclusively for manufacturing purposes, such as the making of split pease for soup, and for other consumption purposes not culinary, cannot be classified as a seed pea, but is dutiable, when in a dried state, under the same paragraph at 30 cents per bushel, as "pease, dried, not specially provided for."

THE "MUSTARD SEED" CASE.—The famous mustard seed case of William H. Bell, of the town of Lockport, N. Y., against Frank B. Mills, of Syracuse, N. Y., has been settled on the defendant's proposition. The plaintiff purchased a quantity of seed oats from the defendant, who is a seedsman, and after they had been sowed it was found that they contained a large percentage of wild mustard seed. As a consequence, Bell's farm was badly injured for some time and he brought suit to recover from the seedsman. A verdict of $900 was first awarded him and this was set aside and a new trial ordered. On the new trial the case was non-suited and an appeal taken to the Appellate Division ordered a new trial, on the ground that there was error in taking the case from the jury. The terms of settlement are private.

European Notes.

The clearing away of the frost has enabled us to take a final look round at our cabbage plants and pull out the latest developments in rogues. The early varieties having been more perfectly developed appear to have stood the Winter fairly well; but the later sorts, which did not get sun enough to develop them, are a very moderate lot.

A small fire broke out in the warehouse of Jacob Wrench & Sons through a careless act on the part of a passerby! The damage was slight.

L. G. King, of John K. King, Coggeshall, has passed away at a comparatively early age. He had been ill for a long time.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

WESTERN SEED AND IRRIGATION COMPANY, Waterloo, Neb.—Price List of Seed Corn and Vine Seeds, etc.

ARTHUR COWEE, Berlin, N. Y.—Catalogue of Groff's new Hybrid Gladioli, with other varieties of acknowledged merit. An interesting pamphlet, profusely illustrated.

THEODOSIA B. SHEPHERD COMPANY, Ventura-by-the-Sea, Cal.—Descriptive Catalogue of Seeds, Bulbs and Plants, with an interesting list of Novelties and Specialties. Illustrated.

W. B. LONGSTRETH, Gratiot, O.—Illustrated Catalogue of Garden, Field and Flower Seeds, Supplies, etc.

D. S. Lake, Shenandoah, Ia., Vice-President
George C. Seager, Rochester, N. Y., Secretary
C. L. Yates, Rochester, N. Y., Treasurer.

RIVERSIDE, CAL.—The Chase Nursery Company has purchased 1,250 acres of choice foot hill land here, and will plant out an orange grove of 750 acres. It is reported that $60,000 was paid for the tract. This land is all above water, and a pumping plant, with a 75-horsepower engine and triplex pump, will be at once installed to lift the 200 inches of water needed to irrigate the tract.

Mosquito Bane.

Under the heading of Mosquito-Bane the London Gardeners' Chronicle contains the following: "Mr. Shipley records in Nature the belief entertained in Western Africa that mosquitoes are driven away by a particular plant, some leaves of which have been sent to Kew, and have been identified as belonging to Ocimum viride. Captain Larymore, the resident of the Kabba province, northern Nigeria, confirms the notion of the efficacy of the plant, for he says that by placing three or four of these plants round his bed at night he was able to sleep unmolested without using a mosquito net. Mr. Shipley collects a considerable amount of evidence to show that the plant has valuable medicinal properties, and may possibly be of service in banishing the gnats which are the carriers of the malaria poison." This may contain a hint which may be serviceable to florists, who often have many mosquitoes in their greenhouses, because of the presence of so much heat and moisture. As many readers will know, this plant belongs to the basil family, the well-known sweet basil being Ocimum Basilicum; and may it not be that this or some other species may possess the same virtue as O. viride.

Hardiness of Chamaerops Excelsa.

A friend asks me if I think the Chamærops excelsa would prove hardy in a garden in southern Virginia. I cannot say, but would have hopes of its success there. It is a native of China and Japan, and many plants from those countries endure considerable cold. It lives outdoors along the south coast of England, where the plants endure 15 degrees of frost at times. There are large specimens there which are of a flowering age, and which produce well-ripened seeds annually. Doubtless this and many other nice things would flourish in places where they are yet untried, were the attempt made.

Climate as Affecting Hardiness.

In the English Journal of Horticulture, with some notes of Smilax argyrea and others, it is said our wild green briar, Smilax rotundifolia, "is almost or quite hardy, and has stood out on pergola chains and on pillars north of the rock garden at Kew for some years." Think of it, a vine which stands our hardest Winters, say, 15 degrees below zero, being spoken of as "almost or quite hardy" in the comparatively mild climate of England! We know that the thorough ripening of wood which plants of all kinds get here has much to do with their passing our Winters uninjured, but none of us would think our old friend the green briar would fail to do there what it does here, viz., thrive wherever it gets a foothold.

Sowing Seeds of Ampelopsis Veitchii.

Ampelopsis Veitchii, the Japanese ivy, is a vine nurserymen and florists sell by the thousands. Before large vines were as plentiful as they are today, the plant was increased mainly by cuttings; but at the present time seeds can be had so easily and cheaply that to propagate it by seeds is the plan almost everyone adopts. Seeds sown now, in boxes, under a greenhouse stage, and brought to the light when the seeds begin to germinate, which should be in April, give good, strong seedlings by Autumn.

Nurserymen sow the seeds outdoors in Autumn, or keep them in a damp place until Spring, sowing them as early as the ground will permit, and the product either way is hundreds of thousands of seedlings.

Skimmia Japonica.

The Skimmia japonica is one of the dwarf broad-leaved evergreens rarely seen in this country, yet entirely hardy, at least as far north as Philadelphia, where plants of it have stood out unprotected for many years. It is one of many of the evergreens which owe their obscurity to the lack of enterprise of importers to invest a few dollars to test many plants of this class almost unknown here. There has no doubt been some excuse for this in the years past. The nurseryman's sales were made North, hence he grew and imported such sorts only as were very hardy. Now his sales are extending South as well, and to keep his trade o the height of others he will have to embrace in his lists, not only stock hardy with him, but that also which will be hardy hundreds of miles south of him. And this he will have to be doing soon, or get left a long way behind.

The Skimmia japonica is but a dwarf evergreen, rarely growing but two to three feet high. Its flowers are white and of delicious fragrance; and succeeding the blooms are berries, which become of a bright red and which last all Winter. When well berried the plant is very handsome. It makes an exceedingly effective pot plant, and can be increased from seeds or cuttings.

Magnolia Grandiflora.

It is said of the Magnolia grandiflora that when groves of it are in blossom in the South the odor of the flowers is almost intoxicating. Our few solitary specimens here do not give us a chance to realize this delight, though the individual flowers are slightly fragrant. But the broad, shining evergreen leaves give such a marked character to the tree that one can scarcely believe it to be a native of an American forest. As in most cases of plant species, there are striking variations in the individuals. Some have long and quite narrow leaves, others leaves almost round, and then, while some are green on both sides, others are of a deep cinnamon color on the underside. These "fuzzy" ones, as they are called, have also fuzzy shoots; and, because of the contrast of color, many prefer this sort to any other.

It has been said that the flowers follow in their petals the form of the leaf, being narrow-petaled on the narrow-leaved ones, and broad-petaled on the broad-leaved sorts. How this may be I do not know, but Mr. John Fraser, of Huntsville, Ala., says the narrow-leaved ones are the first to flower.

Besides being hardy in sheltered places as far north as Philadelphia, this magnolia makes an excellent tub plant.

Hardy Azaleas.

During the month of May almost all of the azaleas flower. The only one of our native species which does not, that I know of, is A. viscosa, which comes later, in July.

Azaleas, when in bloom, are often less satisfactory than they would be because of the plants having been in an open sunny situation, where the blossoms quickly fade. In strong sunlight and dry air they quickly droop. Azaleas are naturally shade-loving plants, and always show their appreciation of being planted in such a situation.

How often are nice collections of the Ghent, the mollis, and other choice sorts seen set out in beds in the full sun, and often dry at the roots besides!

The proper position for these plants is one where a little of the morning sun will reach them, but not that of midday or of the early afternoon.

I have often seen imported azaleas suffer badly from poor planting. As they reach us, usually, there is a large ball of earth attached to them. When planting them no effort is made to compact the new soil with the ball, resulting in a drying out of the plant, even in but moderately dry times.

Some of our native azaleas are extremely handsome. Particularly is this true of A. calendulacea—the flame-colored one. The common A. nudiflora could be introduced to many of our half-wild shrubberies, as well as A. Vaseyi, the pink one of the Carolinas. Any place that is quite damp will be the very spot for A. viscosa, and when in possession of this there will be flowers in July, white and sweet-scented.

Hardiness of English Walnut.

Correspondents often ask me how far north the English walnut may be considered hardy. In answer I have told them that Pennsylvania seems to be the line, though along the coast the trees are found in Connecticut and large ones have been seen thriving near Lake Ontario, N. Y. A good deal of the hardiness of young plants depends on where the nuts were ripened. There are localities in Germany where the trees thrive when the thermometer marks pretty cold weather in Winter, and nuts from such trees would give hardier progeny than those from trees in the South of Europe. There is no doubt of this; and if nurserymen would endeavor to secure nuts from such sources this walnut might be grown further north than it is. There are trees in Germantown, Philadelphia, planted by the old Germans who settled there years ago, old and of great size, which are absolutely hardy. Nuts from such trees would give hardier seedlings than those from trees further South, or which had never experienced hard freezings. Walnut seedlings, as generally offered by nurserymen, are those that have been imported from Europe or raised from imported nuts. Even in Philadelphia these seedlings, when but a foot or so in height, are apt to have their leading shoot killed in Winter. This is what makes so many trees low-branched that come from imported nuts. After a few years have passed and the trees get hard wood the Winters do not affect them.

This suggests the sowing of the seeds in places where the wood will get well ripened in Autumn, giving them a better chance to get through the Winter safely. JOSEPH MEEHAN.

PAMPHLETS RECEIVED.

FLORICULTURAL AND HORTICULTURAL LITERATURE.—This is a very comprehensive catalogue of books on Botany, Horticulture, Floriculture and kindred subjects, compiled and published by The A. T. De La Mare Printing and Publishing Company, N. Y. (publishers of the Florists' Exchange), from whom copies can be secured on application. Considerable care has been exercised in the work of compilation, and the selections present the best books of their class. We heartily recommend this catalogue to the craftsman who is an intending book buyer.

UTICA, N. Y.—Business is rather quiet. A. J. Williams was frozen out of some of his houses; something wrong with boiler. McQuivey has plenty of work. F. J. Baker is doing a good trade. Peter Crowe has turned reformer; he is busy trying to clean his neighborhood of some obnoxious folk. William Mathews is cutting a great many orchids, which are being used to good advantage in funeral work. Geo. H. Benedict cannot supply the demand from out-of-town customers. Pfiefer keeps pretty busy. F. E. Shaw has a large quantity of funeral work. W. A. Rowlands has a contract for all his carnations and cannot get enough. He has a fine range of houses devoted exclusively to this stock.

TO GIVE SATISFACTION IS OUR AIM

Write for the best illustrated Carnation catalogue ever published

LILLIAN POND

THE grand new white Carnation. Far ahead of any white yet introduced. Large, heavily built flowers, very fragrant and an exceptionally good keeper.

It has given us thus far this Winter more flowers to the plant than White Cloud or Queen Louise and is bringing, in the Boston wholesale market, $5.00 and $6.00 per 100.

An early and continuous bloomer, strong grower, and lifts well from the field.

We shall show at the Brooklyn Meeting only average-sized flowers the same as we are picking and shipping every day and such as any grower will be able to produce with ordinary care. We have put this variety under no special teatment for this occasion.

Our large stock of 24,000 plants enables us to send out nothing but strong healthy cuttings.

All orders filled at short notice.

PRICES: 12, $1.50; 25, $3.00; 50, $5.00; 100, $10.00; 250, $23.00; 500, $37.50; 1,000, $75.00

NONE SUCCEEDS LIKE

New Carnation **$UCCE$$** The Money-Maker

The Most Prolific Carnation to date

A pleasing and most popular shade of pink—the shade of La France rose, large, well formed flowers, strong calyx and stout stems. Good keepers and shippers. Plants strong and vigorous, and easily handled. Has shown a marked improvement in size, stem, and productiveness every succeeding season for the past five years.

The wonderful productive properties of "Success" have not been overdrawn. It stands to day without an equal in this respect. If you are raising Carnations for profit, "Success" will pay you better than any other variety.

Strong, heavily rooted cuttings: $1.50 per dozen; $2.50 per 25; $8.00 per 100; $70.00 per 1000. Immediate delivery. For sale by

TIGER

ORANGE, STRIPED PINK

Up-to-date and the Most Prolific in its Color

TIGER CARNATION

HARRISBURG, PA.
Dec. 13, 1902.

MR. HENRY EICHHOLZ,
Waynesboro, Pa.

Dear Sir:

I think Tiger Carnation is a very beautiful variety. I have never seen a variegated carnation that pleased me more. The combination of soft salmon and light rose-pink is unique and beautiful, and the carnation is free from the grotesque appearance characterizing many variegated forms. The effect of a mass of them is harmonious and rich, and I do not see why this variety will not meet with much commendation by those who care for a beautiful flower.

J. HORACE MCFARLAND.

$1.50 per doz.; $10.00 per 100; $75.00 per 1000

The American Carnation

How To Grow It

A Standard Work Written by Request of the Publishers of the Florists' Exchange.

By C. W. WARD

THE CARNATION in America has reached a status and importance in the florist's industry possessed by no other flower of modern times, and a practical work on the subject of the cultivation of the plant has become an urgent necessity. This want is fully and completely met in the present volume, which furnishes the results of years of actual experience of the author, who is recognized as being among the foremost of carnationists in America. The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation—The Carnation in America—The Commercial Importance of the Carnation Industry—The American Carnation Society—Use of Carnations as a Decorative Flower—General Greenhouse Culture—Soils—Manure and Fertilizers—Propagation and Shipping of Young Stock—Treatment of Young Stock preparatory to Planting Out—Field Culture—Lifting and Planting Carnations from the Field—Treatment after Benching—Picking, Packing and Shipping Carnation Flowers—Insects and Preventives—Diseases and Injuries—Packing and Shipping Field-grown Plants—Forcing Houses for Carnations—Bench Construction—Sub-irrigation—Heating Carnation Houses—Carnations for Summer blooming—Bedding and Hardy Carnations—Carnations for Pot Culture—Raising Carnations from Seed—Cross breeding and Fertilizing—Varieties—Sports and Variations—The Ideal Carnation—Traits and Peculiarities—Various Classifications of the Carnation—List of Varieties for Different Localities—The Future of the Carnation—Its Commercial aspect and Prices—Who shall engage in Carnation Growing—Does it Pay to do things Well—Calendar of Operations—Carnations in California, Canada, in the West, the East, the South.

It will at once be seen that a work of this nature should be in the hands of every florist and others interested in the subject who desire to keep abreast of the times, and to make the growing of carnations, by the most modern methods, a profitable part of their business.

The Book is profusely illustrated by original engravings from life made specially for this work, with four colored plates. Handsomely printed from large, clear type on fine enameled paper. Quarto, cloth. Price, $3.50.

THE Water Garden

BY William Tricker

A Standard Work Written by Request of the Publishers of the Florists' Exchange

THE cultivation of the Lotus or Water Lily, and other aquatic plants, is easily the most fascinating of all pursuits, and this is the only book ever published on the subject. The writer is the standard authority for America. Every detail is covered, all water plants described, and no other guide is needed.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of grounds, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details. The work contains nine beautiful plates, eighteen full page descriptive views of leading water gardens and ponds, and numerous smaller pictures prepared with special reference to this book. Printed on heavy enameled paper Elegantly bound. Large octavo; cloth. Price, $2.00, by mail, postpaid

Society of American Florists and Ornamental Horticulturists.

The Executive Board will hold its annual Winter meeting at the Plankington Hotel, Milwaukee, Wis., on Tuesday and Wednesday, March 17, 1903.

WM. J. STEWART, Secretary.

The American Carnation Society.

We present in this issue a full report of the annual convention and exhibition of the American Carnation Society. The report this year is considerably curtailed as compared with any of its predecessors, owing to the fact that no essays were read, and but little of general importance came up for consideration by the delegates at the meetings.

The most vital matter under advisement was that in regard to the registration of sports. The action taken, to register these sport varieties, provisionally until examination of them at the annual exhibition of the Society shall have proved them worthy of a separate name, will safeguard buyers and tend to reduce duplication of kinds—something that present conditions demonstrate requires adjustment.

The exhibition, the quality of the flowers shown, and other details will be found elsewhere in this issue.

Never before, perhaps, has the carnation had as its devotees such a brilliant assemblage as that which viewed the exhibition on Thursday evening. That the trade, locally and generally, will receive benefit therefrom goes without saying.

There is every reason to believe that interest and enthusiasm in the carnation will be maintained for many years to come; something which the recently organized Carnation League will surely stimulate. Our specialists will rise to the occasion, and in Detroit, next year, we may confidently expect to see the very high standard reached in the development and improvement of the divine flower excelled.

AMERICAN CARNATION SOCIETY.

Varieties Registered.

By John Hartje, Indianapolis, Ind.

PROFUSION.—Color, pure white, of medium size, stiff stem, gives quantity of bloom during Winter months.

MOONLIGHT.—Color clear white; of large size; long, wiry stem, dark foliage, continuous in blooming.

By A. Herrington, Florham Farms, Madison, N. J.

UNA.—Color clear bright pink; form good; calyx perfect; flowers three to three and one-half inches and very fragrant. The result of crossing Mrs. James Dean and Miss Andrey Campbell, the latter an English variety.

By Charles H. Allen, Floral Park, N. Y.

WHITE LAWSON.—Color white; a sport from Mrs. Thos. W. Lawson; has not reverted to original in three years and is in every way superior to original, as the White Lawson does not burst its calyx.

ALBERT M. HERR,
Lancaster, Pa.,
Secretary.

The firm registering the variety Peerless, noted in last week's issue, page 166, was the J. D. Thompson Carnation Company, Joliet, Ill.

Express Rates.

The subjoined communication has been addressed personally to the Hon. T. C. Platt, of the United States Express Company, and has been acknowledged by that gentleman:

Hon. Thomas C. Platt.
President United States Express Company, New York.

Dear Sir: I hold a petition to your company. It relates exclusively to this neighborhood of about four miles. Some 85 growers of cut flowers having as many establishments, are the signers of it. We have been, all of us, constant daily shippers, affording you daily revenue of from $50 to $100 at old rates. The past eight months will not serve as criterion, as we have just passed through a phenomenal period of unproductiveness, reducing output to half.

We saved you expense of calling for our goods. We used almost exclusively but one morning train; involving on your part a delivery to only a small city district not five blocks across. To the large amount we paid you, we had to add a cost of thousands of dollars for boxes broken by your people. Instead of getting this remedied, your company has greatly advanced your charges. More and more of us are compelled to use waggon express, realizing prompter delivery, less hurried and far more considerate handling. No doubt your earnings from our shipments cut a very small figure in your extensive affairs; still the flowers of this locality did afford you at old rates some $25,000 annually. The majority of these growers are poor men, whose net income this Winter is a negative quantity. We invite your "route agent" to visit many of them hereabouts and report to you. And we ask your several companies to rescind an advance, which, to say the least, you have made at a most inopportune time.

Respectfully yours,
FRANK L. MOORE.

Chatham, N. J.
Representing all flower shippers of this immediate locality.

BOOKS RECEIVED.

A WOMAN'S HARDY GARDEN, by Helena Rutherford Ely. Publishers, The Macmillan Company, 66 Fifth avenue, New York City. Illustrated.

The number of books on gardening subjects having women as their authors, appearing in America, is a healthful sign of the growing interest in the art being taken by the fair sex—an interest that augurs well for its greater development when viewed in the light of hereditary transmission. The book before us is written by one who has an inborn love of the subject on which she treats, and she handles it with a knowledge and skill, the result of which is informative and interesting. The work, of course, is written from an amateur's standpoint, and to the suburbanite who would have a garden without the aid of a practical gardener, the book will prove an unerring guide. Instructions are furnished on laying out a garden and borders around a house, how to plant a small plot, with accompanying plans, annuals, perennials, shrubs, insecticides, etc.

The author pictures the exit of Eve, the first woman gardener, from Eden in this wise: "And, then to leave the lovely place at the loveliest of all times in a garden, the cool of the day! Faint sunset hues tinting the sky, the night breezes gently stirring the trees, lilies and roses giving their sweetest perfume, brilliant Venus mounting her accustomed path, while the sleepy twitter of the birds alone breaks the silence. Then the voice of wrath, the Cherubim, the turning flaming sword!" This departure seems to the author the bitterest punishment of the first gardener and his wife.

Like others of her sex who have written on the garden craft, our author touches on the help problem as it exists to-day. She says: "The character of professional gardeners seems to be changing. They have become more perfunctory, more stubborn, more opinionated, until now it is a really serious question with them of the danger of a little knowledge. To find a man who combines sobriety and a good disposition with a fair knowledge of his business and a real liking for it, is a difficult matter. Where but one man is kept to care for vegetables, flowers and lawn, he is more than likely to have little interest beyond potatoes or corn, or to be good at raising small fruits, and to consider everything else he has to do, as so much waste of time. When first married, one of our gardeners was a German who took no interest in flowers, and planted half the vegetable garden with Kohlrabi and korn salad. * * * I remember also his telling me that one kind of flower was enough to raise, anyway."

Mrs. Ely commends garden work to her fair sisters, adding, truly, "If the rich and fashionable women of this country took more interest and spent more time in their gardens, and less in frivolity, fewer would suffer from nervous prostration, and the necessity for the multitude of sanitariums would be avoided."

The price of the book is $1.75 net. It is a work that the trade could recommend with safety to their customers. Copies can be secured from the publishers of The Florists' Exchange.

Obituary

James Gordon.

Members of the craft will learn with regret of the death of James Gordon, one of the employees in the store of John V. Phillips, 272 Fulton street, Brooklyn. Mr. Gordon had been with Mr. Phillips for over 10 years, and for the 12 years previous to that time was in the employ of Mr. Weir, who occupied the store that Mr. Phillips now conducts.

Mr. Gordon was born in Staten Island, of Scotch parentage, 54 years ago, and when we say that he was employed for over 22 years in the same store, no further comments are required to demonstrate his character as a man and his ability as a florist. His death was sudden. Taken ill about seven o'clock on Sunday evening, at his residence 1402 St. Mark's avenue, Brooklyn, he died after a few hours' illness. He leaves a widow and one son to mourn his loss.

Funeral exercises were held at the home Wednesday, and the interment took place in Greenwood the following day.

Interest in Gardening in America

Our esteemed contemporary, The Gardeners' Chronicle, of London, in expressing regret—a regret which we fully share—at the discontinuance o Meehans' Monthly, draws the following not unnatural deduction from tha fact: "The cessation seems to poin to a lamentable lack of interest in plants and plant culture in the States except for purely commercial purposes."

But Meehans' Monthly was discontinued not perforce from lack of interest either in the publication or the cul which it promoted, but, as its edito announced, because "the burden o other duties" made the continuance o the Monthly impossible.

There is no "lamentable lack of interest in plants and plant culture in the States." On the other hand, the interest in these is increasing, as i evidenced by the annual augmentation to our commercial and amateur establishments.

Lack of interest in publications devoted to gardening matters, causing their cessation, does not necessarily imply waning enthusiasm is the subjects which these publications were supposed to promote. The lack may lie in the periodicals themselves. And too, there would be little or no need of any such interest "for purely commercial purposes" did not the products resulting therefrom find favor with the general public.

CHANGES IN BUSINESS.

WILMINGTON, O.—George H. Moores formerly florist at the State Hospital Athens, O., for the past five years, has purchased the business of the Wilmington Floral Company here, and will continue same. He will be succeeded a Athens by George C. Kinnamon, who has been assistant florist at the Central Hospital at Columbus, O.

MONTROSE, COL.—Mrs. M. Mather has moved her flower store to Third street.

OAKES, N. D.—D. C. Walter is making arrangements to start in the greenhouse business here.

CANFIELD, O.—H. W. Fishel has accepted the position of manager of Smith's greenhouses on High street. He fills the vacancy caused by the death of A. A Mentzer.

American Peony Society.

A preliminary meeting of this Society was held in Brooklyn, N. Y., Wednesday afternoon, February 18. Letters were read from the gentlemen who had responded to the original call to form a society, all urging the organization of a society devoted exclusively to the peony interests. The meeting adjourned to reconvene Friday evening, February 20, when it is expected organization will be completed, officers elected and a plan of work outlined.

The C. S. A. and Weak-Necked Varieties.

Editor Florists' Exchange:

The unusually interesting deliberations of the Chrysanthemum Society of America, at its convention this year, and the many very important matters discussed, lead me to make some remarks as to what we think of the Society's decisions and opinions in Texas. The Texas flower shows have been stepping so faithfully in the footprints, as outlined by this organization, that we begin to think that the importance of the shows that we hold here entitle us to a voice in the discussion as well.

Regarding weak-necked varieties, many of them being the very best blooms we have, I am of the opinion that they should not be discarded from our exhibitions, on account of weak stems. Of course, if the bloom itself has no particular redeeming qualities, and a weak stem besides, it is then well enough to exclude it for something better. I must add here that weak stems are sometimes as much the fault of the grower as the nature of the plant in cultivation, and it is a well-known fact that the conditions under which a plant is grown, have much to do with whether it will materialize sturdy or spindling, when matured. I have found that a reasonably heavy soil, well fertilized, will grow plants generally more sturdy than a very light soil, though light and temperature cut some figure in the case as well. However, under any conditions we will always have some weak-necked chrysanthemums, and for some purposes they are superior to the stiff-stemmed ones, if the blooms are better. Thousands of these massive flowers are worn by both sexes at football games and on other public gatherings, and the weaker the stems the more pliable thev are to adjust to the coat for wearing, besides avoiding carrying around a great lot of unnecessary wood in the stem. In many other cases, people want these blooms for use, where the substance of the stems cuts no material figure.

Of course, when a flower stands alone in a vase at our exhibitions, on its general merits, first-class stems and foliage are very needful qualities. It is a very unsightly thing at a show to see a lot of massive blooms with stems arched over and bending down to the floor, and I think it the correct thing to place these in a class by themselves, and allow them to be wired up into shape and judged in competition among themselves, regardless of considering stem and foliage at all. This will necessitate arranging a new scale of points as distinct from the scale now in use, to be applied only to weak-stemmed varieties.

I do not favor the English method of exhibiting on boards, as having witnessed some samples of this style in England, I can see nothing attractive, or in its favor. There have, in my opinion, been entirely too many of our very best chrysanthemums discarded years ago on account of weak stems, and I hope there are yet some of the old stocks left, and that they are not so wholly extinct that we may never see them again. I have a scale of points formulated for weak-stemmed varieties, and in due time propose to offer it to the C. S. A. for consideration, with a view to its adoption as official, feeling, as I do, that there will be a place made in our exhibitions for these varieties.

Another point, which I have learned was not discussed at all, is the efficiency of some of our chrysanthemum judges to pass on the work set before them. In the first place. the scale of points is provided to equalize what the value of merit shall be in all localities, and in the hands of all judges alike, but the individual opinions of judges in the interpretation of these scales comes in so potently as to still make a wide difference in decisions, as the exhibits may be viewed differently by different men. I notice the reports of the judges on seedlings in different localities, and am amazed at the wide disparity in the scores given by them on identically the same varieties by the same grower, and, therefore, practically the same flowers. I am fully convinced that our art of growing chrysanthemums is far in advance of our art of judging them, and that no man should be considered qualified to judge any show in America until he has passed a satisfactory examination by the National Society, and is given a certificate as a qualified judge. And no show promoters should select a judge that does not bear the necessary qualifications. There are now far too many persons judging at our shows, who, doubtless, are good growers and understand flowers from a commercial standpoint, as regards the best way to profit by traffic in them, but their entire time is absorbed in this, and they have not the time to study the flower from an artistic point of view. If the Chrysanthemum Society of America would look into these matters, and appoint a corps of eligible judges on this basis, I am satisfied that all the Texas flower shows would work with them and use no other authorities for doing their judging.

S. J. MITCHELL.

Houston, Texas.

Lily of the Valley for Forcing.

Paper read before the Montreal Gardeners and Florists' Club, January 5, 1903, by Julius Jack.

As millions of pips of lily of the valley are used for forcing purposes in this country each Winter, I thought it opportune to give you my experience in growing these pips for home and export trade in the vicinity of Berlin, Germany.

The forcing pips take three years to arrive at maturity, and during this time they are not removed from the ground. At the end of the third year they are lifted with digging forks, the earth shaken out, and the clumps stored in cool sheds to be sorted. Women are mostly employed in this sorting process, at which, by long practice, they are very dexterous. In sorting three sizes are made. First; the forcing pip of commerce, which is tied into bundles of 25. Second; the leaf pip, and third, the runner.

If possible, the smaller sizes are planted again immediately; if not, they are stored for the Winter in pits three or four feet deep, in layers two inches thick, with an inch of earth between each layer. In this way they keep as fresh as if planted in the open ground.

The best time to plant is in October and November; but it is also largely done in the early Spring. "Runners," as the first year's growths are called, are the best for planting. To obtain the best results, a sandy soil, well manured and deeply cultivated, is necessary.

The pips grown in heavy clay are the largest; but will not force either as early or as well. Expert buyers are well aware of this, and the pips grown on sandy soil are eagerly sought.

The pips are planted in rows one foot apart, and from two to three inches between the pips, care being taken not to bend or crowd the roots. The tops are covered with about an inch of soil. The first year, a crop of vegetables, such as lettuce, kohl-rabi, or radishes, that can be harvested before the Summer, can be grown between the rows. After these are removed, it is well to give the ground a good top-dressing of hot-bed manure, to protect the young plants from the drying effects of sun and wind. As no new roots are made until August, very little foliage will appear the first year, but many young runners will be made. In the second and third years, the plants will occupy all the ground and all the cultivation necessary will be to keep them free from weeds.

I am of the opinion that lily of the valley can be grown in this section of Canada with as much success as in Germany, as the soil and climate seem to be identical; especially with that in the vicinity of Hamburg in Northern Germany, where the pips are grown with great success.

Wax Flowers & Designs . .. 208

BRIEFS FOR BUSY FLORISTS.

ASPARAGUS PLUMOSUS.—There is hardly any plant that is more useful to the average florist than Asparagus plumosus. In a young state the plants can be used for many different purposes, such as mixing among ferns in jardinieres, or for foliage effect in window boxes and urns; and when they are large enough they can be planted on a side bench, and the sprays used for cutting purposes; or they may be planted in a solid bed, and allowed to throw up strings which are always salable wherever cut flowers of any description are called for. To have a supply of plants coming along, seed should be sown now. Sow the seed in shallow flats or pans, cover lightly, and keep in one of the warm houses, say, where the temperature does not go below 60 degrees at night. As soon as the seedlings are large enough to handle, transplant them into other flats, and later, when they get to growing nicely, put them into pots of convenient size.

CALADIUMS.—As Summer decorative plants the fancy caladiums are always in order, and one never sees too many of them. This is the time to start the bulbs, and when growing them it should always be remembered that they only do well when treated as stove plants and kept in a warm house continually. If they receive a check after growth once gets started, they never seem to recuperate, though after the leaves are well developed they are not nearly so sensitive and can be used for decorative purposes without suffering any injury. To start the bulbs, pot them into small pots, and plunge them in soil, or sand, on a bench where there is a steady bottom heat.

After the first watering, give no more until the roots have begun to work, but keep the material in which they are plunged always moist. Pot them into larger sizes as fast as the roots demand, until a 5 or 6-inch sized pot is reached, after which a little weak liquid manure may be employed occasionally when the pots get full of roots.

The elephant ear caladium, C. esculentum, may also be started any time now, if good-sized plants are needed when the time for setting them outdoors arrives. These may be started in the ordinary shallow boxes (about three inches deep is the best size), then, when they begin to crowd each other in the boxes, they can be potted direct into 4 or 5-inch pots, and can be grown along in the ordinary greenhouse temperature.

AZALEAS.—To have these come in just right for Easter will require some care and watchfulness, and it is a question of retarding rather than forcing. A cool house is all right, and if any of the plants seem too forward at any time, a little shading should be used.

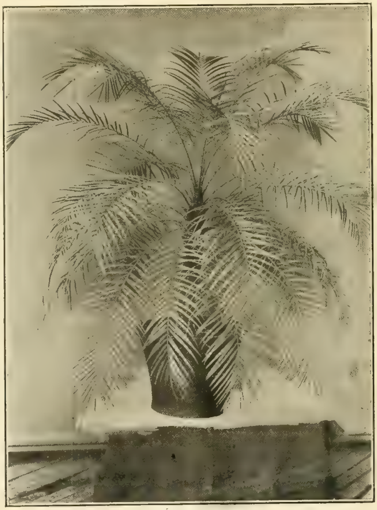
Palms.

Of the sixty or seventy kinds of palms cultivated under glass, not more than a dozen or so are considered commercially valuable; and these are grown in immense quantities to supply the great demand for them. I am speaking here of palms proper, not including such plants as pandanus, curculigo, dracaena, strelitzia, etc., which by some florists are sometimes classed as palms. Those kinds found to be most suitable for general use, and therefore raised in such numbers in large establishments exclusively devoted to this branch of the florists' business, are: Two varieties of kentia, one or two of latania, one of areca, one or two of cocos, one of cycas, two or three of phœnix, one or two of chamærops, and a few others.

The growing of palms does not require an abnormal degree of skill; indeed, it is easier to grow a fine palm than a fine carnation or a good geranium. But a careless, unreliable person in charge of a palm house can cause a deal of solid damage, amounting to the loss of hundreds of dollars in a very short space of time. For the benefit of beginners I will draw attention to some points of importance in the culture and management of these royal plants.

All palms are raised from seeds, excepting a few kinds which furnish side shoots around their base, which, if carefully taken off and potted, will grow on and make good plants, but never as good as those obtained from seed. It is of great importance to use only fresh newly arrived seeds, and to have a suitable place to start them in—a compartment over the pipes in the greenhouse, which can be covered with additional sash, in order to maintain a uniform moisture and a steady heat of from 77 to 82 degrees night and day. This bed, or box, is filled, either with very loose, porous soil of a spongy texture or, which is decidedly the best and proper material, with coarse sawdust, fresh from the mill. That with a pitchy odor is the best. It is not necessary to cut or otherwise mutilate the shell of the seeds before planting to facilitate germination. This, and the sawdust too old and fine, saturated with too much moisture, and the temperature under the sash kept too high, are the principal causes of failure.

A temperature much higher than 85 degrees kills the germ. The seeds of some kinds sprout in two or three weeks, while those of some others require a year and more.



PHŒNIX ROBELENI.

After the little grass-like plants have made a growth of an inch or two, they should be potted up into the smallest sized pots, taking care not to break off the seeds, which will adhere and which will furnish the only nourishment for quite a while yet. After the first shift into the next size pots, the roots will take hold of the soil, and the ligament, or thread-like fiber, connecting seed and plant, assumes a shriveled, dried-up appearance. This is the time to cut the seeds away. If left on longer, they become the starting point of a fungus, which very often also attacks the plantlets, destroying great numbers in a very short time. There is every reason to believe that this neglect has been the cause, in many instances, of the great losses experienced just at this period in the raising of young palm stock.

The means employed to induce a rapid growth are: a moist temperature of about 70 to 75 degrees, strict attention to cleanliness and order, copious but judicious sprinkling, and a frequent transplanting into pots, just a size larger, until the 4-inch pot is reached, the plants now displaying in their foliage the true character of a palm.

I advise retailers and growers with limited space to leave the raising of palms up to this size to those establishments that have made a specialty of the work. It is true, it is interesting, but on a small scale it is not a profitable undertaking, covering a long period of time, calling for close attention to details, and is only too often coupled with failure and disappointment.

The subsequent culture of palms in pots of from 4 to 6 or 8 inches differs materially from that just described for small stock. From now on, frequent transplanting is not advisable; once a year is sufficient for 4 and 5-inch stock; once every two years for those in 6 to 8-inch pots, and large specimens are left undisturbed for four or five years. A palm should have its pot completely filled with living roots before a shift is given.

Many of our palms are over-potted. The best time to re-pot is from March till August. In transplanting, see to it that the plant stands straight and exactly occupies the center of the new pot, and that the new soil is well firmed around the plant. In pots a few inches deeper than wide, better palms could be grown than in ordinary standards. A thorough cleaning and sponging of the leaves just before transplanting always pays. Use a stiff, rich soil, adding some bone-meal.

Thrifty plants, especially when root-bound, need a lot of water. Never, at any time, allow palms to get thoroughly dry. Their tops must be sprinkled at least once a day; oftener in the Summer.

It is essential to the welfare of palms grown under glass in our climate to guard against the scorching blasts of our hot and dry winds in Midsummer and early Autumn, by closing the ventilators of all well-shaded houses from 10 a. m. to 3 or 4 p. m. During the hot season full ventilation all night is resorted to. In the Winter, the shading on the glass ought not to be so heavy as it generally is found to be. A light coat of thin paint is sufficient, and none at all in the short days of Midwinter. See to it that every pane of glass over your palms is clear. A bent, warped, or blistered pane becomes a lens under the rays of the sun, and will ruin a high-priced palm in a few hours.

A temperature of 55 to 60 degrees is high enough for larger-sized palms during the Winter months; and for such as chamaerops, phoenix, and corypha, 45 to 50 degrees is all right. The less growth palms make in the Winter, and the more they are exposed to the full light at that time, the better will be the plants.

The sago palm (Cycas revoluta) makes its annual top growth all at one time, a complete set of new leaves accomplishing this feat in from ten to twenty days. During this time protect the plant from direct sunlight; frequently sprinkle the rapidly unfolding new crown and keep the roots well watered.

Palms want plenty of elbow-room; therefore, avoid crowding, and, if possible, in their arrangement aim at decorative effect; but so that every plant presents a full view to your customers.

As to insects, they should never appear on palms. Sprinkling keeps away red spider and thrips; mild fumigation, the aphis; and the worst pest of all, the scale, must be patiently and diligently hunted and painstakingly exterminated with toothbrush and whale-oil soap. Never keep in a palm house or near palms such scale-ridden plants as stephanotis, ivy, citrus, oleander, etc.

Palms are splendid parlor plants, and pre-eminent as decorative materials. If well-hardened off, they will stand a lot of handling and moving about, but are easily damaged if intrusted to the charge of careless people. Dry, or partly dried up, leaves at the base, and scratched, spotted, or broken ones at the top render a palm worthless. Large palms, with deep green leaves from the base clear up to the stately center, every one perfect and without a blemish, are a rare sight nowadays.

FRED. W. TIMME.

Phoenix Robeleui

The illustration herewith is of a well cultivated specimen of probably the most beautiful of all the known phœnix. Its habit is graceful and pleasing, the pinnæ being very narrow, closely resembling those of Cocos Weddeliana. The arching foliage, together with its robust constitution, make it a most desirable palm for decorative use.

Last year a large quantity of seed was imported, also a number of stems. Plants from seed (like many phœnix) are several years before they attain their true character, therefore some time will elapse before this palm can be procured at a reasonable figure. The stems sent home are much more preferable, after they become thoroughly established; they also break freely from the base. But extreme care must be exercised in severing them. The young growths have been detached from the plant figured. We have, however, a number of very bushy specimens in our St. Albans Nursery from the recent importation.

The first plants were sent to England 14 years ago and collected by Mr. Robelen and named in his honor. Several of the specimens imported at that time have found a home in the principal private collections in America, the one figured being at Madison, N. J., with D. W. James, Esq., and which Mr. Duckham, the gardener, has successfully exhibited at the New York shows.

A. DIMMOCK.

Ornamental Foliage Plants.

Paper read by John Thatcher, gardener to Edw. Le Boutillier, Esq., before Pennsylvania Horticultural Society, February 17, 1903.

Under this heading we have one of the most beautiful and varied class of plants cultivated under glass, which I am pleased to say is becoming more popular in this country. Let us hope the day is not far distant when every private establishment in the United States will have a stove or foliage plant house.

One might ask, what is more handsome than a well-grown croton, maranta or dracæna? Also to what advantage can they be used in the Summer time when garden parties, receptions, etc., are held at which the gardener does the decorating. They can be placed in shady places on the lawn and porches, also used in the mansion for the afternoon and evening, and they will not be in the least injured. I have heard many exclamations of surprise from ladies on seeing these plants so used, they remarking how much more beautiful the plants were than the common palms. During the Winter time anyone having any liking at all for plants can spend hours in a house of well-grown foliage plants.

The cultivation of this class of plants is very easy, providing one has a good ouse to grow them in. We have found hat a good rest, say from about the iddle of December to the middle of ebruary, is very beneficial. During hose two months we rarely have the mperature over 55 degrees during the ight. The plants are kept on the dry de, and it is very rarely that they er look worse after their rest. From hat time on we advance the temperaure a few degrees each week, so that the middle of March we try not to t it fall under 70 degrees. Air should given during all favorable weather; small crack each day during the inter will do a great amount of good sweetening up the atmosphere if nly admitted for ten minutes. As the ays get warmer more air will be required, but always given from the top. Ve never use the side ventilators, as used they dry up all the moisture. myself am a great one for getting air n early in the morning and closing up gain very early in the afternoon. I vill say here that the best plantsman I vas ever under would have full air on he stove plants by 8.30 a. m. during he Summer months, and would always ave it closed up again by 1 p. m. and he syringe going freely; and I can say ve were never far from the blue ribbon at the exhibitions on that class of lants.

Shading is a very important feature n the welfare of these plants. Some kinds, such as crotons or dracænas, will e benefited by a good amount of sun. Then take the maranta and alocasia, f given sun all the color will go. We lways try to get all plants that like he most sun on the sunniest side of he house, and all that do not like much un on the shadiest spot. For shading ve use white lead and coal oil, and we nly have to put it on once during the eason. But the ideal shading is some kind of canvas on rollers that can be ulled up and down with ropes and hen it will only have to be used on unny days. We commence shading bout the 1st of March.

About the 1st of March is also a good ime to commence potting. All plants should be examined; some will not require repotting, but I have found it a good plan to look to the drainage, as mperfect drainage is one of the most serious things in the cultivation. Those plants that do not require repotting should have some of the old soil taken off the top and a good top-dressing given with good rich soil. Others, perhaps, will want most of the old soil shaken off and then putting back in he same size pots, which should be quite clean and well drained.

Propagating is much the same as for all other plants; but to secure good stock of some varieties they should be mossed, and after well rooted, taken off the old plant; they will then want to be kept very close for a few weeks. Other varieties with creeping rhizomes, such as marantas, will have to be divided to increase their numbers.

I must say that many are not quite as particular as to soil as they should be. We use the old rotten sod, leaf mold, rotten rock sand, good dry cow manure and a small quantity of charcoal for nearly all varieties, but for marantas we add quite a portion of sphagnum moss. Peat we use very little of, as I consider good leaf mold far superior. I can say that some of the best dracænas I ever grew were grown n nothing but sphagnum moss and fed with Clay's fertilizer, which I like best of all, as it has given me more satisfaction than any other.

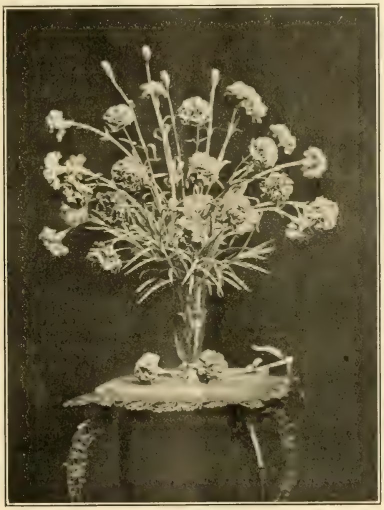
I will now give a list of twenty-five species of plants that we have in our collection. I will not mention any ferns or palms, which would make this paper too long, but which might be taken up at some future date. The list of plants is as follows:

Araucaria robusta compacta; Aglaonema costata pictum; Alocasias Sanderiana, nobilis, Watsonii, metallica, macrorhiza variegata; Ananassa variegata, Anthuriums Veitchii, Warocqueanum and chrystallinum; Costus igneus; Aralia Veitchii gracillima; Campylobotrys variegatus; Crotons Chelsonii, Johannis, superbus, Prince of Wales, Mrs. Dorman, Queen Victoria, Andreanum, Rothschild and Charmer; Curmeria Wallisii; Cyanophyllum magnificum; Dichorisandra musaica; Dieffenbachias Bausei, Baraquiniana, magnificum and marmorea; Dracænas amabilis, Charles Dissel. hybrida, Rothiana, Schultzii, Godseffiana, Goldieana, Doucetti, Lindeni, Sanderiana, Robinsoniana and Salmoneana, Heliconias aurea striata and rubricaulis; Marantas Makoyana, virginalis, Wallisii, Lindeni, rosea lineata, exemia and fasciata; Panax Victoria and Balfourii; Pandanus Veitchii, P. Baptistii, Phyllanthus rosea pictus, Phyllotænum Lindeni, Sanchezia nobilis variegata, Sphaerogyne, latifolia, Phrynium variegatum and Eranthemum pulchellum.

Carnation Indianapolis.

We send) u a photograph of our new pink carnation, Indianapolis. It is in its third year and we hope to disseminate it in the Spring of 1904. It is a cross between Mrs. F. Joost and Armazindy, but does not resemble either variety much. The color is a very bright, clear pink, that does not fade when the bloom ages. The stem is long and strong, and holds the bloom up well. The calyx nerve splits. It is a strong grower and an early and continuous bloomer. The best payer we have ever had on our place; it always brings top price. The size is large, 3 to 3¾ inches. The variety was certificated by the State Society of Indiana Florists on January 12, 1903.

BAUR & SMITH.



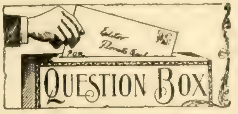
CARNATION INDIANAPOLIS.

Growers and Originators, Baur & Smith, Indianapolis.

The Coal Situation.

Editor Florists' Exchange:

In the January 10 issue of The Florists' Exchange Mr. E. A. Butler, of Niagara Falls, has an article concerning the burning of hard and soft coal together. He claims that they make the hottest and most durable fire. The hard coal that he speaks of is the very fine coal, or culm, to be used as a top dressing over the soft coal. This, to us, looks very feasible, for we have many times used this fine coal for top dressing over our hard coal. This fine coal, or culm, can be loaded on the cars here for about $1.00 per ton. If they can get plenty of soft coal, and cheaper than the large sizes of hard coal, it would seem that the florists' attention should be drawn toward this matter of using soft coal and culm together. The freight rate within a radius of a hundred miles from Scranton is about $1.50 per ton, that is, on prepared coal; it might be cheaper on this refuse matter. Each one could get the freight rate from his own station. This information may be of some use to florists in general. G. R. CLARK.



Forcing Deutzia Lemoinei.

(38) How long does it take to force Deutzia Lemoinei into bloom? Night temperature is 50 degrees. E. E. I.

—To force this deutzia into bloom at the temperature mentioned would require seven or eight weeks, so that to have the plants in flower for Easter they should be got into the greenhouse at once.

Peach Twigs Infested With San Jose Scale.

(44) Your letter of the 9th instant with specimens duly received. The peach twigs sent are infested with the San Jose scale (Aspidiotus perniciosus). The remedies for this pest are noted in circular No. 42 of this office, copy of which I enclose. I have merely to add to the information given in this circular that the lime, sulphur and salt wash, in the experience of this department and others during the last few years, has given much better satisfaction in the East than was the case with the earlier tests. We are, therefore, now recommending this wash more heartily than is the case in the circular referred to. L. O. HOWARD.

Government Entomologist.

Extract from Circular Referred To.

THE LIME, SULPHUR AND SALT WASH.

This is the invariable remedy for the San Jose scale in California and much of the Pacific Coast, and it is, under the conditions of climate obtaining in that region, undoubtedly very effective. Early experience with this wash in the East threw doubt on its efficiency as an insecticide under the climatic conditions prevailing throughout the eastern half of the United States. Some later experiments, however, have shown that wherever the weather conditions happen to be very favorable, duplicating in a measure the conditions on the Pacific Coast, this wash is effective in the East also. Unfortunately, the weather conditions cannot be relied on, and, therefore its use in the East is not recommended. But if a considerable period (ten days or two weeks) of bright dry weather could be assured after the treatment, it would probably give very satisfactory results when properly made and applied. It is a Winter application and is applied in January or February, or at any time prior to Spring growth. It may be prepared after the following formula: Unslaked lime, 30 pounds; sulphur, 20 pounds; salt, 15 pounds. Place all together in a barrel with 30 or 40 gallons of water and boil with steam for three or four hours. For use the mixture should be diluted to make 60 gallons of wash, and may be preferably applied at a high temperature. It may be made in smaller quantities by boiling over a fire, using the same proportion of ingredients. This wash is applied nearly every year or as often as the San Jose scale develops in any considerable numbers. It has the advantage rains retains its value as an insecticide of leaving a limy coating on the trees, which acts as a deterrent to the young scale lice, and where it is not washed by coating for some time, remaining in evidence on the trees for several months.

Carnations

(45) I enclose herewith some carnation cuttings. Will you be good enough to say what is the matter with them and what to do to bring them right? Also, whether the cuttings (shoots) for propagation are likely to inherit the disease, and whether or not they will outgrow it when planted out in the field? H. F. E.

—The carnations are very badly diseased, with what Professor Woods calls stigmanose. If all the growths are affected similarly to the ones sent for inspection, it would be folly to try to propagate from them, as not ten per cent. would root anyhow. We would recommend the purchasing of new stock rather than to attempt to propagate from such diseased plants. The disease itself comes from the punctures of aphis, and by carefully taking away affected shoots and keeping the plants rigorously clean and free from insects, the plants will eventually outgrow the trouble.

Gathering and Sowing Maple Seed.

(46) H. H. Norway maple seed is gathered in September and October, or it may be let fall from the tree and gathered up from the ground. Sow it at once, outdoors, broadcast, in beds three feet wide, covering the seeds with about ¾ inch of sandy soil. If Spring sowing would suit better, keep the seeds in a box, mixed with slightly damp soil all Winter, in a cool building, and sow as early in Spring as the ground will permit. Following either way, a good stand of seedlings should result.

J. M.

Clinging Vines.

(47) We are desirous of planting some quick-growing clinging vines. We have the side of a building 150 by about 10 feet, cemented stone wall. Above this wall is a weather-boarded frame warehouse, say 150 x 9. We wish vines to cover the whole as quickly as possible. Isn't there something that will cling to both wood and stone? We would like to plant different varieties to make a showy appearance. Would the trumpet vine be a good one? It is a south and east exposure.

H. S.

—The list of self-clinging vines is a somewhat limited one, but you would find these the proper sorts: Ampelopsis Veitchii, Japanese ivy; A virginica, Virginia creeper; Bignonia grandiflora, Chinese trumpet vine; B radicans, native trumpet vine; Decumaria barbara, Euonymus radicans and Hedera helix, English ivy. The Japanese ivy and Virginia creeper, with the two trumpet vines, are the best of the list. These cling either to stone or wood, and are fast growers. You might also try the English ivy. It should stand well at Kennett Square, Pa., as there are many ivy-clad houses in Philadelphia. Set out the plants as early as possible in Spring. J. M.

Vice-President S. A. F. for Eastern New York, Benjamin Hammond, Fishkill-on-Hudson, N. Y., has taken an admirable method of bringing the work of the society before his "constituents." He is distributing a neat pamphlet, bearing the photograph of President Burton, the aims of the society, and a reprint of the essay read by George E. Wienhœber at the Asheville Convention on "Marketing Cut Flowers at Retail." Mr. Hammond's example is worth following.

Some Noble Ferns of New Zealand.

New Zealand should be regarded as the ideal hunting ground of the fern enthusiast. It has been appropriately called "The Land of Ferns," as there are probably a greater number and variety of them within its limits than are to be found in any other country of equal area. The great length—almost 900 miles—in proportion to its width added to the height of some of its mountains, gives it a great range of climate. Considering the mildness of its climate and its beautiful scenery, New Zealand has so far not received the notice from tourists which is its due. The Government, however, has recently created a Department of Tourists and Health Resorts, and by the energetic action of the officers of this branch much useful information is now being circulated, with reference to the wonders of New Zealand scenery. The time is not far distant when we may expect a constant stream of people seeking change of air and scenery.

One of the chief attractions of visitors is the beautiful flora of these islands; and nothing is finer than the giant tree ferns—cyatheas and dicksonias. Those who have only seen a few specimens of these plants, in pots or tubs in greenhouses, have no idea of the noble, and yet at the same time wonderfully graceful appearance of a grove of these beautiful ferns. They sometimes grow among the native trees, but are often found almost alone in sheltered gullies and ravines, the ground at their base, and all the way up their trunks, being covered with the small varieties of ferns. Perhaps the variety which is the favorite with most visitors is the silver fern (Cyathea dealbata). The fronds of this fern have a beautiful silvery under-surface and are shiny green above. The stems, or trunks, are often 40 to 50 feet high, and the individual fronds twice as long as the tallest man is high. It forms a mass of fibrous roots and there is great vitality in this and in the trunk. It is not hard to remove from the bush and acclimatise in the garden or greenhouse. The magnificent effect seen when looking upwards among a grove of tall stems of this cyathea can scarcely be excelled by that of any other plant in the world.

Larger and more striking than the preceding is the black tree fern (Cyathea medullaris), so called from the jet black appearance of the trunk. This variety also grows in Victoria, but I understand it is now found there in quantity. It is a giant among ferns, often growing 60 feet in height, and sometimes far more. The Maoris use the trunk for their whares (or huts), and in their fighting days each village was surrounded by a ring fence of the trunks. The foliage is dark green and contrasts handsomely with the jet black trunks. This variety does not depend upon shelter (though, of course, it does not prefer a bleak spot), and it is therefore often planted upon lawns and among general borders here, giving a very light and graceful appearance to the surroundings.

There are several other varieties of these giant ferns, including Cyathea Cunninghami; the heritelias and dicksonias, but the foregoing are the most distinct and popular.

Hardly less well known, but more difficult to grow, is the lovely Prince of Wales fern (Todea superba), which takes its name from the striking resemblance the plant bears when in growth to the crest of the Crown Prince. This is not a giant variety and sometimes grows no more than 3 feet. In the young state this variety resembles T. hymenophylloides, but changes suddenly when the fronds assume the oblong stage. The older plants form great clumps of root with much vitality in them, and if taken up carefully are easily removed. I have known plants thrown under the benches in a fernery and left for months, and these when planted have done really well. It must, however, be kept (if in a house or conservatory) in a moist glass case. It will succeed very much better in a fernery. Exposure to a dry atmosphere even for a day will blacken the points of the lobes and spoil the appearance of the plant for some months. It succeeds well in a very shady situation, and I have seen it making a beautiful edging or border to a path in such a situation.

The cyatheas and todeas are often sent to Europe and other countries, and if carefully packed in sawdust or moss, almost invariably arrive in first-class order. The fronds are cut off before packing, and the stems, or trunks, are packed solid in strong cases and there is plenty of vitality in the masses of roots; they have no difficulty in starting forth fresh growths when planted.

Great numbers of these beautiful ferns have been destroyed by fire and in clearing away the bush to graze sheep upon; but, fortunately, there are still numbers left, and they are now being taken care of. Considering the number of Japanese fern roots which are annually imported into Europe and America, it is not surprising that the New Zealand varieties are also being inquired for. To any one interested in the subject, "The Ferns of New Zealand and Their Culture," by H. C. Field provides much interesting reading. It may be obtained from Griffen, Farren & Welsh, Charing Cross Road, London.

F. COOPER.

CARNATION MAGDALENE.
Growers Smith & Son, Cleveland, Ohio
Photo taken February 12, 1903

APPROACH TO OFFICE OF JOHN G. SHOLL, BURLINGTON, N. J.
An Object Lesson in Utilization of Waste Space.

House of Carnation "Magdalene."

The accompanying illustration shows a house of the seedling carnation Magdalene, formerly known and exhibited as 11-98. The photograph was taken February 12, 1903. In color the variety is a bright rose pink, very striking both at day and under artificial light. It has proved a great favorite among flower buyers. It is a wonderful producer, a rapid grower, of upright habit and is known by all that have seen it to be absolutely free of disease. This variety bids fair to become a standard sort, as it will be one of the most profitable carnations disseminated. Smith & Son, of Cleveland, O., are the originators, and they intend to introduce it to the trade next year. They will also exhibit it at the Brooklyn show.

G. W. S.

Bedding Plants.

The growing of bedding plants for the wholesale and local trade has become an important branch of commercial floriculture. Many firms have taken it up, and some devote large ranges of glass exclusively to this business. Our country still growing, empty lands and vacant lots all around us annually converted into new homes and gardens, and the love of flowers and the desire to beautify public and home grounds expanding, are reasons sufficient for the increase from year to year in the demand for good plants of all kinds, and justify the belief of many growers, that this increase will continue for many years to come. My own experience tends to confirm this opinion.

In the attempt to gratify this love for beautiful plants and flowers, comparatively large amounts of money are spent by rich and poor, but, unacquainted with the wants and habits of many varieties, and unguided by acquired experience or refined taste, the majority of buyers fail to produce those grand effects in combination and arrangement they had in view. The result is disappointment, complaint, and a probable loss of a customer or two the following season. Advice, even unsolicited, is often gladly accepted; and in cases like this a good deal of unpleasant consequence can be prevented by the intelligent plantsman and gardener by forestalling or correcting errors of that kind.

The introduction of valuable new varieties and improved forms of old-time favorites should be encouraged. They assist in overcoming that great sameness now prevailing, the endless unrelieved display of loud and glaring colors, so often indulged in.

These friendly hints are intended for the grower, whose business includes the laying out and planting of beds and borders under his supervision.

To enhance the good and combat the bad effects of competition, all good growers in this line should endeavor to cultivate and turn out first-class plants only; this policy after all being the only basis on which to found and build up a profitable business. The growing of certain kinds, which multiply quickly and are easy to raise, in large quantities, just because they are easily raised, should be avoided, when it is known that there is likely to be no call for them or at best only a limited demand. They soon take up a large amount of bench room, at a time when more profitable stock suffers for the want of it.

On the other hand, there are some sorts which are splendid bedders, giving satisfaction everywhere, but there are never enough of them to supply the demand, because they are somewhat difficult to start, and for that reason are either not grown at all or in small batches here and there. Plants of that character should be grown in greater numbers.

Our modern greenhouses, from 30 to 50 feet in width, and walls and ridge correspondingly high, as now erected on many places, and looked upon by many as innovations of doubtful value, I have found to be excellent for the growing of cut flowers, and certainly great improvements on old styles and methods. But surely they are not calculated to facilitate the growing of fine bedding plants. For work of that kind none equals in efficiency the old-fashioned even-span 10 or 12-foot house, with its one walk in the center and a high, convenient bench on each side, provided with abundant means for ventilation. A house like that offers many advantages. The plants stand close to the glass, receive the full light and all the fresh air needed, and are easily moved about—all points of importance in the growing of small, soft-wooded stock. Better plants can be grown in such a house than in cold frames.

A bench, with a number of heating pipes underneath, covered by a tile bottom, answers best for starting seeds and cuttings; and from now on every inch of it should be occupied in this way. For cuttings the bottom is covered, as usual, with three or four inches of sand, and the seed boxes, about 12 by 16 and 3 inches deep, are placed directly on the tiles. They are filled with mellow, fresh, moderately enriched soil, on which the seeds are sown, covered thinly, and, after being firmly pressed down, receive a good watering, applied with a fine "rose" watering can. They are then shaded, either by using muslin or paper for that purpose, but as soon as the little plants appear, the shading is removed, or these boxes are placed on some other bench, where the little seedlings receive all the air and light so essential to their welfare, thus making room for other boxes on the propagating bench. Never allow either cuttings or seedlings on this bench to become thoroughly dry.

To render a business like this profitable and to avoid losses, it is necessary to sow the seeds of the various kinds just at the right time, so as to have nice salable plants when Spring opens—plants not too small and backward, nor too far advanced, overgrown or stalky. Daisies and pansies are sown from August to December and the plants wintered outside. In January and February the seeds of many of the leading sorts are sown, such as salvia, petunia, begonia, lobelia, phlox, verbena, Vinca rosea, centaurea etc. In March we sow stocks, cobæa, ageratum, aster, gaillardia, dianthus, scabiosa, etc., and in the beginning of April it is time enough for zinnia, balsam, marigold, nasturtium, and a few others.

Petunias, lobelias, verbenas and salvias are propagated also by cuttings, and thus made bloom earlier, but are not as vigorous and reliable as plants of the same kinds, raised from seeds. Very fine seeds are not covered with soil, being merely pressed down. Of some of the kinds several sowings are made, to obtain the right sized plants all through Spring sales, such as asters, stocks, pansies, petunias, etc. The seeds of some kinds are invariably sown too thickly, especially those of lobelia and begonia; this, besides being a waste of seed, causes the plants to be forever afterward weak, spindly and worthless. Some little seedlings must be pricked off into other boxes as soon as they can be handled, or they will damp off; for instance, begonia, stock, Vinca rosea, and torenia.

Geraniums rooted in August and September make the most satisfactory bedding plants for Spring sales, but, the geranium being a plant that sells well at nearly all times of the year, a batch of nice cuttings from time to time helps to keep up that trade. The main lot of cuttings of such plants as coleus, double petunia, heliotrope, salvia, snapdragon, etc., should be struck from January to February. They all root easily, and on that account are often left too long in the sand. When their roots are from one-half to not more than one inch long, they should be potted up; also seedlings, when from one to two inches high, according to variety; 2 or 2½-inch pots are used. Most of the plants are sold out of this size pot; some out of 3-inch, and a great many, requiring several shifts, are offered for sale out of 4 and 5-inch pots, and a few kinds in good-sized clumps out of frames. Some growers, not easily converted from their primitive ideas, sell most of their bedding plants out of flats and shallow trays. This is a cheap way of doing business and helps to pull down prices of good stock.

Alternanthera and echeveria are multiplied by division, the first-named also from cuttings. Clumps of cannas and dahlias are cut into pieces and potted; and the same pot culture may be resorted to with gladiolus, tuberoses, and other Summer-flowering bulbs. If placed on a warm bench, they soon make good plants. Some growers allow their dahlia and canna roots to start first before they divide them, leaving one eye, or shoot, to each new plant. This is a good plan. FRED W. TIMME.

A Burlington (N. J.) Establishment.

I doubt if there is another florist in this country who gets more use out of a limited number of square feet than Councilman John G. Sholl, of Burlington, N. J. His greenhouses are what might be termed two-story houses. The ground floor is devoted to palms, ferns, rubber and other decorative plants, while at one end of the largest house are several large tanks for goldfish culture. Over these and underneath the main tables are other tables for Asparagus plumosus nanus and A. Sprengeri, so arranged that the air has free circulation about them and the sunlight shining down between the overhead benches falls on them the greater part of the day.

Supported by heavy posts and girders are the carnation benches, the main house holding between 5,000 and 6,000 plants. The south bench is 7 feet above the ground and the northern or uppermost bench is 5 feet higher. The intervening benches rise at corresponding intervals. Plank walks lead between the tables for the entire length of the house.

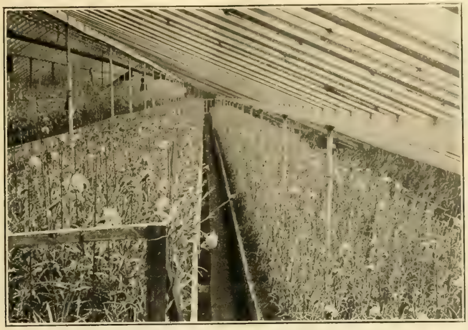
About the center of the plant are located the office and work rooms, boiler, storage room and stables. On the second floor above is another large carnation house, with the benches arranged in an order somewhat similar to that described above. The houses are heated by steam, a Mercer sectional boiler being used. The piping is so arranged, however that hot water may be used if desired.

The other houses are on the ground floor. The past Summer two new houses were erected, running north and south. They open into the main carnation house and were used for chrysanthemums. Just now they are filled with bedding stock, young chrysanthemums and young carnations.

A word about the carnations grown here. Mr. Sholl and his foreman Mr. Wells, take a great interest in the cultivation and improvement of this flower. Each year there is a large bed of seedlings for trial, which is always very interesting. The colors this year range from white, through all the pink and yellows, reds and variegations, and there is one, a purple, which shows up well under artificial light.

Five years ago, one, a pink, was selected which showed several good qualities, notably its freedom of bloom and pleasing shade, a little lighter than Mrs. Frances Joost, and having the beautiful sheen peculiar to the La France rose. This was No. 28 and known to the local trade as "Burlington Girl," until the present season, when Mr. Sholl decided he could offer it to the trade, and called it "Success," as he had found it the most successful variety he had grown. While it is not classed with the fancy flowers, the blooms are of good size, borne on stout stems, with good, strong calyx, and it is always in flower.

Among other seedlings that have been tried three years or more, but have not yet been disseminated, are two very good pinks, one, No. 45-90, a bright shade, with flower measuring 3 to 3½ inches; the other, No. 51-1, a lighter hue; and an excellent white, No. 37, of which, no doubt, we will hear more at a later date.



CARNATIONS MRS. FRANCES JOOST AND SUCCESS
Grown by John G. Sholl, Burlington, N. J.

Mr. Sholl has the best facilities for cultivating field-grown plants. A good-sized house is given over to rooting cuttings. The young plants are housed until April, when they are transplanted at the owner's farm, one of the richest in the vicinity, which lies about three miles from the city limits. Here the plants are worked weekly, with cultivator and hand-hoe, and are kept pinched back sufficiently to make the plants stocky and still not interfere with the growth. The houses are filled about September 1. Thousands of field-grown plants are supplied annually to Philadelphia wholesale houses.

JOHN G. SHOLL, BURLINGTON, N. J

Acetylene Light in Plant Growing.

The Acetylene Journal, of which Elias A. Long, well known in horticultural circles, is the editor, has procured considerable data relative to the use of acetylene gaslight in greenhouses and nurseries. Among the articles the Journal publishes is the one setting forth the experiments of Professor Rane, which appeared in our issue of December 27 last (p. 1481); also the following:

W. N. Dunklee "Windhurst," South Vernon, Vt., writes:

"I have used acetylene about two years for lighting greenhouses for cucumbers, residence, outbuildings, office, etc. I have thirty burners on machine and expense last year was only $27.40—about the cost of cleaning lamps. I do not have occasion to use any great amount of acetylene in the hothouse. Have experimented some by burning lights all night, and cannot discover so far any harm from acetylene, and believe if enough light were furnished it would be a benefit to vegetation."

Mr. C. DeWitt Wines, formerly of the Field Columbian Museum, Chicago, writes.

"From the chemical standpoint acetylene is not objectionable to plant life, but on the contrary, if there be a choice, is to be desired because its products of combustion, carbon-dioxide and water, are substances upon which plants feed.

"Acetylene in the flower industry would certainly be a long stride in the right direction for any one using artificial light. For matching colors the dry-goods men find acetylene perfectly satisfactory, and this means more than appears on first thought. Coal-gas light is not to be considered in color work, and the strongest argument against the electric light is its deceptive influence on color."

Messrs. C. W. Stuart & Co., nurserymen, Newark, N. Y., say:

"We have installed on our place three acetylene generators, one with twenty-five light capacity, another of fifty, and another of one hundred. The latter is used for illuminating our nursery cellars. All these machines are cared for by ordinary laborers. The machine in our nursery cellar is, at different times, in charge of any one of half a dozen workmen, and we don't remember having given instructions to any one, except one man. This goes to show that it certainly is not a difficult matter to attend to a properly made gas apparatus.

"The large machine is installed in an open cellar, no separate building is required. It is impossible to detect any odor from any of these machines at any time. In our packing cellar the light seems to give better satisfaction, if possible, than anywhere else, as it possesses peculiar qualities that make it carry into distant parts of the building, even when the surroundings are of some dark color that absorbs the light readily. Our lights are spaced twenty-five feet apart, and in the rows of trees where everything is dark color, this lights the space midway between the lights, so that the names of the varieties on the trees can be plainly read.

"Perhaps the best recommendation we can give to acetylene for nursery and plant men is the fact that we have had experience in using it, and continue to increase our plant."

To Clean a Boiler.

Editor Florists' Exchange:

I note with interest No. 43 under questions and answers in the last number of the Florists' Exchange, and it may be of some benefit to the craft if I relate my experience with soft coal, to the effect that since the 1st of December last I have been burning soft coal in a No. 5 Lord & Burnham boiler, and the surfaces of the boiler are today as clean as they ever have been since the boiler was put in service. The only objection I can see to the use of soft coal is the large amount of dust which settles on the flat surfaces of this type of boiler, making it necessary to clean very often. Now that anthracite coal is down in price, I asked the "boys" if I should get some for the No. 5. They replied that they preferred soft coal, even if hard were lower in price. Y.

New Haven, Conn.

The New Haven County Horticultural Society held its second annual banquet in the Tontine Hotel Tuesday, the 10th inst. It proved a great success. Delegates from the Hartford Florists' Club came down on a special train. Others came from Bridgeport. J. N. Champion acted as toastmaster. After the inner man had been well attended to, the toastmaster called on Mayor Studley, of New Haven, who welcomed the out-of-town guests in the name of the city. Mr. Amrhyn, president, gave a brief history of the society. W. J. Stewart, of Boston, spoke on the excessive express rates. Mr. Woodward presented Mr. Amrhyn with a gavel to keep us in order the rest of the evening. Remarks were also made by the Hartford and Bridgeport visitors.

WM. McLEAN ARDNER.

Newark, N. Y.

J. L. Quance, of this place, has just had a very unusual experience, and has not yet decided whether he is to be congratulated or not. Desiring a good well of water, a well was started; after reaching 26 feet, rock was struck, and after boring 90 feet a good supply of water was struck, and Mr. Quance was happy. But after several applications to his plants they began to flag and finally die. The blame for this was at once laid to the water. An analysis of it proved that it contained salt, magnesia, lime and soda. Chemists have pronounced it a high grade of litha water. The question is now which will pay the best, the "pump" or the greenhouses. H. Y.

CARNATIONS

American Carnation Society

TWELFTH ANNUAL MEETING

Brooklyn, N. Y.

February 19 and 20, 1903

FULL REPORT OF THE PROCEEDINGS AND THE EXHIBITION

The 12th annual meeting of the American Carnation Society convened in the City of Churches, as Brooklyn, N. Y., is familiarly termed, on Thursday and Friday, February 19 and 20, 1903, amid weather conditions that seem to be the common concomitant of this progressive body when it holds its yearly convention and exhibition. Three days previous to the opening of the proceedings the district had been bound in a heavy snow storm, with its wonted accompaniments of impeded railroad traffic rendering transportation slow and tedious, with belated trains and similar inconveniences as a consequence. Thursday morning, however, broke bright and clear, crisp and cold.

The meeting and exhibition this year were opened under the most favorable auspices, backed by the efforts of the Brooklyn Institute of Arts and Sciences, an organization without parallel in its class in America, if anywhere else in the world, along educational and progressive lines. Through the liberality of that body the exhibition halls, the art rooms and assembly hall, 174 Montague street, and necessary equipment thereof, were provided, while the Brooklyn Horticultural Society, composed of members of the local craft, carried the preparatory work to a culmination of the most satisfactory character.

Manager Plumb and his aides had everything in elegant shape prior to the opening, and the work of staging the exhibits was conducted in a smooth and satisfying manner.

A preliminary meeting of the Carnation Society was held on Thursday forenoon for the selection of judges, and the following gentlemen were chisen:

CLASSES A, B AND C: Messrs. W. N. Rudd, M. A. Patten and Charles H. Allen.

SPECIAL CLASSES: Messrs. S. J. Reuter, F. H. Lemon and Arthur Herrington.

CERTIFICATES: Messrs. William Scott, Richard Witterstatter and William Nicholson.

It was unfortunate that owing to the storm, and resulting railroad delays, must of the out-of-town exhibits arrived late, and some of them frozen, among the latter the blooms of W. N. Rudd, of Mt. Greenwood, Ill.

The visiting delegates began to arrive early in the week. The Pittsburg contingent reached New York on Tuesday, the Detroit delegation on Wednesday forenoon, and the Chicago coterie on Wednesday night.

First Day—Evening Session.

The first session of the Society was held in the Germania Club, 122 Schermerhorn street, Brooklyn, on Thursday evening, at seven o'clock. A large audience was present.

Address of Welcome.

Park Commissioner Richard Young made the address of welcome.

He said in part:

The Gentlemen of the Carnation Society: I, perhaps, might be expected to say something regarding the flower of which you are so proud, and which your pride and admiration have brought into such fame throughout the country, and especially that has brought to the attention of the people of this city the beautiful flower which you admire and represent, but unfortunately for me, I am not competent to speak on that subject. I, however, think that those who cultivate and propagate this flower do great work in the world. I do not speak to you as business men, because you left that behind in a great measure when you came to this city to present to its people the fruits of your labor. I think it is a very delightful thing to do this—a most commendable thing—I think it is a very profitable thing that you should come to Brooklyn with your great Carnation Exhibit. I do not know why you have not been here before, and especially am I a little surprised at this from the fact that those who have been foremost, in a large measure, in the cultivation of the carnation, were Brooklynites, or rather residents of Flatbush, which is a part of Brooklyn. I have known the man who might be called the Father of the Carnation development for many years. I refer to Chas. Zeller, and a fine specimen of the lover of flowers is he. I have known him for twenty-five years nearly, a man whose reputation as a Christian gentleman is above question, who always has been a devotee of his profession, such as I almost never knew. But he is become bent, has been for many years, as though he had been bending over flowers he cultivated until it became second nature to him. A man of refined culture in the profession, second to none I have met.

But I am not here to speak of individuals. I am here just for a few minutes to extend to you a hearty welcome to the City of Churches and the City of Flowers. I think I can say safely that, so far as I know, there is no city in this country that is as devoted to flowers as is the city of Brooklyn. I have no statistics, but I think that perhaps our people show their affection, their regard, for flowers as fully as in any other part of the country, in their lavish expenditure of money on flowers. The flower is recognized in Brooklyn from cradle to the grave, at all the feastings, festivals, the displays are becoming more lavish all the time. I have recently been to a funeral in this city and I was surprised. I think it took four carriages—and he was not a very widely known man—it took four carriages and a wagon to convey to the last resting place the tributes of his friends.

But I want to speak just a word of the city that welcomes you to-night as its representative in the Park Department—the city that stands, I think, third in population in this country—the borough of Brooklyn. This city contributes to the city of New York the brain, the sinew, stability and all those characteristics that go to make up a great manhood that is found in the home, because Brooklyn is essentially a city of homes. Of the 1,300,000 of people who have their abode here, a great majority go to the city across the river. They walk its streets, and trade in its marts, they go and come on its great highway, and walk back and forth across the river which separates the two cities. There is no measuring the influence of this borough compared to that across the river. When a man attains great wealth, so great that he outgrows the old home, he crosses the river and sometimes finds himself lonely, he comes back because the environments are so different. It is more like some of the older Western cities, where men know each other, where men prize each other for their merit. The city of Brooklyn—old, dear old Brooklyn, of which I have been a resident for more than thirty years, has grown from a comparatively small city to one of immense proportion. In my capacity as Park Commissioner I am compelled to visit all parts of it. I have driven thirty miles in one day around the parks of the Borough of Brooklyn and Queens (those two boroughs are indeed one—under the one control in the park work), and from Flushing to College Point, to Coney Island, and through the Heights, across almost to Rockaway, from Forest Park around to the park on the Bay Side—Bensonhurst, winding in and out among flowers and shrubs, and trees, the growth of cultivation and taste. There are those here who are no older than I who remember well when a park was said to be an extravagance. A man of culture and refinement came to me when I was pleading for a park at the seashore at Coney Island, yesterday. He said: "Is it not a question you should consider what this is to cost the people? Look at it from a financial standpoint." Never; I cannot do that in any narrow sense at all. I understand values as well as anybody. I say to you, gentlemen, there is no better value to be attained anywhere than by creating that which is beautiful, and that which benefits any city. The planting of flowers, trees, and shrubs, laying out of lawns, the cultivation and the bringing up of those things which nature has provided, elevates the people. Anything that elevates affords enjoyment to life and lifts people above sordid things, above the low things, is one of the greatest blessings that the world can give.

When the question came up of laying out Prospect Park here, and the dear old man Stranahan urged and begged, pleaded for the money to secure that park, many people said, "It is a waste of the public money." That park has cost the city over $10,000,000, perhaps $14,000,000 or $15,000,000, but to-day, looking at it from a sordid standpoint, looking at it from the standpoint of the man who considers only intrinsic value, that park to-day is worth, and would sell under the hammer for more than $20,000,000. Parks that have been bought for the poor, for the children in their mothers' arms, for the tired and weary of the world, have cost money and a great deal of it. But what better can man give to humanity than rest and peace and beauty? The old city of Brooklyn has grown in my day from a population of 300,000 to 1,300,000, and there is room within the borough for a population of not less than five millions, and then we might have nearly every house detached.

There is a broader and deeper requirement calls upon us, and that is, to provide for the people of the cities, resting places, and flower shows, to provide beautiful ferns and plants, shrubs and trees, for the masses. You are contributing widely to this. You may build more wisely than you think.

The man or woman must be very low, and I do not know that I have even seen or known a man or a woman who is not influenced by flowers. Gather a bunch of carnations and take it to a penitentiary, take it to a truant school, and every hand is stretched out, whether it be a man or woman. It is like a strain of music, there are very few, indeed, who are so lost to the beautiful things of the world that they will not reach out for flowers. Oh, what a beautiful thing it is when a flower show is over, when a fair is over, when a wedding is over, aye, sometimes, when a funeral is over, that the flowers be gathered and taken to the hospitals, taken to the prisons to give cheer to those who need it so much.

Now, my friends, I want to thank you earnestly for your coming to Brooklyn, your giving to Brooklyn the opportunity which you are presenting for one of the most beautiful things possible.

I think I can say with safety that those who know the carnation, those who study its development, are few, but before your exhibition is over the carnation will be more widely known, more highly appreciated than ever before. In cultivating the taste, in making your exhibits, it cannot be otherwise than that you reap the benefit. I mean, there may be thousands who will not, individually, but as a profession, as a trade, it cannot be otherwise than that you shall reap the reward that you deserve. To a man standing outside and knowing but little of flowers, the development of carnations, the development of chrysanthemums are wonders and amount almost to miracles. To think that man can add to the beauty of what has been created and intelligently go on step by step!

The commissioner then referred to a recent visit paid by him to Japan and spoke of the great floral wealth seen in that country, comparing its cheerful, joyous people with the more serious and earnest character of the Chinese, closing with the remark, "My friends, I didn't come here to talk to you; I came to welcome you to Brooklyn, and I do so with all my heart. (Loud applause.)

Response.

Wm. Scott, of Buffalo, responded on behalf of the American Carnation Society. He endorsed Park Commissioner Young's remarks on the educational value of parks.

The exhibition of carnations at Brooklyn was, in Mr. Scott's opinion, the equal of any the Society had ever given; the quality of the flowers was ahead of those shown on previous similar occasions. In closing, the speaker touched on the great growth of park and garden development in the United States in such centers as Brooklyn, Boston, New York Philadelphia and elsewhere. While the florist loves his business, he should not put too much commercialism into it, and "don't let us have any crape chasing, or anything of that sort, for God's sake, Amen." (Laughter and applause.)

Mr. Scott was given very short notice, indeed, to prepare his response, but he was, as at all times, equal to the occasion, and acquitted himself as is his wont, interspersing his remarks with a number of anecdotes that kept the audience in happy humor.

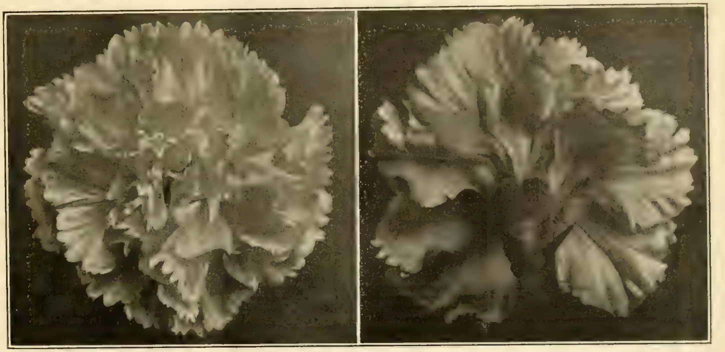
The Park Commissioner invited the delegates to visit Prospect Park. He characterized the palm house there as second to none he had ever seen connected with any park system, not excepting Bronx.

President Ward's Address.

President Charles Willis Ward, of Queens, N. Y., then delivered his address, as follows:

The twelfth annual convention of our prosperous, vigorous and useful Association convenes in the good old city of Brooklyn under most auspicious circumstances. Never during any period since our organization at Philadelphia, on October 15, 1891, have the results accomplished been more apparent. Our growth has been a healthy and steady one, each year adding substantial achievements and additional luster to our name. At each of our previous annual meetings it has almost seemed as if the enthusiastic interest in the carnation must sooner or later wane; nevertheless, at the present time the interest in the Divine Flower is noticeably greater than it was 12 months since, and there now seems to be no valid reason in sight why this interest should in any wise wane in the future.

The improvement in the carnation as to size, strength of stem, richness of color, and freedom of bloom, has kept even pace with the advancement of our Society. The size of the flower has practically reached that of the largest blooms that were produced by the English carnation culturists as early in the 19th century as 1830, at which time the English carnation seems to have reached the apex of its im-



Front View. **CARNATION GOVERNOR LOWNDES.** Back View.

H. Weber & Sons, Oakland, Md., Growers and Introducers.

provement and popularity. At that period carnation blooms nearly five inches in diameter, upon strong stems approaching four feet in length, were grown and exhibited. This was, however, done by developing the flower with artificial feeding, much in the same manner as the enormous chrysanthemums of the present day are grown. In addition to this it was necessary to bind up the calyces of the flowers and to split down the points to prevent bursting, as well as to extract surplus petals and arrange those remaining, in order to produce a shapely bloom. Then, too, the English carnation was produced during the early Summer months, a much easier cultural feat under English climatic conditions than is the production of our magnificent flowers in Midwinter.

Little need be said regarding cultural methods, the exhibition of seedlings, or the granting of certificates, as that ground has been thoroughly thrashed over by my predecessors. Sufficient to state, that from present appearances there has not been, nor will there be any future diminution of the enthusiastic experimental work and careful study being performed by the members of our Society.

It is with pleasure that I am able to announce the completion of the incorporation of our Society under the laws of the State of New York. The certificate of incorporation has been filed with the Secretary of State at Albany, and has been approved by him as well as by a Justice of the Supreme Court of the State of New York, and filed in the office of the County Clerk of Queens County. The Board of Directors has carefully compiled a constitution, which will be presented for consideration this evening, and to which I would invite your careful attention.

So far as my mental vision can now forecast the future, our skies seem to be clear, with but slight exception, and that exception is one which we may easily avoid. As our members are well aware, the general sentiment of our Association has from the beginning been in favor of maintaining the Carnation Society upon a substantial and independent basis; not binding ourselves in any partnerships, but maintaining such friendly attitudes toward other national floricultural and horticultural organizations as would secure for us a free and untrammeled field for the performance of our particular work.

A few years since, the agitation of a scheme to combine all American horticultural societies was begun by some leading members of the Society of American Florists, and while such combination seemed to be fraught with considerable danger to the interests of our Carnation Society, consideration of the subject was entered into in a broad and liberal spirit, with the view that if any feasible method could be devised whereby an association of these societies could be brought about upon a plan that would sufficiently safeguard the interests of our Society, I would favor such union, and would join my influence to bring it about, although aware at the time that many of our influential members were honestly and firmly opposed to such effort. Our esteemed fellow member and wise counsellor, W. N. Rudd, early pronounced the scheme a hopeless one, and strenuously advised its abandonment, a position which he has since consistently held.

While I am of the opinion that it would be possible to organize the various florists' associations into a representative body, upon lines similar to those upon which the Government of the United States is planned, nevertheless, after having served for two consecutive years as chairman of the committee on closer relations in the Society of American Florists, and having during this period endeavored to co-operate to the best of my ability in bringing about such union as would be acceptable to all of the interests involved, and at the same time to protect the future welfare of our Carnation Society, I was finally forced to the firm conclusion that the task is hopeless.

There are certain radical elements among the membership of the Society of American Florists who believe that that society should be given such a dominating position in the association as will eventually cripple the independent positions of the other associations, and until such radical element shall have changed, or have been overcome by the more conservative members, to the end that their views may become so modified as to enable them to consider the project in a spirit of greater liberality, recognizing that the Carnation, Chrysanthemum, Peony and other national horticultural associations may stand upon the same footing as that of the Society of American Florists, and be represented in the combined body according to the numerical strength of their membership, there would seem to be no practical hope of bringing about such a combination, and it would seem as if further agitation or discussion of this subject would lead only to misunderstandings, and perhaps feelings of animosity.

It is my belief, and I think the opinion of those most interested in the future welfare of the Carnation Society, that its present position, free and untrammeled by any copartnership with any other association, should be maintained. Partnerships between individuals are more or less dangerous, and partnerships between associations of individuals are equally so. Neither should be entered into unless it may be necessary for the protection of the contracting parties, or unless the benefits which appear to be certain to be secured are of sufficient magnitude to warrant the risks incurred. It would seem as if no such valid reason exists in this case, and consequently, that the subject should now be dismissed.

The Carnation Society has a necessary work to perform. Up to the present time it has performed that work well, without the assistance of other associations; in fact, in the face of more or less opposition it has demonstrated that it can carry on and maintain its work; and wherever it has held an annual convention it has been received with open arms, and, better still, bidden to come again.

The increase in the carnation industry of the country, which is undoubtedly a permanent one, will render it more or less easy as the years roll on to maintain our present status. The carnation is unquestionably second to no flower as a staple florists' commodity. The sale of carnations must always be classed upon the same basis as that of roses, and it would not be surprising if in the end the carnation would exceed the rose in commercial importance.

Before concluding I would particularly call your attention to the generous treatment which has been accorded our Society by the Brooklyn Institute of Arts and Sciences. It has been more than liberal in our entertainment; in fact, has exhibited a generosity which I believe has not been excelled by any other association that has charged itself with the entertainment of our Society, and I would especially request that a fitting resolution be passed, acknowledging the courtesies which we have received at their hands.

The work of the local florists, who organized the Brooklyn Horticultural Society for the purpose of contributing to our entertainment, has been none the less generous, and they, too, deserve commendation and praise at your hands.

The scarcity of fuel caused by the great coal strike has borne particularly heavy upon those florists who had not purchased their fuel supply early in the season, and the situation has been fraught with the greatest of danger. It would seem as if some plan ought to be worked out whereby such long-continued disputes between miners and operators may be rendered practically impossible. Having a somewhat intimate knowledge of the conditions prevailing in certain sections of the coal fields of the United States, I have given the subject some considerable thought, and must confess that I see no way in which the florists may be able to rectify the matter. It seems a proposition that must be worked out by the parties most interested in the operations; that is, the miners and the operators. Unless it is possible to evolve some plan of legislation that will prove efficacious in settling the disputes between the miner and his employer. Up to the present time no such plan seems to have been thoroughly thought out.

The increase in the express rates charged for the transportation of greenhouse products is not pleasant to contemplate, and if it is possible to secure a reduction of said rates to the former basis it should be done.

In the discussion following the president's address, Mr. Scott moved a vote of thanks to the Brooklyn Institute, and to the Brooklyn Horticultural Society, paying tribute to the excellent accommodation provided, and to the arrangements made for the work of the Carnation Society.

Secretary's Report.

Secretary Herr then read his report as follows:

Your secretary has his usual short report, having issued the proceedings of the Indianapolis meeting in due time, mailing the same to all paid-up members of the Society.

A preliminary premium list was issued in the Summer, the regular list February 1, and various circular letters during the year, all of which were mailed to the members. Any one not having received these items will please report to their Secretary, so that he may get their addresses corrected.

The membership for 1902 consisted of 267 paid-up members; lost during the year for non-payment of dues 22; new members gained previous to this meeting 19. This is a good showing as usually the gain aside from the meeting is very small.

Duplicate bills for dues that had been paid were issued to three of the members during the year, and your secretary publicly apologizes for this error. He also wants to thank the exhibitors for their careful attention to the details of their entries, as it considerably lessens his work at a very hard time of the year.

The 25-cent tax for vising the railroad certificates is an innovation of the railroads, and will be applicable to all tickets of this kind, so that our Society is in no way discriminated against in this respect.

That the Society is doing good, active work is shown by the fact that the postage used from March 2, 1902, to February 12, 1903, is $42.00.

ALBERT M. HERR, Secretary.

Treasurer's Report.

Treasurer F. E. Dorner's report showed the following items:

Receipts to the working fund during the year	$952.00
Paid out	887.79
Cash in bank to working fund	64.21
Permanent fund—balance as per report February 18, 1903	1,650.00
Cash received during the year to permanent fund	223.00

Messrs. Esler, Scott and Rudd were appointed an auditing committee to examine the treasurer's accounts.

The Carnation as a National Flower.

E. G. Gillett, of Cincinnati, chairman of the committee appointed on this matter last year, made a report in which he stated that Mr. Reynolds, the originator of the "Carnation League," had practically done what the Society's committee had set out to do. Mr. Altick, of Dayton, O., outlined the work accomplished by Mr. Reynolds, who had secured already for his League over ten millions of members. The sale of carnations on January 29, the birthday of President McKinley, had in Mr. Altick's opinion benefited the florist trade of America to the extent of from $75,000 to $150,000. He suggested that a committee of the Carnation Society be appointed to formulate a plan whereby each individual member could contribute voluntarily to the national McKinley Memorial Fund a share of the profits which "Carnation Day" had been instrumental in bringing about.

Mr. Scott endorsed the suggestion heartily. He advised against "killing the goose that lays the golden egg" by charging an exorbitant price for carnations on that day. Some dealers, he observed, had demanded a price of 50c. a flower, which, in his opinion, was a mistake.

Detroit, 1904.

An invitation to hold the next meeting and exhibition in Detroit, Mich., was extended by telegram from the local club, also by Mr. Beard, of that city, and accepted by the Society.

Nomination of Officers.

The following gentlemen were nominated as officers for the ensuing year:

President—George A. Rackham, Detroit, Mich.

Vice-President—James .Hartshorne, Joliet, Ill.

Secretary—Albert M. Herr, Lancaster, Pa.

Treasurer—Fred. E. Dorner, Lafayette, Ind.

Phil. Breitmeyer, of Detroit, declined the nomination for vice-president.

The New Constitution.

The proposed constitution governing the newly incorporated Society was then presented, and immediately instituted a lively discussion, involving legal and other technicalities. The motion made at Indianapolis last year called for a copy of the document being placed in the hands of each member thirty days prior to the date of the next annual meeting. Through an inadvertence this fact had been overlooked. Finally the difficulty was bridged over temporarily by a motion to accept the constitution as printed without discussion, and that it be taken up for consideration next year.

The date of the annual meeting being left blank in the constitution, an expression of opinion was asked from the members on this important subject.

It was conceded generally that the present date was a most inopportune one from a weather standpoint. Some members favored the first week in February; others the first week in March. The latter date had a strong supporter in Mr. Lemon, of Richmond, Ind., who advanced the statement that in both quantity and quality the exhibitions would be advantaged by being held on that date. Every man attending the shows would then see the new varieties which are not good Winter bloomers at that time, and will have ample opportunity to note their behavior in this respect at the following exhibition. New carnations were not bought on first sight or acquaintance, but were watched month after month, and, at times, year after year.

Mr. Rudd did not know of any scientific reason, or otherwise, why the first week in February or the last week in February should be selected, and there was no ground for belief that the existing weather conditions would continue. Buyers of new carnations generally crystallized their ideas as to whether they would buy the varieties after seeing them at the annual exhibition.

Mr. Scott thought a change of date was necessary, though science revealed nothing that would forecast the weather. The conditions for years had been disadvantageous, and something must be done to counteract these if possible. Messrs. Dailledouze, Peirce, Gillett and others also favored a change of date.

With the various opinions on the subject in their possession, the directors convened after adjournment of the regular session and selected as the date of the next annual meeting.

The First Wednesday in March.

Phil. Breitmeyer promised propitious weather in Detroit in 1904, no matter what the date chosen.

The meeting adjourned at 10.30 p.m.

Friday—Morning Session.

The delegates were tardy about getting down to business this morning, it being nearly noon before the session opened. The reports of the judges were read as under:

Judge's Report.

One hundred white—First, John N. May, Summit, N. J., with The Bride; second, S. J. Goddard.

One hundred light pink—First, Peter Fisher, with Enchantress; second, Albert Roper, with Fair Maid.

One hundred dark pink—First, John H. Taylor, with Mrs. Lawson; second, C. W. Ward, with Mrs. Lawson.

One hundred scarlet—First, M. A. Patten & Co., with J. H. Manley.

One hundred crimson—First, Chicago Carnation Company, with Harlowarden; no second.

One hundred yellow variegated—First, L. E. Marquisee, Syracuse, N. Y., with Sunbird; second, S. J. Goddard.

One hundred white variegated—First, Peter Fisher, with Mrs. W. A. Patten; no second.

Fifty white—First, L. E. Marquisee, with Albatross; second, Peter Fisher, with Governor Wolcott.

Fifty light pink—First, Peter Fisher, with Enchantress; second, C. W. Ward, with Alpine Glow.

Fifty dark pink—First, Patten & Co., with Mrs. Lawson; second, John H. Taylor, with Mrs. Lawson.

Fifty scarlet—No award.

Fifty crimson—First, C. W. Ward, with President Roosevelt; second, Chicago Carnation Company, with Harlowarden.

Fifty yellow variegated—First, L. E. Marquisee, with Sunbird; second, M. A. Patten & Co., with Dorothy Whitney.

Fifty white variegated—First, Patten & Co., with Mrs. M. A. Patten; no second.

Fifty any other color—First, C. W. Ward, with Sensation; no second.

Twenty-five white—First, L. E. Marquisee, with Albatross; second, Wm. Duckham, gardener to D. Willis James.

Twenty-five light pink—First, C. Besold, Mineola, with Gœthe; second, M. A. Patten & Co., with Fair Maid.

Twenty-five dark pink—First, John H. Taylor, with Mrs. Lawson; second, Wm. Duckham, same variety.

Twenty-five crimson—First, Wm. Duckham, with Gov. Roosevelt; second, Chicago Carnation Company, with Harlowarden.

Twenty-five yellow variegated—First, C. Besold, with Admiral Cervera; no second.

Twenty-five white variegated—First, Patten & Co., with Mrs. Patten; C. Warburton, Fall River, Mass., with Prosperity.

In Class D, for collection of ten nor more than fifteen varieties, C. W. Ward was first and Dailledouze Bros. second. There were no entries in the Class E for six varieties, but in Class F, which calls for not less than five nor more than eight varieties, C. Besold was first and Chas. Webber second. Peter Fisher won the silver cup for the best exhibit of 200 blooms, any variety or color, with Enchantress. For the best collection of single blooms, greatest variety and only one of a kind, all named or numbered, Dailledouze Bros. was first and C. W. Ward second.

There were no entries in the class for the Lord & Burnham prizes, which calls for varieties sent out prior to 1902.

For the best fifty blooms of Cressbrook, C. E. Dickerman, Dorchester, Mass., was the winner. Patten & Co. took first for fifty blooms of Gov. Wolcott, no second or third prizes being awarded. In Class L, where the prizes are the Lawson medals, the gold medal went to Peter Fisher, with Enchantress, the silver medal went to L. E. Marquisee with Flamingo, and the bronze medal went to C. W. Ward. The S. A. F. O. H. silver medal was won by L. E. Marquisee with Albatross, and the bronze medal was won by Peter Fisher, the competition in this class was for undisseminated varieties only.

For the best fifty blooms of Viola Allen, C. W. Ward was the winner. The prize in this class was a piece of art glass valued at $25, offered by Miss Viola Allen.

Certificates were granted Peter Fisher for Gov. Wolcott, L. E. Marquisee for Flamingo and Albatross, also for Sunbird, and H. Weber & Sons for Gov. Lowndes.

Election of Officers.

The gentlemen nominated last evening were duly elected to their respective offices.

Mr. Rackham returned thanks for the honor conferred, adding if hard and earnest work would make next year's convention a success that factor would not be lacking on his part.

Messrs. Wm. Scott and Peter Fisher were appointed a committee on Final Resolutions.

Sports.

Mr. Rudd called attention to the necessity of the Society taking cognizance of the registration of sports. He pointed out that of the various sports of Mrs. George M. Bradt now in existence one was named White Bradt, another had been registered as Mrs. Seward Webb. The variety Armazindy had sported all over the country, and was being sold under five different names to his knowledge, each variety offered being practically the same. Such a practice was bound to breed confusion and cause financial loss.

He also suggested that in regard to the registration of a new variety bearing the name of some individual the Society should not recognize such name unless the notice of registry was accompanied with the evidence of the permission of the party after whom the variety was called for that title to be used.

President Ward thought it would be a good thing, where sports were of such distinctive difference from the type, to characterize them as a white or pink sport of such and such variety, as the case might be, and that such title should be adhered to by growers with whom sports occurred if those sports were practically identical.

Mr. Dorner added that where a sport was known by two different names he always gave the synonyms in referring to it, as, for example, Red Bradt (Chicago).

A motion was eventually carried to appoint a committee of two to act in conjunction with the secretary as a nomenclature committee to supervise the work of registration and naming.

A further motion was passed that this committee, in the case of sports, only register the names supplied provisionally until the varieties have been submitted to the Society at its annual meeting for determination as to whether the sports registered were distinct enough to be considered worthy of a separate name.

Mr. Herrington remarked that the Society could place no embargo on naming; and registration established priority. If duplications of varieties were discovered the nomenclature committee of the Society could put the matter right.

Mr. Wallace pointed out that priority of name was held by the Paris Conference on nomenclature to be established by publication in any periodical or catalogue distributed among readers or clients.

The preparation of the premium list for next year's exhibition was left in the hands of the Board of Directors.

After a discussion on the transference of the property funds, etc., of the old organization to the newly incorporated body, the Society adjourned to reconvene in Detroit the first Wednesday in March, 1904.

The Exhibition.

The twelfth annual exhibition of the American Carnation Society, held in the Institute of Arts and Sciences, Brooklyn, N. Y., on Thursday and Friday of this week, was a grand success, viewed from every standpoint. The attendance of members was fully up to the average, in spite of the extreme cold weather that prevailed; and the quality of the carnations exhibited was better than had been seen at any previous show of the society.

A word or two about the exhibition hall may not be out of place. Strictly speaking, there were two halls connected by a corridor. In one were long, narrow, tables for the staging of exhibits, and in the other, only round tables were used. The side walls had been hung with white cheese cloth and trimmed with Southern smilax, and groups of evergreens in pots and tubs were fittingly arranged in the corners and along the sides; the evergreens coming from the nursery department of C. W. Ward. Chas. Zeller & Son furnished two or three groups of palms that made a splendid setting for the center space in one of the rooms, and a few specimen plants of Nephrolepis Piersoni, from F. R. Pierson, Tarrytown, N. Y., also acted as a foil to the abundance of blossoms.

Henry A. Dreer Co. had an exhibit of Pandanus Sanderi. W. H. Siebrecht, Astoria, L. I., filled a side table with bulbous flowers which received much praise for their general good quality. Thomas Roland, Nahant, Mass., brought on some elegant plants of Begonia Gloire de Lorraine; and the Little South Floral Company, of Natick, Mass., staged some of the finest plants of Cyclamen ever seen here, the size of some of the flowers being truly remarkable. Reed & Keller showed a full line of florists' supplies, including their new extension pot holder. E. Hippard, Youngstown, O., exhibited a section of his new Duplex iron gutter. J. H. Broxey, Dayton, O., had samples of his new carnation support, which he is introducing to the trade. This is a wire support, with rings that can be raised or lowered at will, and the rings can also be made larger or smaller, according to the size of the plant.

Lion & Wertheimer, New York, displayed a full line of florists' ribbons. Thus all the space available for trade exhibits was occupied

The carnations staged by the different exhibitors were superb, and the men who had the judging to do had a difficult task before them. The storm that prevailed caused shipments to arrive late, and matters were thus somewhat delayed; in fact, the flowers of the J. D. Thompson Carnation Company arrived too late for competition, while those of W. N. Rudd came frozen and spoiled.

The Chicago Carnation Company had in their display Harlowarden, Marshall Field, Mrs. Potter Palmer, Mrs. E. A. Nelson, Mrs. Higinbotham and Her Majesty; and all the flowers showed up to good advantage.

L. E. Marquisee, Syracuse, N. Y., brought down Flamingo, a fine new scarlet; Albatross, a pure white, and Sunbird, a yellow variegated variety.

Jerome A. Suydam, of Flatbush, N. Y., had on view a set of seedlings. Among them was a white variety of such size and form that placed it in the front rank; and had it been staged for competition it would surely have been a winner.

A pink seedling from Florham Farms, Madison, N. J., was much admired, and will, perhaps, be heard from later. Fair Harvard, from W. G. Saltford, Poughkeepsie, was on exhibition, as was also the variety President McKinley, from E. T. Grave, Richmond, Ind.

Besides the varieties staged in the seedling classes, Dailledouze Bros. made a splendid exhibit of Lorna, Mrs. G. M. Bradt, Prosperity, Alice Roosevelt, Genevieve Lord, Eldorado, Governor Roosevelt, Mrs. Thomas W. Lawson, Fair Maid, White Mrs. Bradt, Red Mrs. Bradt, Dorothy Whitney, Fragrance, and Harry Fenn.

C. W. Ward had an extensive exhibit which included Mrs. Theodore Roosevelt, Governor Roosevelt, Golden Beauty, Mrs. John A. Thayer (a light pink), Prosperity, Creole Beauty, Flame, Lorna. Ethel Ward, Governor Bliss, Octoroon, Golden Eagle, Judge Hinsdale, Alpine Glow and Mackinac, a fine pure white.

S. J. Goddard, Framingham, Mass., showed a vase of the new white carnation, The Queen, a good three-inch flower, which seems to be a good commercial kind. These were not staged for competition.

Peter Fisher brought on some fine blooms. He showed Enchantress, some measuring three and three-quarter inches; Mrs. M. A. Patten, Nelson Fisher, Governor Wolcott and Boston Market

H. Weber & Son, Oakland, Md., staged one variety, and that only for exhibition purposes. The variety was Governor Lowndes, a white, finely formed flower and borne on good long stems.

Seven varieties competed for the Lawson medal, which shows the keen desire among the experts to win this coveted prize. The varieties were White Mrs. Bradt, Mrs. John Thayer, Flamingo, Enchantress, Mrs. Theodore Roosevelt, Adonis and President Roosevelt.

The flowers from the J. D. Thompson Co., Joliet, Ill., were staged, however, even though the judges could not pass upon them, and some of their bunches were extremely fine. Among them were Estelle E. A. Nelson Enchantress, Mrs. Thos. W. Lawson, etc.

There were several other exhibitors, but as the judges' awards will be found appended, no mention here is necessary.

On the evening given up to the members of the Brooklyn Institute the exhibition hall was filled with a gay and brilliant throng of the city's elite. The show was much enjoyed, and expressions were heard on all sides that such an exhibition should be an annual affair.

The Banquet.

On Friday evening, February 20, the delegates were the guests of the Brooklyn Horticultural Society at a banquet given in the Germania Club, 120 Schermerhorn street. Ex-Lieutenant Governor Timothy L. Woodruff presided, and acted as toastmaster. Following is a list of the toasts and those who responded thereto: "Flowers and Their Relation to Art," Park Commissioner Richard Young; "The Influence of the Carnation and Other Flowers Upon the Ethical Side of Life," Robert Craig, Philadelphia; "Old-Fashioned Flowers," Ex-Park Commissioner Brower, of Brooklyn; "The Humorous Side of a Florist's Life," L. E. Marquisee, Syracuse, N. Y.; "The City Beautiful," President Healy, Brooklyn Institute; "Queen Flora's Treasure House," Wm. Scott, of Buffalo; "Floriculture as a Profession," A. Herrington, President Chrysanthemum Society of America; "The Advantages of Horticultural Organization," by Frank B. Lown, of Poughkeepsie, N. Y.; "The Carnation's Conquest of the West," Fred. Lemon, of Richmond, Ind.

Some of Those in Attendance.

Many outside visitors were in the city to see the exhibition. David Rust, A. B. Cartledge and S. Pennock, Philadelphia; Mr. Pettigrew, from Boston, and hosts of others. A full list of members who registered is as follows:

Albert M. Herr, Lancaster, Pa.; Fred. Dorner, Lafayette, Ind.; W. N. Rudd, Chicago, Ill.; Geo. W. Goldner, West Hoboken, N. J.; E. J. Johnstone, Providence, R. I.; F. A. Blake, Rochdale, Mass.; T. J. Johnstone, Providence, R. I.; S. J. Goddard, Framingham, Mass.; John Barr, South Natick, Mass.; Wm. Swayne, Kennett Square, Pa.; Geo. S. Gibson, Hartford, Conn.; O. R. Morgan, Glastonburg, Conn.; W. R. Shelmire, Philadelphia, Pa.; S. J. Reuter,. Westerly, R. I.; S. S. Skidelsky, Philadelphia, Pa.; Wm. Spillsbury, Woburn, Mass.; A. E. Batley, Maynard, Mass.; Geo. A. Rackham, Detroit, Mich.; Peter Fisher, Ellis, Mass.; J. B. Swayne, Kennett Square, Pa.; Gust H. Taepke, Detroit, Mich.; Martin Reukauf, Philadelphia, Pa.; E. Hippard, Youngstown, Ohio; O. N. Naumsaun, Cleveland, Ohio; Elisha Pierce, Waltham, Mass.; Anton Then, Chicago, Ill.; F. Felke, Milwaukee, Wis.; R. W. Wynings, Stafford Springs, Conn.; P. Change, Worcester, Mass.; W. J. Stewart, Boston, Mass.; W. A. Rowlands, Utica, N. Y.; Wallace R. Pierson, Cromwell, Conn.; L. D. Bryant, North Cambridge, Mass.; G. L. Grant, Chicago, Ill.; F. H. Mitchell, Waterville, Me.; Walter Mott, Jamestown, N. J.; C. T. Guenther, Hamburg, N. Y.; E. L. Kronin, Jr., Allentown, Pa.; T. P. Langhans, Pittsburg, Pa.; Herman Baartman, Sassenheim, Holland; Daniel Hipps, Boston, Mass.; Chas. T. Darling, Stonybrook, N. Y.; W. K. Partridge, Cincinnati, Ohio; W. P. Craig, Philadelphia, Pa.; J. L. Dillon, Bloomsburg, Pa.; A. H. Funnell, Huntingdon, N. Y.; John Walker, Youngstown, Ohio; Fred. Burki, Bellevue, Pa.; John L. Wyland, DeHaven, Pa.; Geo. E. Buxton, Nashua, N. H.; John Murchie, Sharon, Pa.; Ed. H. Murchie, Sharon, Pa.; Wm. F. Kasting, Buffalo, N. Y.; W. O. Sullivan, Detroit, Mich.; John G. Esler, Saddle River, N. J.; A. Herrington, Madison, N. J.; Wm. Duckham, Madison, N. J.; Chas. E. Neale, Worcester, Mass.; Wm. Nicholson, Framingham, Mass.; R. Witterstætter, Cincinnati, Ohio; H. Mitchell, Philadelphia, Pa.; Geo. Smith, Manchester, Vt.; W. H. Vance, Wilmington, Del.; Chas. P. Dudley, Parkersburg, W. Va.; M. A. Patten, Tewkesbury, Mass.; E. J. Taylor, Southport, Conn.; Carl Hagenburger, Mentor, Ohio; Richard Vincent, Jr., Baltimore, Md.; W. J. Palmer, Buffalo, N. Y.; Wm. Gammage, London, Ont.; J. H. Dunlop, Toronto, Ont.; Edward Dale, Brampton, Ont.; John E. Haines, Bethlehem, Pa.; Robt. W. King, Toronto, Ont.; Samuel Symes, Norwalk, Conn.; H. F. Littlefield, Worcester, Mass.; F. X. Millman, Cumberland, Md.; J. Fuller, Fitchburg, Mass.; J. R. Fotheringham, Tarrytown, N. Y.; L. E. Small, Tewkesbury, Mass.; John B. Rudy, Elmira, N. Y.; Theo. E. Edwards, Bridgeton, N. J.; Geo. H. Traendly, Rowayton, Conn.; B. N. Keptein, Sassenheim, Holland; Jas. S. Wilson, Western Springs, Ill.; John Merkel, Mentor, Ohio; W. F. Larch, Carrick, Pa.; Ed. H. Blind, Westview, Pa.; Walter Hintsel, Westview, Pa.; Guy Baty, East Cleveland, Ohio; Phillip J. Foley, Chicago, Ill.; W. A. Pierce, Westchester, N. Y.; J. M. Palmer, Kennett Square, Pa.; E. C. Marshall, Kennett Square, Pa.; H. P. Rohrer, Lancaster, Pa.; Vernon D. Grave, Richmond, Ind.; William Sim, Cliftondale, Mass.; L. E. Wood, Fishkill, N. Y.; J. D. Cockcroft, Northport, N. Y.; A. O. Grasse, Syracuse, N. Y.; Geo. R. Geiger, Nazareth, Pa.; Phillip B. Welch, Baltimore, Md.; John J. Perry, Baltimore, Md.; J. O. Bauer, Baltimore, Md.; E. S. Beard, Detroit, Mich.; F. E. Dorner, Jr., Lafayette, Ind.; Theo. A. Dorner, Lafayette, Ind.; E. C. Ludwig, Pittsburg, Pa.; Wm. Lehr, Baltimore, Md.; Chas. E. Dickinson, Dorchester, Mass.; H. A. Cook, Shrewsbury, Mass.; Louis J. Reuter, Westerly, R. I.

Eighteen ladies who were among the visitors present, were tendered a dinner Friday evening, followed by a theatre party at the Columbia Theatre.

President-Elect George A. Rackham.

George A. Rackman, of Detroit, Mich., the newly elected president of the American Carnation Society, was born in Cleveland, O., in 1851, and removed to Detroit in 1879. He received his education in the schools of Mt. Clemens, Mich., and for some time taught school in a rural district near his home. In early life he worked as a lumberman, but having been blessed with an innate love of flowers and plants, he subsequently turned his attention to their cultivation in a commercial way, starting in business as a florist some thirteen years ago.

The carnation has been an object of Mr. Rackham's especial care during the whole of his career in the business. Like other progressive specialists in this line, he saw the advantage of affiliating with the American Carnation Society, which body he joined at the Cincinnati meeting in 1897; and he has been a regular attendant at the annual gatherings of the society ever since.

Mr. Rackham has worked hard to get the A. C. S. to visit Detroit and his efforts have now culminated in success. He was the prime mover in securing the S. A. F. (of which he is also a member) for his home city, and the exceedingly enjoyable manner in which the delegates were entertained and the success of that convention generally were largely owing to Mr. Rackham's individual efforts.

GEORGE A. RACKHAM, OF DETROIT,
President-Elect American Carnation Society.

An energetic worker, an enthusiast in whatever he sets out to do, a most obliging and modest man, the affairs of the American Carnation Society are safe in his hands, and under his able direction the status and influence of the society will be well maintained.

Mr. Rackham is held in high esteem by his local associates, who having the utmost confidence in his executive ability and appreciating his many other good qualities, elected him to the presidency of the Detroit Florists' Club, which position he has filled with much acceptance and benefit to that body. He is a Knight Templar and a member of other fraternal societies.

Vice-President Elect James Hartshorne.

James Hartshorne was born in Shropshire, England, April 8, 1868. Coming to the United States in 1888, he first located at the "Hub," shortly after becoming second foreman in the gardens of the late Charles Burley, Esq., of Exeter, N. H.

The horticultural development of the World's Fair led him to strike out for Chicago in 1892, with the thought of finding employment in that section. Instead of taking part in this, however, Mr. John C. Ure, then having considerable to do with exposition matters, more particularly those connected with the Illinois and other State buildings and grounds, engaged Mr. Hartshorne to run his greenhouses out at Argyle Park. Modest, as times go now, as was that establishment then, it was here the young man first made his mark and began to show the metal that was in him.

Old-fashioned low span roof houses, each heated by a separate boiler, with the assistance of the old style brick flue, was hardly an up-to-date institution to say the least, by means of which to make one's mark as a carnation grower; but he did, and that quickly, both in the public market and at the Chicago Fall shows; in 1896, for example, carrying of some twenty premiums for carnations.

The turning point in Mr. Hartshorne's life seems to have come in 1897, when we hear of him as being engaged by H. N. Higinbotham, Esq., of Chicago, as gardener, both at his city residence and his delightful country home at Joliet, Ill. The next step, in the following year, was the formation of the now famed Chicago Carnation Co., of Joliet, with Mr. Hartshorne as manager. Here, at Joliet, is without doubt, one of the most perfect plants, each devoted exclusively to the divine flower, that this section can show, if not unique in the whole country. Although the company was not started until the Spring of 1898, yet through the early purchase of stock, which was planted in the open ground to fill the houses yet to be built, the very first Winter (1898-1899) the place became noted for fancy flowers, which easily found a market with profit satisfactory to the company.

JAMES HARTSHORNE,
Vice-President-Elect A. C .S.

To further demonstrate the energy in the man, he is now planting ten acres of pæonias, in some 300 varieties, gathered from all over the world; some of them at very high prices, the rarest and choicest that could be obtained. As the object of the new company is the sale of cut flowers as well as plants, it follows that a large percentage of the varieties are naturally those known to be best adapted for cut flower use.

Like all progressive men, Mr. Hartshorne believes in association among his compeers; he early joined the Chicago Florists' Club, taking active part in its debates, and has been its president. He is also a member of the Chicago American Florists, the American Chrysanthemum Society, the American Carnation Society, and the American Association of Nurserymen. He is also a Master Mason.

Beautification of Waste Places.

Address Delivered at the Annual Meeting of the State Horticultural Association, Harrisburg, Pa., by S. Mendelson Meehan, Editor of Floral Life and Vice-President of Thomas Meehan & Sons, Inc., Germantown, Philadelphia, Pa.

It is my intention to at once dispel any impression you may have that I am going into the mysteries of landscape gardening, to name a lot of rules you should follow, and give other specific advice; or that I intend naming lists of desirable plants, describing their merits. Such things are details that should be worked out to fit the individual needs. But rather I wish to reveal some common opportunities by which we may brighten our lives through the medium of Dame Nature and as students of ornamental plant life.

There is no question but that all country and suburban places have their waste places, waste because they have either had all the beauty crowded out of them or have been utterly neglected.

A dwelling place should be made a home in every sense of the word. The grounds immediately surrounding the house, and beyond, should be made attractive and lovely to those who live right on the spot; but then we must think of others, too. We want to please our visitors, friends and neighbors, and, in fact, everyone that passes by. It is rightly a matter for personal pride that our surroundings be made to speak our appreciation for the beauties of Nature. Therefore, we shall be careful to view whatever plans we may make from two points.

Have you ever stopped to consider how badly proportioned our average country places are, having in mind those where farming, fruit growing or similar rural work is carried on? Fortunate indeed is the 50 or 100-acre place that has half an acre of home grounds about the house. Even there the chickens and other animals are frequently allowed to hold possession, to the destruction of any pretty gardening plans.

In comparison with the owner of city property, what a much better opportunity has the countryman and fruit grower, with an abundance of low-priced land, to have a beautiful garden home at a little expense, and accompanied with greater personal interest.

But few country homes exist where from one to five acres could not be set aside for lawn and flower gardens. "It would not pay," I hear someone say. Perhaps the balance in dollars and cents would be a little less, but is the pleasure and comfort to count for nothing? If the financial results are to be considered above everything else, and the loss of that much ground is serious, then the owner must be working the remainder of his property on very close margins, and his methods need investigating.

A good expanse of lawn may be considered one of the chief aims, because when that is set apart, it offers many opportunities for development in detail and striking effects. Above all, set out with the determination that it is to be a good lawn of good grass. To be half-hearted in home-making is to create waste places, and those we have no use for.

Decide to have, if possible, a flower garden—not simply flower beds and borders around the grounds, but something of an enclosure into which one may pass, and feel that he is in a different atmosphere; where flowers are on every side inviting admiration and interest. I know of no phase of gardening that is more delightful, invigorating and care-destroying than that which relates to hardy flowers.

A carefully selected assortment gives a profusion of flowers all the year, from the very earliest Spring days, when some will open their adventurous blossoms almost from out the snow, to the time when some will defy the lighter frosts of Autumn.

A rose garden, which may be made a section of a general flower garden, is much more pleasing than where the roses are simply scattered here and there. They are not fitted for promiscuous planting, and always respond better to definite treatment.

If a fine lawn offers opportunities for detailed development, equally so does the flower garden. There may be bowers, turf walks and rustic seats; trellises, vine-covered archways, and what not. Utility need not be dismissed entirely, for some of the handsomest flower gardens are merely generous borders to vegetable patches. Or where the owner is concerned in marketing, cut flowers offer opportunities for quite a neat recompense for labor and expenditures.

Would not this idea also add to the various proffered solutions of the farm question, How shall we keep the boys on the farm?

Having determined to beautify our home grounds, to have fine lawns well planted, a flower garden and handsome shade and ornamental trees, what is the best course to pursue in securing them.

Right here let me say that unless the ideas are well thought out and right plans laid, it would be most unsatisfactory to do anything unusual. To plant grounds for ornamental effect and permanency requires just as much and more care and intelligent judgment as to plan out a large fruit orchard or piece of farm land. A good knowledge of plants and their characters must be had. The effect they will produce in position both at the start and in the future must be recognized.

The smallest place should have a plan made for it, put roughly on paper, or kept well in the head if not intricate; the former method is much the more satisfactory. Make this plan as complete as possible. Allow for every little embellishment, though the minor details may be subject to change when the work is taken up.

The economy of a plan is in its perfection. Mistakes are not so likely to occur, and everything is located in harmony. Above all, such a plan can be carried out one part at a time without danger of having something interfere with some idea that might otherwise have presented itself at a future time. The lawn could be started the first year, and a few trees planted as desired about the house and at the driveway entrance, with perhaps sufficient properly grouped in intermediate positions to relieve any bareness that might exist. The next season shrubbery borders and groups might be planted with additional trees on the lawn for ornamental purposes. The flower garden need not follow till later. Meanwhile, the pleasure accompanying development would be going on with always some little thing to look forward to.

If you have the time to study all these things out properly it will be a source of satisfaction and pleasure, and you have but to show the completed scheme to some one competent to criticise it; if you have not that time, it will be to your profit to spend a few dollars on expert advice.

Plant trees and shrubs that have permanent value and not too ordinary. Avoid the cheap, quick-growing trees which are invariably less satisfactory in the end and are short-lived. I will only name the oaks as being especially worthy trees, and ones that will never bring regret. A few really rare plants will increase the interest in your place wonderfully. Such beautiful things as the yellow wood, gingko, sophora and Japanese varnish tree are not difficult to obtain, yet they are not common.

This paper has dealt with waste places in a rather broad sense. There are many little places that would seem to come more strictly under that heading that I have not mentioned. There may be an old stump of a tree which would be beautified if a vine were allowed to clamber over it. An unusual piece of swampy ground could be made beautiful by planting in it some flags and Japanese iris, mallows, lythrum, coreopsis, and even many swamp-loving shrubs like the common elderberry, white fringe and swamp magnolia.

The walls of your house would likely be very much improved by a clinging vine. The fence along the front of your property could have a few vines placed at some of the posts. Many similar places will suggest themselves to you when you give the matter thought, and it is unnecessary for me to attempt further detail. My greatest fear is that we men of business allow waste places to locate in our minds. We think of utility; what we can plant here for profit and there for profit. Everything must pay in dollars and cents. These waste places I hope my hearers will plant up at once with thoughts of the beauties of nature. All else that I have suggested will then be carried out in natural course.

Tulip White Hawk or Albion.

We are indebted to Messrs Van Zanten Brothers, of Hillegom, Holland, for the illustration of this tulip herewith reproduced. The same firm also sends us the following descriptive notes: White Hawk, or Albion, is undoubtedly the best white tulip introduced to the trade. It is very early, and an easy forcer, bearing its large snow-white flowers on long, stiff stems far above the leaves. The flowers are of great substance, and after the plant comes into bloom they grow in size and beauty every day, and will stand any amount of handling in transit. The hanging form, as shown in the photograph, is not natural; but was done only to bring the size and shape of the flowers into good light. This tulip is of the highest value for forcing and bedding. It was previously introduced to the trade in a small way on account of being obtainable in very limited quantities; but as stock of it is plentiful now, we predict it soon will be one of the leading varieties.

TULIP WHITE HAWK, OR ALBION.

Review of the Market

NEW YORK.—The severe wintry weather that has been experienced this week has tended to lessen materially the demand for cut flowers, and with the exception of special grades of Bridesmaid roses we can safely say there is a plentiful supply of everything in the cut flower line.

Bride and American Beauty roses are not moving quick enough to suit the dealers; and the best grades of the latter mentioned variety are selling at anywhere from 35c. to 50c. each, when fresh. If held over a day or two, as happens quite often, the blooms are sold at 15c. or 20c. each, all of which helps to pull down the average in a marked degree. The best of the Bride are held at about $12.00 per 100, while the Bridesmaid will reach as high as $15.00 if the quality is there.

Owing to the severe weather violets are in a very poor way, so far as selling out goes. There are plenty of them arriving daily, but as the outdoor business is cut off by the cold, it is only a limited quantity that can be disposed of, and prices are anything but satisfactory.

Lilies are not meeting with the demand they did, and numbers are beginning to accumulate, tending to weaken the price somewhat.

The call for carnations is about sufficient to use up the supply, with no change in prices. Tulips are very plentiful, but the various kinds of narcissus are more so. There has been a general break in the values of the latter, as the buyers' taste do not seem to favor yellow just now. Von Sion hang fire at $2.00 per 100, but Golden Spur do better; the best of them bring as high as $4.00 per 100.

The demand for lily of the valley continues poor through some cause or other. There is a good call for pansies, where they can be had with reasonably long stems on.

If this cold weather keeps up any length of time we shall no doubt see a shortening up in the supply of flowers all round.

ST. PAUL.—The trend of trade has been upward the past two weeks, and if flowers were more plentiful so that critical buyers could obtain just what they want at all times, business would be considered extra fine.

The near approach of Lent may have had an effect on trade, as some society people still observe the fast period. But the deaths of a large number of well known old settlers have created a very good demand for funeral flowers and stimulated business more than anything else. The return of the sun after an almost total absence of three months has increased the supply somewhat, but good roses are still very scarce, while American Beauty are only seen occasionally.

Carnations are more plentiful, but prices remain firm, and good blooms are all sold out daily. Bulbous stock is quite plentiful, and on account of the shortage of other flowers sells very readily. The bulb forcers have struck it right for once, and will make good money on their investment. Violets are scarce and but very few good ones are being picked. The dark weather seems to have killed them all in one way or another.

The coal situation remains unchanged, but every one wears happier facial expression as Spring draws near. We hear of no freeze ups on account of coal shortage, such as we read in the Florists' Exchange as occurring elsewhere.

VERITAS.

INDIANAPOLIS, IND.—St. Valentine's Day, as is Thanksgiving, seems to be gaining in prominence as a flower day each year. Business was decidedly quiet up to Friday, at which time it assumed a brighter aspect. By Saturday noon, it was almost equal to a "little Easter." A great many small sales were made which ranged from 50c. to $2.00. Many of the retail stores were laden with blooming plants, but these were not so popular as were small bows of flowers. Valentine's Day was certainly a good one for violets, as never before were so many sold on that day; 50c. per bunch of twenty-five was the customary price, and there was no trouble in disposing of a large quantity of them. Lily of the valley and other small flowers, such as freesias, sold extremely well. The demand for roses has been steady. The call for good American Beauty and Liberty, though, is not so very encouraging.

Carnations, as usual, constitute the backbone of the retail trade, the local market cutting everything as close as possible. Good carnations are selling at 2½c. to 3½c.; fancies at 4c. Not much trouble is experienced in disposing of them at 75c. to $1.00 per dozen.

Quite a lot of funeral work has helped to use up the bulbous stock, which is being cut in quantities.

Callas are numerous in this vicinity. They find ready sale at $1.00 per dozen, wholesale.

The Tomlinson market florists have experienced a prosperous week, most of them disposing of their stock at favorable prices.

I. B.

LOUISVILLE, KY.—The past week has again been a satisfactory one in a business way, added to by St. Valentine's Day. Each year this day becomes of greater importance to the local florists, and those of a progressive nature prepare for it. There was again an increased demand for cut flowers and blooming plants. Violets, lily of the valley, carnations, and such bulbous Spring flowers as are now in the market were mostly asked for. Roses were not in much demand. Plants, such as azaleas, primroses, spiræas, lily of the valley, tulips, and jonquils, in pots and pans, sold readily, especially such as could be disposed of at from 25c. to $1.00 each. A few Valentine boxes and pans were planted—enough to show how nice they can be made to look, which will insure a greater demand next year. The leading retailers all had nice window displays which attracted much attention.

Retail prices realized were: Roses, $1.50 to $2.50; American Beauty, $3.00 to $6.00; carnations, 50c. to $1.00; lily of the valley, 75c. to $1.00; jonquils, 50c. to $1.00 per dozen; violets, $1.00 to $2.00 per 100; narcissus and Roman hyacinths, 50c.; tulips, 75c. to $1.00; Harrisii lilies, $3.00 to $4.00; callas, $2.00 to $3.00 per dozen. There was enough of everything but tulips and Harrisii lilies to supply the demand.

A. R. B.

PITTSBURG.—There is no complaint about slow trade, but the high prices prevailing for good stock, especially roses, causes the retail florist to think that the grower has by far the best of it. Prices have never held up so well as this year, and if stock is as scarce during Lent it will be a good thing for the grower. Carnations and roses are in good form. Bulbous stock is abundant, but sells well. Tulips are showing up better, and yellow narcissus, although high priced, are in good demand.

E. C. R.

GRAND RAPIDS.—In roses and carnations a famine exists; no attempt has been made for some time to fill shipping orders in full. Orders, not from regular customers, are cut out wholly. It is to be hoped we will soon yet better growing weather, if not, we are in for the greatest flower famine at Easter we ever saw.

Roses bring $1.00 to $1.50 per dozen; American Beauty, $2.00 to $6.00 per dozen; carnations, 50c., 75c. and $1.00; bulbous stock, such as lily of the valley., Paper White, narcissus, tulip and daffodils, bring 50c. to 75c.; lilies, $2.00 per dozen; violets, 15c. for single, 20c. to 25c. for double. The scarcity of flowers affects the entire West, particularly the Chicago market, where the past week callas were substituted by the hundreds for roses, tulips for carnations, etc.

Anything, so long as it was a flower, had to go. Even violets, usually so plentiful at this season, were sold out clean.

G. F. C.

CHICAGO.—Since last report the market has had a tendency toward a break during the middle of the past week, with a slowly lowering of prices of most all grades of stock. The last two or three days values again stiffened, probably on account of St. Valentine's Day. Outside buying has also been brisk. Carnations are on the increase, but the price seems to be maintained, although some sales are reported at rather low figures. For inferior stock the average value is a great deal higher than a year ago, at present being from $1.00 to $4.00 per 100, with Prosperity at from $6.00 to $8.00 per 100 and Harlowarden at $6.00 per 100. Violets are still a hard article to clean up at a fair price; a few thousands are sold at a good figure, and the rest go begging for a buyer at from 60c to $1.50 per 100. Bulbous stock is still on the increase, with prices well maintained, due no doubt to the scarcity of other white flowers. R. J.

CINCINNATI, O.—Business still remains good and stock scarce. The best roses still sell at 8c., 10c., and 12c; best American Beauty at $6.00 per dozen; lily of the valley, 4c. to 5c; violets, 35c. to $1.00 per 100; carnations, $2.00, $3.00 and $4.00 per 100, with not half enough to go around. Narcissus and Roman hyacinths bring $3.00 per 100 and are selling well; Harrisii lilies, $2.00 per dozen; callas, $1.50. Cyclamen flowers sell at $1.00 to $2.00 per 100; smilax $12.00 to $15.00 per 100; asparagus, 50c. per string. All green goods are selling well. Ferns now bring 20c. per 100; $1.75 per 1,000. Never before have I seen flowers so scarce and the demand so active.

E. G. GILLETT.

DENVER.—Business was very good throughout the week, but with a temperature hovering down around the zero mark nearly all the time delivery of goods was hard and in a few cases stock was frozen. Roses and carnations are available only in lots equal to about the demand, while bulbous flowers are in good supply, but are being well used up, mostly in table work. Trade for St. Valentine's Day was exceptionally good. The weather was against it, and perhaps hurt the sales on violets a little, but, notwithstanding that, they went well. Carnations also enjoyed a good run, and were early cleared out. Flowering plants, too, went very well, azaleas selling best.

S.

PROVIDENCE, R. I.—This week has brought us a heavy snowstorm which affected the store trade. Last week, including St. Valentine's Day, was a continuous run of bright, Spring-like day, with an increased cut and a good demand for everything, especially violets, of which there were many thousands sold. They brought 35c. to 75c. per hundred, wholesale. Roses are now in full supply at 3c. to 10c. Carnations hold their own at 2c. and 3c. Tulips, daffodils and hyacinths bring 3c. Paper White narcissus are scarce.

Azaleas and bulbous plants in pans are ready, but find a light sale.

C. G. M.

Detroit, Mich.

Mrs. Elizabeth Hogg, of 358 Van Dyke avenue, died February 10, 1903, at the age of 83. She was the widow of the late James Hogg, with whom she came from Scotland in 1847. They formerly kept a florist's establishment where Mt. Elliott cemetery now stands. Mrs. Hogg is survived by three sons, David and Christopher, of Detroit, and James, of Chicago.

SOUTH BETHLEHEM, PA.—The dwelling house of Thomas Love, gardener to G. B. Linderman, Esq., was burned down on Monday, February 9, and all of his household effects destroyed. The rose house, located within five feet of the burned building, was unharmed, only one pane of glass being broken. The South Bethlehem firemen did good work, but it was of no avail. The thermometer was down to 20 degrees.

HILLSDALE, MICH.—Carl Hirsch is preparing to erect five new greenhouses for carnation growing.

Canadian News

Hamilton, Ont.

News of the Week.

The coal famine has not yet altogether relaxed its grasp; hard coal is reasonably plentiful at $8.00 per ton, but soft coal is scarce. The dealers claim that no screenings have arrived in the city for three weeks, so that those who depend on that fuel have had to burn something else.

Retail business has been brisk for the past week. Ed. Walker finds that his new store gives him more room and better facilities for display. Miss Townsend reports business good; all kinds of cut stock being in demand. Roses are still very scarce and unusually poor. Bulbous stock is finding better sale this season than for many years, practically everything grown moves at a fair price.

On the night of the 17th temperatures from 6 to 10 below zero were recorded by different growers, and a very high wind prevailed during part of the night. It would have been a good test on the heating apparatus at an ordinary time when lots of good fuel was on hand, but as it was, there is almost sure to have been some damage by frost, although I have not heard of any so far.

George Slocomb has taken Charles Mason's place. He has burned wood the most of the Winter, and he is getting a nice general stock in shape for the Spring.

George Norwood, Locke street, S., is doing very well at his new stand. He has grown one house of lettuce this Winter, and it has no doubt been his best paying crop, as most of the vegetable gardeners closed down for lack of fuel.

Harry Marshall is growing the plants for the City Parks and he is in consequence, kept pretty busy this Winter.

Club Meeting.

The regular meeting of the Gardeners' and Florists' Club was held on the 17th inst. President Turner was in the chair and a fair number of members were present. The extreme cold weather and the fact that the trolley cars were not running for the greater part of the evening, owing to lack of power, frustrated the efforts of the club to secure a full attendance of the growers and retailers to arrange more satisfactory prices. After the business was completed the members engaged in quiet games. Albert Kirk gave a couple of recitations. A musical trio was also heard from, but as they promised to do better next time, it will be as well to withhold meantime the opinion of the audience. BEAVER.

THE MARKET

LONDON, ONT.—The weather has been mild but dull and cloudy. Its only advantage is the saving in fuel. This to most of the growers is an item that would have been a secondary consideration other seasons, providing they had bright weather. There is a good demand for all kinds of stock, with a decided shortage in roses and carnations. Bulbous flowers are coming in more plentifully and meeting with ready sale. Funeral orders keep the supply of white stock at a premium.

The London Horticultural Society sent two representatives to the organization meeting of the Civic Improvement League in Toronto on February 13. G.

OTTAWA.—Little sun and more snow is the weather condition. Trade is very good. Von Sion narcissus seem to be in fashion and they are extra-good blooms this year. The demand for tulips has also been very good, but, unfortunately, some growers will cut the price, selling at 50c. per dozen. Roses are still very scarce, and to make matters worse much of the imported stock is poor in quality but rich in price. Carnations are yielding well, but still not enough. In price, Mrs. Lawson leads, as it also does in crop, bringing $1.00. Other good varieties realize 75c., although some very foolishly sell them at 50c., and 75c. for Mrs. Lawson.

Violets are in fair supply, but the demand is not up to that of former years; they are retailing at $1.00 to $1.50. Scrim is cutting some fair sweet peas which go readily at 20c. a dozen.

The plant trade continues fair; good cyclamen, Primula obconica, and azalea selling well. The Easter lilies show a tendency to be on the early side. The variety in appearance of these is great. Longiflorum are a mongrel lot; some good and many of no use; others diseased.

The fuel question remains the same as it was. We are still burning wood at $5.50 a cord, with sawdust at $1.50 a load. The city is trying to make it interesting by talking of bringing action against the coal dealers for conspiracy to keep up the price, which is now $9.00. Little coal is to be had. E.

TORONTO, CAN.—Business continues very good, with roses scarce. Although they are coming in now freely and of better quality there is not as yet enough to go around. Carnations are both good and fairly plentiful, and bulbous stock is very abundant. Violets are good and plentiful; the best quality are still bringing good prices. St. Valentine's Day called for a large quantity of flowers, especially violets and lily of the valley. Dunlop had in his window a large heart of bronze galax leaves, with a bar of lily of the valley across it and in one corner a very large bunch of fine violets. It was a fine business breeder; and before 3 p. m. he was selling the stock out of the windows. Tidy had a fine bunch of orchids and he also did rushing business. St. Lawrence market was likewise lively on Saturday, but prices generally were away down. The department stores have cut the palm trade very fine. The last item is kentias at 8c each. T. M.

Philadelphia.

A Snow Storm.

This city, like many others, has been in the grip of the storm king the past week. The rainstorm that came on Sunday turned to sleet and then snow, until by Tuesday morning eight inches of snow were on the level. Tuesday night the thermometer went down to 6 below zero, then up to 22 degrees during Wednesday, and down to 1 below that night. Thursday was the coldest day of the Winter; the thermometer kept below 10 degrees all morning, and several boxes of flowers that arrived were frozen. Up to time of writing no damage has been heard of from the growers.

A Wedding.

The chief event of the week was the wedding of Robert Craig's eldest daughter, Edna Mayne, to David Lank, which took place on Tuesday. Over 700 invitations were sent out. The bride received a large number of very costly presents: silver and cut glass predominated. But there was also a quantity of what one might term level-headed presents—things useful for the home. The reception at night was a brilliant affair, and in spite of zero weather was well attended. The porch around the house was enclosed and heated; the packing shed was transformed into a regular banquet hall, and the pleasant time was kept up into the early hours.

Jottings.

Leo Niessen is still on the march of progress. His present wholesale quarters have long since proven inadequate, and he has now rented a large store on Arch street, below Thirteenth. The rear entrance will be close to the Flower Market.

The meeting of the Pennsylvania Horticultural Society on Tuesday last was well attended for such a bad night. Papers were read by John Thatcher on "Ornamental Foliage Plants," and Joseph Hurley on the "Planting of Evergreens and Their Care After Planting."

DAVID RUST.

New York.

News of the Week.

The weather on Monday evening was very much on the blizzard order and it grew worse as the night advanced. By Tuesday morning we had several inches of snow on the ground, with a fierce wind blowing continuously, and the local express that brings in the roses from Madison each morning was several hours late. There have been just such delays before, however, when the flowers traveled over the railroad route, so that the small inconvenience resulting from the flowers arriving late was not a new feature by any means. On Wednesday morning the temperature got down to within a few degrees of zero, and there was an occasional shipment that reached the city in a frozen state.

Ash Wednesday occurs during the coming week, and the Lenten season is close upon us. This might be a dull Lent; and then, again, it might not. For several years previous to the last it could not be said that business suffered much during the Lenten period. For a week or two last year, however, there were very quiet times in the flower business on account of the religious observance, but whether or not a similar condition will occur this year remains to be seen.

Chas. Koch, wholesale grower, Clarkson street, Brooklyn, will enter the ranks of the retail florists. He has taken the store in Flatbush avenue recently operated by John V. Phillips. Mr. Koch is quite an extensive grower, and by running a retail store in connection with his greenhouses, he will thus be able to dispose of his products direct to the consumer.

The Brooklyn Horticultural Society met on Monday evening, and although the night was about the worst of the season (a real blizzard raging) there was an attendance of over thirty members. The various committees had perfected all their arrangements, and the culmination of the Society's efforts will be found in another column, which tells of the entertainment and doings of the American Carnation Society in Brooklyn.

The first annual meeting of the Brooklyn Horticultural Society is called for Wednesday, March 4, in the Germania Club, 120 Schermerhorn street.

Herman C. Baartmann, bulb grower, Sassenheim, Holland, is in the city looking up his customers, and will leave in a few days for a Western trip.

The plant auction sales will commence the first week in March. With the dilapidated condition in which the Clinton market remains, we expect to see a very busy season in the auction rooms, as many growers will, and rightly so, refrain from exposing their plants for sale in that tumbledown structure called Clinton market.

Vaughan's Seed Store reports an unusually heavy demand for flower seeds, and the best qualities are the most sought for.

Wm. Elliott & Sons are extremely busy in the seed department at this time, and a heavy Spring trade is looked for.

Alex. Guttmann, wholesale florist, 52 West 29th street, has leased the entire building in which his store is located, and will occupy one of the upper floors as a residence.

J. P. Donohue, a son of Fred. Donohue, of Babylon, L. I., was run over by a train at Woodhaven Junction on Saturday last, and received injuries from which he died a few hours later. The young man was about 21 years of age, and was employed by the Long Island Railroad as a claim agent. He leaves a widow and two small children.

Frank H. Traendly was distributing cigars on Wednesday in honor of the advent of a lusty son, who arrived at the Traendly household on Tuesday forenoon. Mother and baby are doing well.

W. F. Kasting, of Buffalo, N. Y., arrived in the city last Sunday and stayed over to attend the American Carnation Society's convention.

The advance premium list of the Indiana Floral Festival and Chrysanthemum Show has been issued. Copies can be secured from Irwin Bertermann, Indianapolis.

Mention the Florists' Exchange when writing.

Some Floral Designs.

I send you a group photo of some designs put up by F. W. Pettitt, of Hopkinsville, Ky., showing how we crawled out of a shortage. We had no large designs and so made up a few combinations which pleased the buyers. The design showing the heart was made with a 26-inch crescent wreath, with a 14-inch heart inside. The square and compass had a 20-inch wreath around it, and an 18-inch crescent wreath encircled a small anchor. The other designs are just as we bought them.

This is sent to show other florists how to keep from losing a good order. Five years ago a floral design was a stranger here, and we think that in time the people will put more money into flowers.

I forgot to mention that the temperature was very mild the day the group was taken, and last night (February 2) the thermometer registered 62 degrees at 7 o'clock, something unheard of here for several years.

Dahlias.

Editor Florists' Exchange:

In "Commercial Notes on Dahlias" in your issue of February 14, Mr. Tarbox makes some statements that are to me, to say the least, peculiar. He says: "Never plant two hills of the same variety in proximity. In my experience when this has been done I found one would produce nothing but poor flowers. This has been borne out by thirty years' experience."

I should like to know whether any more of your readers have had such an experience. I am not saying that your correspondent is incorrect in his statement; far from it; but such a statement seems strange, when looking at the quantities of one variety growing together as can be seen during the season of growth, almost anywhere, and every plant equally good. How can one variety assist another to produce perfect flowers? It has been said that there is nothing new under the sun, but this is entirely a new idea to me.

Further along your correspondent remarks that "a poor variety may be improved if planted alongside of a perfect sort. This is on account of fertilization by bees."

Also a new idea, Mr. Editor, that the effect of fertilization by bees will appear in the progeny of a poor variety if seed be saved, and young plants raised is patent to anyone, but how can a poor variety be otherwise improved by planting near to a good variety? What effect can bees have on a flower, whether dahlia or any other, beyond the simple act of transferring the pollen from one flower to another.

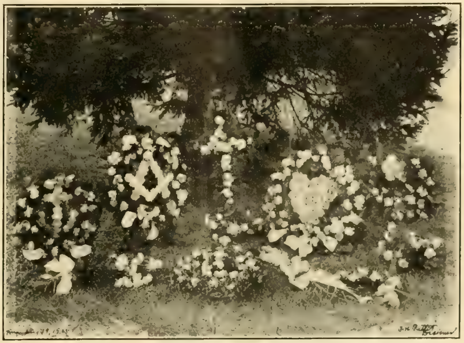
I never before heard that they had any. I am no dahlia expert and would appreciate further light on this subject. CHAS. H. TOTTY.

Greeting From New Zealand.

At this season it is customary to take a glance back at the work of the year which is just closing and consider the prospects for the new. The suffocating hand of drought has gripped heavily at the heart of our neighbors—the Federated State of Australia. Fortunately, it has now relented its withering grasp and welcome rains have become almost general. It was time. Farmers and runholders, who are usually sellers of stock and produce, have been without enough of these for themselves and have been forced to purchase from imported shipments coming from New Zealand and even from South America and the United States, and for these, prices were particularly high. Of course, what has been Australia's loss has been New Zealand's gain, but the feeling here has been one of heartfelt sympathy with the sufferers.

In our own country, the past year has been a most prosperous one with all classes. There is, of course, the usual number of grumblers who maintain that the country is going to regions which are not usually referred to in polite society. As answer to these, however, it is pointed out that the prices obtained for almost all produce are far higher than for years past. For stock, grain, wool, and so on through every class, the rates have risen. Work is plentiful, and wages have advanced considerably. As a set-off against the latter, the increased prices of meat and grain have to be considered, but as values on imported articles have not risen to any great extent, the workers are still better off.

In horticultural matters, the usual shows have been held and have without doubt done much to encourage the love of horticulture. Here, there is no particular show, or shows, which command pre-eminent attention, as is the case in the Australian colonies. All the towns, including what would be called "at home" country hamlets, have their shows once or twice a year. Perhaps the flower that has received most attention and called forth the most interest during the year is the daffodil and its family. A few years ago, these were quite neglected here; but, following the lead of the older countries, the trade has taken them up energetically, and several splendidly complete collections are maintained. New varieties are added quickly to the list; in fact, so rapidly do they accumulate that one wonders where they will stop. In some cases, varieties, practically the same, or at least too much alike, are being offered as new and distinct. This should not be. It is very annoying to growers in distant countries (who have no means of seeing flowers of new varieties at the shows as English people have) to import high-priced sorts and, after acclimatising them and waiting one or two years, to find that they are nothing but what is already in the nursery in dozens or hundreds.



AN OBJECT LESSON IN THE MAKING OF FLORAL DESIGNS.
F. W. Pettitt, Hopkinsville, Ky., Artist.

During the last few seasons, many splendid additions have been made to our rose lists, and these have already proved themselves so serviceable that we could hardly part with them.

Carnations, too, have received some attention. With these flowers the progress is slower, owing mostly, no doubt, to the difficulty of importing the latest and best novelties from Europe and America. It is practically impossible to receive these alive by post. The only way to do so is to have established plants in pots brought out by a passenger who will attend to them on the voyage.

The establishing of a National Society of Horticulture in New Zealand was an event of some importance, and should bear good fruit. This will doubtless be affiliated with the R. H. S. of England and should be the means of adding to the number of its subscribers. A conference of gentlemen, including private growers and members of the trade, was held in Dunedin and the final arrangements made. A number of valuable papers were contributed and these have been printed in book form and circulated by the Department of Agriculture.

With the nurserymen, the past season has been a good one, especially in fruit trees, which are being largely planted here and on commercial lines. Canning and pulping factories have been started and the industry promises to extend. The nurserymen complain in some instances of the lack of skilled labor, and the same remark applies to general gardeners. There are plenty of men who call themselves gardeners, who are really but common laborers and who lower the status of the really good men. The fact is that here, at least, the employers of gardeners pay too low a wage in proportion to that given to tradesmen. To be a good gardener in all branches surely requires more brains, energy and ability than to be a carpenter or bricklayer. The latter are paid 10s. to 12s. a day, but the former usually only receives from 7s. to 9s. The idea often suggests itself that it would be a good thing if seedsmen's assistants were allowed the opportunity of passing an examination which might be held annually as that for gardeners is. This could be made in two or three grades; the first representing an ordinary assistant with a passable knowledge of botany, seed growing, nursery work and farming; the second, a more extensive acquaintance with the above and with the addition of bookkeeping and business methods, and representing a man capable of taking charge of a business; while to qualify for the third would require more than ordinary ability. This should be a guide for an employer as to the capabilities of an applicant for a position, and would be especially useful in the cases where colonial or American houses require assistants. Of course, there are other considerations, as that of the amount of energy that one individual brings to bear on the work in hand more than another. Many good men, perhaps, could not pass such an examination. However, it could not possibly do the assistants any harm, and it would have the tendency to raise the status of the employees.

In seed growing, not very much is harvested here unless for local consumption, with the exception of cocksfoot and peas. A number of the vegetable and farm seeds for colonial use are saved here, the principal of which are mangels, carrots, beans, beet and onion. At present the cocksfoot fields promise an abundant harvest; while the yield of peas should be a normal one. From all accounts every bushel will be desirable as the past crop has been a very poor one in Europe and America.

On the whole, New Zealand has cause to be satisfied and to look back upon the past year as one of steady prosperity. Let us hope the new one will be good both at home and throughout the world.

GEO. COOPER,
Wellington, New Zealand.

Utica, N. Y.

February 5, 1903, the Utica Florists' Club held its annual carnation meeting, which was very largely attended. Afterward the members enjoyed a smoker and through the evening were also entertained by some fine selections on the graphophone. The growers of new varieties of carnations were very liberal in sending us specimen flowers, which were much admired. Peter Fisher, of Ellis, Mass., sent us Enchantress, which needs no comment, and also two new varieties that I believe are not to be sent out until 1904; Mrs. Patten and Nelson Fisher, grand flowers that every one will want. The Boston Market had not been seen in this locality before; it is a fine white.

S. J. Reuter, of Westerly, R. I., sent us a beautiful bunch of his Lillian Pond; it will be hard to beat and was well thought of by all. Mr. Warburton, of Fall River, had an elegant bunch of Cressbrook and two good seedlings. S. J. Goddard, Framingham, Mass., sent us the Queen, a good white, with fine stem and large flower; also two seedlings, one orange and pink and one pink, of 1901. A fine bunch of the Queen came from Little South Foral Co., Natick, Mass. The Queen is surely a splendid white, good enough for most any one. We were sorry the box of blooms of President McKinley, from E. T. Grave, Richmond, Ind., was frozen. We also had Marian from Isaac Passmore, of West Chester, Pa., a good white; and from J. G. Sholl, of Burlington, N. J., came Success and several seedlings, for all of which we were very much obliged.

The writer visited Wm. Mathews last Wednesday, where he met Treasurer C. F. Seitzer. We were taken in hand by Harry Mathews, who kindly showed us about the place, his father being absent. A house of Mrs. Lawson carnation and others all looked well. Mr. Mathews struck it bad on lilies this year, he says the worst in some time. But he may well be proud of his cattleyas. He has a large collection of these, including one of the finest of Cattleya Trianæ alba, a pure white, also another white with a slight tint of lavender in it.

We also called on Mr. Baker and found something new in the way of a pure white Primula obconica from a batch of seedlings raised last year. This may be common, but I had never seen it before. He has about twenty plants of it. Bulbous stock was in fine shape, also his azaleas. One house of lilies was being pushed along—at least we thought it quite warm.

I have not heard of more than two or three going to Brooklyn this week.

We strolled out to see our friend, Peter Crowe, and found him among his fern, Croweanum. About the last of 30,000 of the fern is a sight now, just as fine as ever. He cannot get enough of it to supply the trade.

We went over to the rose plant; a grand crop was in sight on long stems.

John E. Hughes, of Oneida, was in town last Wednesday on a flying trip. He had an evening party on hand and, of course, had to come to Utica for something extra in roses.

SPRING FLOWERS SAMUEL S. PENNOCK CHOICE NOVELTIES
1612-14-16-18 Ludlow St., PHILADELPHIA, PA.
Mention the Florists' Exchange when writing.

Indianapolis, Ind.

Notes.

Herman Junge, of Smith & Young, has been termed "the violet king." It is he who looks after the violet interests of the firm, and as his flowers have been large and numerous, the title is a suitable one.

John Heidenreich is growing some of the best blooming plants in the city. His azaleas are exceptionally fine.

A number of men comprising the advisory committee for the coming flower show, held a meeting at the Commercial Club, Friday. All matters with the directors were favorably adjusted, the premium list pronounced satisfactory, and several other subjects attended to.

Philip Conway barely escaped being quarantined for smallpox, as one of his employees has a severe case of this disease.
I. B.

Buffalo.

News Notes.

This locality is this week in the common throes of coldest weather of this Winter, with the temperature hovering close to the zero point and cold winds. Vigilant care on the part of the plantsmen is necessary.

Flowers are coming in in quite a variety, but in quantity not above the daily demands. Trade in the stores is a bit scattering, but called fair. St. Valentine's Day last week gave some impetus, especially in the calls for violets.

Thomas Coleman, formerly with Bullock & Co., while retaining a position with a department store here, has severed his connection with the latter, and his entire energies will be devoted to his florist business hereafter. William Grever, recently with him, and who holds the record of over ten years' service in the same continuing business, at various times under different ownerships, has severed his relations with the same.

The number of craftsmen attending the Carnation meeting in Brooklyn this week promises to be limited. W. F. Kasting left on Monday, and on Tuesday Wm. Scott also departed. The Detroit contingent stopped over a train en route on that day.

John Barclay, of New York, was a caller last week.
VIDI.

St. Paul.

Among Growers.

Carl Petersen, who built two new houses on Stryker avenue and commenced business last Summer, can be justly termed the "bulb king," for the stock which he has been bringing in the past month is beyond doubt the finest ever seen in St. Paul. Hyacinths, with 15-inch stems and 10-inch spikes, in addition, all in full bloom and perfect by January 15, are a credit to any grower. His tulips and daffodils are equally good.

From Minneapolis we hear wafted the fame of "Monson's violets," which have almost become a household word in the Twin Cities. Such fine blooms and so many to the square foot were never before known. He is keeping an accurate tab on the crop and will have some astounding figures to give our readers at the end of the season.

Not content with getting all the orders in sight his first trip, T. J. Wait, representing August Rhotert, of New York, has made a second trip to the Twin Cities and bagged a lot more.

Mr. Whatton, orchid grower for Dr. Schiffmann, recently showed me some grand specimens of phalænopsis, which he thinks should become most popular with the flower lovers of the country. Mr. Walton has a reputation for growing all orchids well and his house of cattleyas, just coming into bloom, certainly bears out his reputation. A few oncidiums and Cœlogyne cristata were in fine shape at the time of my call. The doctor and his family are en route to Manila on a trip around the world. He will most likely bring home some fine specimens from the Orient.

Private greenhouses are not very plentiful in the Northwest, probably because our men have been too absorbed in the race for wealth to pay attention to the more æsthetic side of life; and, possibly, because the example has not been set often enough for them to copy.

But though private places here are rare, the one built up and maintained by J. J. Hill is worthy of emulation by others of our monied men. Mr. Hallstrom, the florist in charge, is one of those quiet men who says little but accomplishes much. I venture to say that no commercial place in America grows a larger variety of plants and flowers than this, and I am sure none grows them better. Mr. Hill tries all the new things as they come along, in fact, must have them.
VERITAS.

Conshohocken, Pa.

John Etchingham, of the firm of Etchingham Bros., florists, met with a painful driving accident Sunday, February 8. His horse took fright, and he was thrown from the wagon, sustaining a displaced wrist and severe lacerations about the head and face.

Paterson, N. J.

Rony & Dalgleish have bought out the store of Mrs. Kirberg on Broadway.

Carnation blooms are beginning to appear on the florists' wagons in the street. Those offered for sale last Saturday might be classed as common seconds.

Ridgewood, N J.

A. V. D. Snyder is shipping large quantities of bulbous stock, La Reine tulips being especially fine.

On and after March 2, we will be located at
1217 ARCH STREET
LEO. NIESSEN, PHILADELPHIA

THE FLORISTS' EXCHANGE, 2 Duane Street, N. Y

Washington, D. C.

The Week's News.

Great preparations are being made for the beautifying of Washington parks next Summer, and about 750,000 plants will be required. Fully 50,000 tulips and other bulbs will be employed, and, owing to the increased improvements in this line planned for the coming season, it will probably tax the facilities to the utmost. One of the largest pieces of work will be the improvements at Mount Vernon square, which is the location of the new Carnegie library. The work to be done on these grounds alone will amount to about $15,000, and in addition a new park on Massachusetts avenue extended and one on North Capitol street, which have heretofore been practically nothing more than vacant lots, will be caused to blossom forth in all kinds of glory. It is not generally known that there are in the District of Columbia more than 4,000 acres of public reservations, of which nearly 400 are in either a highly or partially improved state of cultivation.

Carnations are doing exceedingly well and are bringing good prices. The demand for violets still keeps up, although in some instances a pretty good sized bunch is sold for 25 cents. Tulips in pans look nice in the windows of some of the F street florists, but the present cold snap of almost zero notch is not conducive to the sale of much stock of this kind.

At one of the recent social gatherings at the White House 1,400 carnations were used, in addition to 2,500 spikes of Roman hyacinths, 600 Liberty roses and 300 spikes of lily of the valley. The green foliage was produced by 300 sprays of asparagus and 1,200 fronds of maidenhair fern.

Colonel Theodore A. Bingham, who for the past six years has been superintendent of public buildings and grounds for the District of Columbia, has asked for a transfer, and arrangements have been completed for him to assume charge of river and harbor works in Western New York and Pennsylvania, with headquarters at Buffalo. The services rendered by the Colonel have gained for him the admiration and respect of all classes, and the city may well be proud of the system of parks and roadways over which he has been the guiding star in recent years. Among the many improvements he has accomplished was the thorough overhauling and rearrangement of the propogating gardens. It is said to have been due to his initial efforts that the Park Commission was created, and one of his recent recommendations is the construction of a boulevard to encircle the basin near the Washington monument grounds, thence crossing a stone bridge to the Potomac flats. His successor will be Major Thomas W. Symons, of the Engineer Corps.

At the wedding of the daughter of Senator Cockrell, at the Church of the Covenant, on Saturday morning, the 14th instant, the decorations were in white and green, marguerites, Bride roses and white lilacs being used in connection with delicate ferns and choice tropical greens.

The post office appropriation bill, which contains one item of special interest to seedsmen, that of mailing catalogues in bulk, is being held up in the Senate on account of having the Statehood bill tacked onto it as a "rider." However, it is claimed that only about five hours are needed, in case of absolute necessity, for the passage of any of the departmental appropriation bills alone, and it is thought that no serious inconvenience will be caused by this temporary hold-up. J. A. B.

Grand Rapids, Mich.

The club was reorganized at a meeting held in the store of Henry Smith on February 9. Ten names were added to the list, which gives the club about thirty-five members, and the following officers elected: President, Henry Smith; treasurer, James Schols, secretary, N. B. Stover; reporter, George F. Crabb. Standing committees were appointed as follows: Reception, Wenzel Cukierski, P. Kunst and Nicholas Freeling; subjects, Alfred Hanna, Henry Van Velden and G. F. Crabb. Some minor changes were made in the constitution and by-laws. The club hereafter will meet the third Monday in each month, though a regular meeting place has not been secured, and will discuss some subject relating to floriculture at each meeting. It is expected the club can secure the Board of Trade rooms. An attempt to make the title "Florists and Gardeners' Club" was defeated. At the next meeting N. B. Stover reads a paper on "How to Grow Violets."

There is a howling blizzard at a 5-degree below zero rate, tearing around the corner of the greenhouses. That's what makes the coal dealer smile and coolly boost the price another 50c. per ton!

So far, it seems, no one is going to Brooklyn this year, which is to be regretted. G. F. C.

Providence, R. I.

Club Notes.

The club meeting was held February 12 with a satisfactory attendance. Messrs. Mathewson and Wheeler, of Kingston, were elected members. Messrs. John Macrae and Wm. Hockey gave an extended account of their trip among the growers around Boston and the impression made by carnations Enchantress, Mrs. Lawson and Governor Wolcott. This was one of the most interesting talks of the evening.

A paper, asking for lower express rates was drawn up and will be circulated among the trade. At the next meeting it is expected that either Professor Card or Professor Wheeler will present facts concerning a prospective State Experimental Greenhouse at Kingston College.

Jottings.

T. J. Johnston's store is now equipped with automatic fire sprinklers. Mr. Johnston and half a dozen local florists contemplate going to the Carnation Society's meeting in Brooklyn.

The coal situation is thoroughly eased now and no difficulty is found in obtaining a supply.

F. Macrae's illness are right in line for Easter, and are pronounced in excellent shape.

President Appleton is endeavoring to give a business-like administration of the club meetings. The present members make a good basis for future success.

The florists should get together and arrange for a "Violet Saturday" for the 28 of this month and have a big display and special price.

C. MACNAIR.

Pittsburg.

The Week's News.

Frank Britenbaugh of Britenbaugh Bros., of Bennett, Pa., died last week of pneumonia after a short illness. He was in his fifty-first year and had spent his lifetime as a florist, starting in a small way. At his death he had quite an extensive place.

A. M. Murdoch has been confined to his house for some weeks with an attack of grippe.

Dr. John Merie Coulter, head of the department of botany in Chicago University, one of the best known botanists in the world, gave a lecture in this city last week. His subject was "Plant Societies."

The Carnation Society's convention in Brooklyn is the cause of the scarcity of florists in the city at present, no fewer than fifteen to my knowledge are in New York in spite of the cold snap. The following party left Tuesday evening by P. R. R.: F. Burki, T. P. Langhans, C. Limbach, W. Hinkel, Ed Blind, B. L. Elliott, J. Wyland, M. Bunting, E. C. Ludwig, wife and family and E. C. Reineman and W. Lauch. Arriving in New York about three hours late a call was made on Patrick O'Mara, of Peter Henderson & Co., and then after lunch the party took train for Scarborough, N. Y., to visit Pierson's new houses. Messrs. Pierson procured a sleigh and took us to Briarcliffe. The party was delighted with the visit; the new large house built by Pierson-Sefton Co. surprised the boys and were pronounced by all the most complete in every detail that any had ever seen. The stock of American Beauty roses was in fine condition, although off crop at present; and the new striped carnation is a wonder—immense flower and strong growth. The visitors thank Messrs. Pierson for the courtesies extended.

In the evening, after dinner, another Pittsburger dropped in. W. Breitenstein, who came for the flower show. The whole party is stopping at the Astor House, and in spite of the blustery, cold weather are having a good time. E. C. REINEMAN.

Cincinnati.

A Blizzard.

At this writing, February 16, we are having the worst blizzard experienced this season, and the thermometer promises to reach the zero mark by morning. The advent of the Carnation Society meeting seems to be a sure forerunner of very bad weather. W. K. Partridge and R. Witterstætter will probably attend the gathering

The rose show of the Cincinnati Florists' Society was quite a success. The only outside exhibitors were Heller Bros., and they only sent a vase of Franz Deegen rose. W. K. Partridge, of the Bloomhurst Nurseries, carried off the greater part of the first prizes. George & Allan took first prize for general display and second and third prizes. Corbett & Wilson were first on violets; J. W. Rodgers, second. R. Witterstætter displayed some fine seedling carnations.

The meeting of the society in the evening was well attended and quite a few visitors were present, including Mr. Trillow, representing J. C. Vaughan, Paul Berkowitz and B. Eschner. A committee was appointed to be named the social committee, consisting of C. J. Ohmer and J. W. Rodgers. I believe they will give a progressive euchre to start with, and a nice lunch thrown in. The social features of any society tend to hold the members together better and always promote good feeling. We wish this committee success in its undertaking, and hope it will receive the support of all the members when the time to buy tickets arrives.

E. G. GILLETT.

Hartford, Conn.

Notes.

Theo. Wirth, State vice-president of the S. A. F., has sent letters to about 100 of the leading florists in the State to find out their feelings in regard to the increased charges for express rates on cut flowers, and asking if the parties would be willing to attend a meeting to discuss the subject some time during this month.

The officers of the Florists' Club attended the banquet, Tuesday evening, given by the New Haven Horticultural Society at the Tontine Hotel.

Robert Karlstrom, gardener at Elizabeth Park greenhouses, has returned from New York, where he has been visiting fo the past week.

HAVE YOU SEEN THE

1903
DUPLEX GUTTER?

To see it put up in a house is the only way to judge. Over 15,000 feet sold last season, and duplicate orders coming in. This is the proof I offer. None other give the same good results. No drip from glass or gutter. Never breaks at joints by sagging posts, heavy winds or other strains. Straight as a string. Less shade than any other. Adjustable to all sizes of glass. Any ordinary person can erect it better than a wooden gutter. A bench under the gutter is the best bench in a house built with the Duplex Gutter. Do not condemn the Duplex Gutter because you do not have it, or do not know it. Do not class it with the cast iron gutter you are condemning. **SEE IT, TRY IT AND BE CONVINCED.** Never mind what a prejudiced and jealous manufacturer of cast iron gutters tells you. Catalogue free.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 9 NEW YORK, FEBRUARY 28, 1903 One Dollar Per Year

We are now booking orders for the

EW SCARLET ARNATION FLAMINGO

For Delivery January, 1904

Those who saw it will endorse our statement that it is, without question, the most uable New Variety shown at the Carnation Convention last week. All the leading erts agreed on its great value. We want a good scarlet carnation, and this is a great ance in this color. It is by far the largest scarlet carnation yet raised, borne on long ng, stiff stems, and is a free and early bloomer. It will rank in quality with MRS. THOS. LAWSON, ENCHANTRESS, PROSPERITY, Etc. Was awarded the Lawson Silver Medal and S. A. F. Silver Medal. Scored 90 points.

There is sure to be a tremendous demand for this, and if you want to secure early ivery, order should be placed without delay. Orders will be filled strictly in rotation received, so the earlier you book order, the earlier delivery we can make. Let us e order at once while the matter is in mind.

We shall also have to offer for 1904 the following exceptionally valuable New Carnations

NELSON FISHER, MRS. M. A. PATTEN and ALBATROSS

Price of all the above, named varieties,

$12.00 per 100; $100.00 per 1000.

We offer also

EW WHITE ANNA MONT BLANC

Delivery March, 1903

This is the most valuable new variety that has been offered in years. It is an exceedingly e bloomer, producing large spikes of white flowers on strong branching spikes borne well ove the foliage. Dwarf habit—identical with MME. CROZY in height and style of growth. great masses of snowy blossoms contrast splendidly with the crimson, pink and yellow rieties, and it will be found indispensable in all fine Canna collections. **A Novelty of rling Merit.**

$1.00 each; $9.00 per dozen; $50.00 per 100.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; C. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

NEW YORK.—Henry Nungesser & Co. have just received a shipment of two carloads of Turkestan alfalfa, which the firm bought direct from the growing districts in Asia. It is said to be a seed new to this country, for which there is a good demand here.

BINGHAMTON, N. Y.—The Binghamton Seed Company has been incorporated, with a capital stock of $50,000. Incorporators: William B. Cleves, Willard M. Camp, and Phillip Lawrence.

OTTUMWA, IA.—The Ottumwa Seed Company will be permanently located at 121 West Second street. This concern is composed of C. H. Lane, of St. Joseph, Mo., who formerly conducted a similar business in King City, Mo., and G. L. Bissel, who was last year identified with the Sioux City Seed Company in Ottumwa.

Advices from Holland to an English contemporary state that "from investigations it appears that in many places the young stock of hyacinth bulbs has been killed right out, but those that are to be saleable bulbs are still alive. No doubt considerable damage has been done to the bulb crops generally, but to what extent cannot be said until we are six weeks further advanced. The seedsmen are now working under high pressure, and the extreme scarcity of some items is already causing much inconvenience. Spring shipments of plants have not yet commenced, but judging by the orders placed, it is evident that no surplus is to remain on the hands of the growers, and even the common spiræa are bringing higher prices than in the Autumn of last year."

European Notes.

We are at present passing through a period of very fine warm weather, which, acting as a tonic to trade, is causing the seedsman to be very busy. So warm, indeed, have the days been that the earlier varieties of cabbage have already commenced to run, and in some cases are showing their blooms. With the probability of more hard weather ahead (and we hear of snow and frost in the mountainous districts) growers are rather anxious and fear they may yet lose part of their crops.

In Holland the raisers report some damage to bulbs by the severe early frosts, but at present it would seem to affect only the very young bulbs, and no appreciable shortage on this year's delivery is anticipated.

The death is announced of A. J. Stokes, of London, who died, suddenly, on February 7, in his 91st year. Mr. Stokes represented James Carter, Dunnett & Beale in this country for a period of fourteen years, commencing from about 1868, and, although unknown to the most of the present seed trade, there are several of its older members who will remember his kindly smile and genial ways. He retained his full faculties to the last and, as he had been in the seed trade all his life, his reminiscences of old firms and bygone times were most interesting, and he used, in those days, to take large orders with many lines, prices open to be arranged when the seeds were harvested, a system that would not cut much ice in these days of keen competition. He was well known on your side some 18 or 20 years ago.

EUROPEAN SEEDS.

Novelties at Ventura, Cal.

A local paper, speaking of some of the novelties obtained by Mrs. Theodosia B. Shepherd, of Ventura-by-the-Sea, Cal., mentions a giant climbing begonia that spreads itself 15 feet over a trellis and produces blossoms two inches in length. The flowers are a soft, beautiful pink and so numerous that at times 150 clusters of buds and blossoms can be counted. Other novelties in flowers secured by Mrs Shepherd are giant cosmos with flowers five inches across, California poppies measuring four to six inches in diameter, climbing nasturtiums with crepe-like flowers 3½ inches broad, chrysanthemums, dahlias, etc. Some idea of the extensiveness of Mrs. Shepherd's work can be gathered from the fact that in her latest catalogue of seeds, bulbs and plants over 80 varieties of geraniums are described, many of which are new.

CATALOGUES RECEIVED.

Summer Flowering Spiraeas.

The fact that Spring flowering shrubs must not be pruned to a great extent after they have done growing, and that Fall blooming ones may be so pruned, has been reverted to so often that it needs no elaboration now. But there is an intermediate class, largely represented by Summer blooming spiraeas which give satisfaction treated either way. Taking callosa, Billardi, paniculata and Bumalda as representatives of this class, a good pruning in Spring will cause a heavy production of flowers in late Summer and Autumn, and some of the plants will continue in bloom until freezing weather, should there be a favorable Fall season.

Leaders to Evergreens.

Nurserymen and all others who import or purchase evergreens should be particular to stipulate that there should be a good leader to each plant. From various causes, many of them, especially the firs, are apt to lose their leaders, and when this occurs there is less prospect of a good sale. It sometimes takes several years before a good leader is again in place. In one way, it is not a loss, as the tree is making side growth all the time; but there is no gain in height until a leader appears. The way to provide a new leader is to secure a stake to the tree, to which is tied the most promising side shoot nearest the top. It takes some time for this shoot to understand what it is to do, but it does so at last, and proceeds to lead the tree.

Cutting Back Privet Hedges.

Occasionally one sees privet hedges cut back in early Winter, or before Winter is over. This is not the best thing to do. There is the protection during Winter to be gained by leaving the cutting back until later; besides that, the snows of the season are apt at times to disarrange or injure the branches, and when Winter is over, just what to do can be better determined. Let all such hedges, or individual bushes go until the close of Winter, but cut them back before the buds swell in Spring.

Do not be afraid of cutting away too much of a privet hedge. The harder it is cut the more vigor will the new shoots have. If thin at the bottom, cut it down to within six inches of the ground, then in June, and again in Midsummer, nip off the ends of growing shoots, and a good bushy base will result.

Similar treatment is to be recommended for all deciduous hedges or bushes. Let the Winter pass; then prune immediately, before the buds swell. If let go until buds are bursting, there is a loss of time while waiting for new buds to form. With us, we think the second week of March the proper time to do the work.

Increasing Japanese Maples.

There are three ways of increasing Japanese maples—by grafting, layering, and inarching. For grafting and inarching the common green form, A. polymorphum, is to be recommended. Grafting may be performed indoors during Winter, or in early Spring on outside plants. Inarching and layering are in order in June and later, when the new wood is of sufficient length.

There is a growing demand for these maples, because of their extreme beauty in early Spring, when the leaves are fairly developed. Too much shade is against the display of the best color. On the other hand, the full sun in Midsummer is apt to burn the foliage. A partially shaded place is the best for them.

Beauty of the Red Cedar.

Because the red cedar is common it is not as much thought of as the Irish and the Swedish juniper, which in its younger years it much resembles in style of growth. Of like pyramidal outline, it has a broader base, which to many would enhance its value. Those who have it on their grounds usually prefer it to the junipers mentioned, both for the character described and because it does not lose a branch here and there by fungus or any other cause, which junipers sometimes do, much to their disfigurement.

Western nurserymen grow this cedar in large quantities, there being a good demand for it for setting out for commercial purposes.

Carolina Buckthorn.

The name, buckthorn, has been so long associated in our minds as a name for a hedge plant, that to think of it as an ornamental shrub is not common. Yet the common buckthorn, Rhamnus cathartica, is not to be despised as a lawn shrub, being of much beauty when crowded with its black berries in Autumn, as it often is. But better than it, and the best of all the buckthorns I know, is the Rhamnus carolinianus, the one known as the Carolina buckthorn. Its foliage is handsome, large, shining, and turning to a brilliant orange brown in Autumn. Its chief charm, however, is its lovely berries. Following the small, greenish-looking flowers, they are green at the start, becoming a brilliant red, and from this to a shining black at last. These berries, backed by the luxuriant foliage, which keeps fresh till freezing weather comes, are extremely ornamental. Its natural home is in the mountains of North Carolina and Tennessee and through the South. It is quite at home in Pennsylvania in its hardiness. If the seeds are gathered as soon as ripe, washed free of pulp and sown at once, they sprout in Spring.

The persistency of its foliage in late Autumn suggests its being almost evergreen in sheltered places further south.

Propagating the Peony.

The propagation of the herbaceous peony is well understood, being nearly altogether by division of the strong plants. They can also be raised from seed, and in this way will give a large lot of pretty kinds, the most of which will be single-flowered.

The tree peony is always in demand, not alone for its beauty, but also because, its propagation being slower, it is always difficult to obtain fair-sized plants of it. Then, too, it is such a very slow grower that after it has been increased it is years before the plants make an appearance to attract a customer.

Division of the herbaceous sorts is better done in Autumn than in Spring, and early in the season rather than late. The peony starts into growth so early in Spring that if the dividing of plants be left until then, it is very apt to be too late. As many divisions as desired may be made, so that each eye has a perfect root attached to it.

Seeds should be sown indoors, in boxes, in late Winter. They will hardly make growth enough that it would be wise to set them out the first season. Better transplant the Spring following. Sometimes some very good kinds are the result of a bed of seedlings, and always there are a lot available for many a position in a garden.

The tree peony, not being herbaceous, has a different habit of growth, and cannot be increased in the way single ones are. Large plants may be planted deeply, so that rooting may take place from the shoots thus buried, and in this way there will be as many plants as there are shoots, when divided. In addition to this method there is that of grafting. Fleshy roots of herbaceous sorts from a batch of seedlings, perhaps—make the stock. The end shoots of the tree peony should be used, preferably, and should be inserted, wedge shape, into the fleshy root. Waxed and placed in a warm place, the union just below ground, success is usually very fair. In Europe, the close of Summer is looked on as the most suitable time. Here, it has been found that late Winter is a good time, the grafted plants, being placed in gentle heat, rarely failing to unite.

JOSEPH MEEHAN.

Pittsburg.

Carnation Society's Convention Echoes

The members who attended the Carnation Society's meeting in Brooklyn arrived home Sunday morning in good time for breakfast. Every one was well pleased with the trip. The cold weather did not interfere with their pleasures. During the stay a trip was made to Dailledouze Bros.' place, where the visitors were shown around and entertained by Messrs. Dailledouze. Their establishment was in fine shape, the plants being in good condition, with a crop of fine blooms. The best way to find the Dailledouze place, we were told, was to ask for the lunatic asylum, and it was just on the opposite side of the street. We started out and made the first inquiry at the Brooklyn bridge. Others several times thereafter. Everybody who was asked knew exactly how to direct us, but they smiled and passed some remark.

On Saturday a party of 25 or more visited C. W. Ward's place. Reaching the station sleighs were in waiting and the party was taken to the greenhouses not far distant.

Superintendent of Parks W. Falconer spent a few days East last week, just before the Carnation Society's meeting.

J. W. Ludwig expects to go East Sunday to look around for something new for Easter trade.

The next meeting of the Florists' Club takes place Tuesday, March 3. It will be carnation night. A good show of cut blooms has been promised, and any one who has anything worthy of exhibiting should bring or send it in. Those members who were present at Brooklyn will tell all about the carnations that were exhibited there.

E. C. REINEMAN.

Milwaukee.

The retail florists of Milwaukee have declared open war upon the wholesale florists, who are alleged to have been encroaching upon the retailers' trade. The retailers have not perfected a plan of campaign, but a number of them met on Thursday night, February 19, and organized the Milwaukee Retail Florists' Association, of which William Currie is the president; William Edlefsen, vice-president, and Mrs. Ida Baumgarten, secretary. There were fifteen retail dealers present at the meeting, which was held at the Kirby House. James Chacona presided.

Calla, O.

Miss Carrie Bertolette has accepted a position in Templin's greenhouse establishment here. She is a graduate of Salem Business College.

Buffalo.

News Notes.

Business has recently inclined to the active, prompted considerably by calls for funeral occasions. Blooms are showing up in better quality almost daily. At Palmer's we noticed some specially fine pink sweet peas, of the Dailledouze strain.

The attendants at the Carnation Society's meeting W. J. Palmer, W. F. Kasting and William Scott give enthusiastic reports of the affair, especially in the matter of improved blooms; with mention, also, regarding the changed development of the larger-sized individual houses of leading growers in the vicinity, which most emphatically betoken development of a lasting nature.

After a three months' effort, Thomas Coleman, of 483 Main street, evidently decides the business is not all profit and glory, as the store with closed doors would indicate his retirement from the enterprise.

Phillip Latour, a long-time resident here, and locally known as a retail florist covering many years, died on Tuesday of this week at his home on Parade avenue. He had reached the age of sixty-five years, leaving a widow and five sons and daughters, one of the latter being Mrs. W. F. Kasting.

Carl Hagenburger, of West Mentor, Ohio, spent Wednesday here, on return from the Carnation Society's meeting. Other recent visitors included Martin Reukauf, representing Bayersdorfer & Co., and E. J. Fancourt, of S. S. Pennock, both of Philadelphia. VIDI.

CINERARIAS

Dwarf and semi-dwarf Giant flowered. Fine stocky plants, from 2½ in. pots, $2.50 per 100; 3 in. pots, $4.00 per 100. All of them ready for 5 inch, will make fine selling plants for Easter.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, ready for delivery in March, 75c. each.
$7.50 per Dozen; $50.00 per 100. Stock limited.

NEW CRIMSON RAMBLER, "PHILADELPHIA"

Flowers larger, more double, do not fade white, more durable, brighter color, not subject to mildew as Crimson Rambler is. 2½ in., **$12.00** per 100; **$100.00** per 1000. One-year field plants, cut back to 15 to 18 in., **$25.00** per 100. One-year field plants, 2½ to 3 ft., **$4.00** per doz., **$30 00 per** 100. Two-year field plants, 3 to 3½ ft., **Bushy, $7.00** per doz ; **$50.00** per 100.

BRIEFS FOR BUSY FLORISTS.

SEEDS.—There are some seeds that may be sown now, though, of course, there will need to be later sowings than this. But it is well to have a supply for both very early and later planting. Some of the seeds that should go in now are those of asters, stocks, zinnias, petunias, celosias and phlox.

ALTERNANTHERAS.—Such stock as is still in the flats, where it has been carried over the Winter, should receive some attention at this time. The best that can be done is to pot the plants into three-inch pots, using a soil that has a good portion of well-rotted manure in it, and then put them near the glass in a nice growing temperature. A good growth from now on is particularly desired with the alternanthera, and if the plants are put in a poor soil they will neither grow well nor have any color.

LILIES.—The buds should all be in sight by this time, to have them come in comfortably for Easter. Some changing around of the plants is always necessary to have the crop in at the right time, so that such plants as are getting too forward should at once be given cooler quarters, and shaded if that seems necessary. A careful watch must be kept to see that the plants arrive in full bloom, and at the same time be free from aphis. There is nothing more unsightly than a lily plant with the under side of the leaves covered with green fly; and such is sometimes seen in our stores.

Blue Hydrangeas.

It appears from a communication of M. André to the "Revue Horticole" that a certain soil near Angers, consisting of sand and humus, is made use of for the production of blue hydrangeas, with more or less success. The soil has been analyzed and found to be chiefly silicious in its nature, but very rich in humus and organic matter, including nitrogen and with a fair proportion of phosporic acid and iron. Potash and lime are in very small proportions, so that it is recommended to grow the plants in soil destitute of lime.—Gardeners' Chronicle.

CARNATIONS ROOTED CUTTINGS

NOVELTIES—This Year's Introductions

Mrs. Theodore Roosevelt. A brilliant shade of deep cerise pink, flamed with carmine. Finely formed, average 3 inch flower on strong stiff stems. Habit vigorous, early, free. Fragrance, strong clove. Selected, strong, well-rooted cuttings now ready. $12.00 per 100; $100.00 per 1000.

Alpine Glow. A deep salmon pink on opening, which finishes a bright Daybreak tint. Good sized bloom, averaging 2¾ inches at this season of the year. Flowers of great substance and a splendid keeper and shipper. An extra vigorous grower; early, profuse and continuous bloomer. Cuttings taken last April produce plants carrying 25 to 30 blooms by the first of March. We believe this will prove one of the most profitable of the daybreak colored carnations. We shall have the following rooted cuttings ready for delivery at the dates specified: March 15th, 2,500; March 21st, 5,000; April 5th, 5,000. Price, $8.00 per 100; $75.00 per 1000. Quantity limited to the above.

Lillian Pond 2,000 selected plants from 2 inch pots, ready for immediate delivery, $10.00 per 100.

Her Majesty From 2 inch pots, March 10th to 15th delivery, $10.00 per 100.

Mention the Florists' Exchange when writing.

LILLIAN POND

THE grand new white Carnation. Far ahead of any white yet introduced. Large, heavily built flowers, very fragrant and an exceptionally good keeper.

It has given us thus far this Winter more flowers to the plant than White Cloud or Queen Louise and is bringing, in the Boston wholesale market, $5.00 and $6.00 per 100.

An early and continuous bloomer, strong grower, and lifts well from the field.

Certificated and awarded 90 points by the Judges of the American Carnation Society at the Brooklyn Exhibition, February 19 and 20, 1903.

Received Certificate of Merit from the New Jersey Floricultural Society, February, 1903.

Our large stock of 24,000 plants enables us to send out nothing but strong healthy cuttings. All orders filled at short notice.

PRICES: 12, $1.50; 25, $3.00; 50, $5.00; 100, $10.00; 250, $23.00; 500, $37.50; 1,000, $75.00

S. J. REUTER, WESTERLY, R. I.

Mention the Florists' Exchange when writing.

THE QUEEN

THE MOST PROLIFIC WHITE CARNATION TO DATE, bearing a 3 to 3½-inch bloom on a long rigid stem. A fine keeper and shipper. The calyx never bursts, and no poor flowers. Prices, 100, $10.00; 250, $22.50; 500, $37.50; 1000, $75.00. FOR SALE BY

The annual meeting of the Brooklyn Horticultural Society occurs in the Germania Club, 120 Schermerhorn street, Brooklyn, on Wednesday evening, March 4, 1903, at 8 o'clock. Matters connected with the recent carnation show will also be discussed. A large attendance is asked.

THIS WEEK'S SUPPLEMENT.

Ulmus Campestris Superba.

Those of our readers familiar with the growth of our native elm, U. americana, will observe at once the great difference in growth between it and the one we illustrate. In the common one the growth is always much more pronounced toward the top of the tree, often quite vase-shaped. In this one it is of quite an opposite character, being broader at the base, and the whole growth quite unlike that of the elm as we are accustomed to see it.

The Belgian elm represented in the illustration is in many respects a remarkable tree. It was planted by George Ellwanger, of Rochester, N. Y., in 1841, as a one-year bud obtained from the late Louis Van Houtte, of Ghent, Belgium. The dimensions of this noble tree are as follows: Girth at 20 inches from ground, 14½ feet; girth at 4 feet from ground, 16 feet 10 inches; girth of largest bough, 7½ feet from the ground, 6 feet 7 inches; girth of next largest bough, 7½ feet from the ground, 6 feet 4 inches; girth of smallest bough, 3 feet 5 inches; height, 70 feet; spread, 85 feet 7 inches.

This specimen, whose overarching branches almost sweep the sward, has seven huge limbs, forking at from four to six feet four inches from the ground. Its dimensions give one an idea of its extremely rapid and vigorous growth, although the figures and pictured representation are inadequate to express its living amplitude, as well as the symmetry of its vast green tent in Summer and the pomp of its great gilded October canopy.

The common form as it grows here attains a great height, with a growth not as graceful as our native one, U. americana. Up to a recent time there were some very large specimens of it on the Chew Estate, the old battleground of Germantown. These were fully 75 feet in height. The trees became so subject to the attack of the elm leaf beetle that the owner had them chopped down, much to the sorrow of those who loved to look on grand old trees.

The beautiful specimen of the variety superba which we have the pleasure of illustrating is on the grounds of Ellwanger & Barry, Rochester, N. Y., a place famous for many noble specimens of trees. In appearance it is not as we usually see elms. Being a variety of campestris, it may be that its variation in growth from the type was what led to its recognition and propagation. The difference strikes us in its low-branched, bushy character, and its generally rounded outline. In this respect it differs from the type, and to its advantage. It appears to fit admirably the position it occupies, and it must afford very much pleasure to its owners and all who may see it.

These varieties of elms can rarely be induced to reproduce themselves from seed, but have to be propagated by budding, grafting, layering and other methods. The nurseryman who undertakes to keep up a complete collection has his hands full, there being no fewer than twenty varieties of U. campestris alone, not to mention the many other species and varieties.

JOSEPH MEEHAN.

Carnation Lillian Pond.

Through an inadvertence it was stated in last week's issue that the variety Governor Wolcott had been certificated by the American Carnation Society. The name of the variety should have been Lillian Pond, exhibited by S. J. Reuter, of Westerly, R. I., it scoring 90 points.

Other varieties certificated were: From L. E. Marquisee, Syracuse, N. Y., Sunbird, which scored 87 points; Albatross, 90 points; Flamingo, 90 points.

From H. Weber & Sons, Oakland, Md., Governor Lowndes, which scored 91 points.

CHANGES IN BUSINESS.

CHAPPAQUA, N. Y.—A. Arthur Lewis is going into the florist business here.

WASHINGTON, D. C.—George H. Cooke, late with J. H. Small & Sons, has opened "The Flower Shop," at 1126 Connecticut avenue.

MAGAZINES RECEIVED.

FLORAL LIFE; published monthly by The Floral Life Publishing Company, 812 Walnut street, Philadelphia, Pa.—This new magazine is "devoted to Nature and Ornamental Gardening," and the first number to reach us (No. 2) demonstrates quite conclusively that the journal is destined to fulfill its mission admirably. The editor is S. Mendelson Meehan, whose name is of itself a sufficient guarantee that the magazine will be conducted along practical and sensible lines. The February number contains articles from such well-known writers as Robert Kift, William Tricker, the editor; Ernest Heming, Thomas H. Douglas and others. It is beautifully illustrated with large half-tone engravings. The price of Floral Life is $1.00 per year.

COUNTRY LIFE IN AMERICA. Publishers, Doubleday, Page & Co., New York. Price, $3.00 per year; single copy, 50c. The March number of this beautiful magazine is designated "A Gardening Manual," and is surely the most handsome publication that has appeared anywhere devoted to the subject on which it treats. The cover illustration is a rose design in color; the numerous half-tone pictures reproduced from photographs of garden scenes are appropriate and charming, and the accompanying text is of a highly practical and instructive character. The list of subjects dealt with is a comprehensive and varied one, each being handled by an expert.

Country Life improves with every issue, and through it interest in the garden craft is bound to receive a stimulus superior to that created by any similar periodical of its class. And in the culmination of this condition the typography, illustrations and general makeup of the magazine play a most important part.

Obituary

M. Nabonnand.

M. Gilbert Nabonnand, the famous French rosarian, died recently at Mandelieu, Alpes Maritimes, in his 76th year. He graduated from Guillot of Lyons and in 1861 founded a nursery at Golfe-Juan. Among the roses sent out by him are Bardon Job, Paul Nabonnand, Papa Gontier and many others.

Robert F. Umstead.

Robert F. Umstead, of Goshen, O., died Thursday, February 5, 1903, from the effects of an attack of paralysis. The deceased was born in Montgomery County, Pennsylvania, on March 30, 1828. In May of 1843 he came to Ohio and settled on the farm where his death occurred. Mr. Umstead gave up farming a number of years ago, as his health would not permit of his performing his duties. He then established a greenhouse on his farm and devoted his remaining years to the cultivation of flowers.

FIRES.

PORT HURON, MICH.—The store of the Asman Floral Company was damaged by fire on Wednesday, February 18.

NEWARK, N. J.—The greenhouses of Henry Rudolph, of Roseland avenue, Essex Falls, were almost totally destroyed by fire on the evening of February 9. The loss is about $1,000, with no insurance.

PATERSON, N. J.—The store of Edward Sceery, at 89 Van Houten street, was destroyed by fire early on the morning of February 18. The loss is estimated at from $8,000 to $10,000, on which there is about $2,000 insurance.

SUPERIOR, WIS.—On February 19 fire destroyed the boiler house and heating plant of Miss L. O'Sullivan's greenhouses at Billings Park. The loss is stated at between $2,000 and $3,000, with no insurance. The greenhouses were only completed about a month ago.

PASSAIC, N. J.—Through a fire, which occurred on Thursday, February 19, the florist store of W. Hundertmark was completely destroyed. He carried about $600 insurance, but his loss will be double that amount. He will use the basement of the post-office until repairs to his store are finished.

New York.

The Week's News.

At the banquet given to the American Carnation Society in Brooklyn last week there was quite a representation from the New York wholesale district, and these gentlemen are now free to admit that Brooklyn is somewhat of a place, and that the Horticultural Society of that borough did itself proud. Usually, Brooklyn is looked upon by the New Yorker as a place to sleep, but the big dinner, together with the eloquence of "Little Tim," and Park Commissioner Young, has dissipated that idea; and we are now willing to admit that Brooklyn is "it."

We overheard some gentlemen discussing the funny stories that were related at the banquet; and after Mr. Marquisee's lot had been duly analyzed, and those whose age warranted, had been sent to the hospital for old jokes (it may perhaps not be generally known that there is such an institution in this city), it was agreed that the after-dinner entertainment, on the whole, was the finest ever.

The visiting ladies at the Carnation Society's convention were well entertained while in Brooklyn, and they each and all expressed great satisfaction of the pleasures they had received at the hands of the committee having the matter in charge, Mrs. A. H. Langjahr, Mrs. J. V. Phillips and Miss Mellis. Those ladies who enjoyed the dinner and theatre party on the Friday evening were Mrs. W. Nicholson, Miss S. Nicholson, Miss Warth, Mrs. John Barr, Mrs. W. N. Roland, Mrs. W. J. Vesey, Mrs. J. Bauer, Mrs. Morrison, Mrs. W. F. Kasting, Miss Hagenburger, Mrs. M. A. Patten, Mrs. Fisher, Mrs. R. Vincent, Jr., Miss L. M. Powell, Mrs. J. Hartshorne, Mrs. E. C. Ludwig, Mrs. Wm. Plumb, Mrs. H. Goldner, and Mrs. W. L. Castle.

R. Shannon, who has charge of the florist store of his father at Fort Green Place, Brooklyn, lost a little daughter recently, the child being a victim of diphtheria.

There is one bogus check man, who has been checkmated promptly, and he will probably think twice before he attempts to work the racket again among the wholesale florists. Geo. Saltford, wholesale florist at 46 West 29th street, a few weeks ago cashed a check for $20 for J. Wiesman, and signed by him. The check was returned as "N. G." from the bank, and Mr. Wiesman was arrested. The case came before Magistrate Zeller of the Harlem Court, and through the pleadings of the prisoner's family and of a promise to make the check good, Mr. Saltford withdrew the charge.

Sidney Nash, who has charge of the books of Moore, Hentz & Nash, arrived from England on the steamship Menominee, Thursday, February 19, whither he had gone with a younger brother a few weeks ago.

There seems to be an epidemic of abnormally large violets, and it may be possible that a new and larger strain of flowers will ultimately result if some of the growers can only fix these large flowering kinds that keep recurring. This week Wm. Ghormley has been the recipient of a few of uncommon size and length of stem, and, of course, they sold at a fancy price.

A. Wollmers, florist, 25th street, Brooklyn, has had a long siege of sickness, and he is not recovering as rapidly as his family would desire.

Chas. Zeller, the veteran Flatbush florist, was, unfortunately, unable to attend the Carnation Society's meetings on account of poor health. He sent a letter expressing regrets at his inability to be present, full of reminiscences of Brooklyn's early shows and its horticulture generally.

C. Ponnet, of C. Ponnet & Co., florists, Alexandria, Va., was in town this week.

Harry Van Koolbergen is in town, representing Ottolander & Hoftman, nurserymen, Boskoop, Holland. After two weeks' stay here he will proceed on an extended Western trip.

Robert W. King, of the King Construction Co., Toronto, Canada, was also in town this week.

Mr. Marquisee informed us that he took orders for 105,000 rooted cuttings of the carnation Flamingo before he left the exhibition hall last week.

Review of the Market

NEW YORK. While the cut flower business was as good as could be desired on Monday, that day being a general holiday in commemoration of the birthday of the "Father of our country," it cannot be said that there has been much doing since, except in the way of slaughtering prices in order to move the stock.

As is usually the case at this period of the year, there is great influx of bulbous flowers, these are so plentiful and cheap at present that other staple stock is for the time being relegated to the rear, and the Spring flowers are given the preference. Business fell away considerably on Tuesday, on Ash Wednesday it was worse, and on the following morning it was too apparent that the market had gone to pieces. There was no longer any standard price for anything. American Beauty roses were freely offered at 25c. each, and many specials that had been on hand a day or two went for less than half that figure. The best Bride and Bridesmaid got down to 8c. and 10c. each for asking prices, but could not be moved at all scarcely. But No. 1 and No. 2 cleared out somewhat better at prices ranging from 2c. to 4c.

Violets are losing in quality, but are too numerous for the demand. The weather being mild, the street vendors are showing a taste for daffodils and such like Spring blossoms, and seem inclined to leave the violets alone for the time being.

Cattleyas are not so plentiful, and there is just about demand enough to use up the supply.

Lily of the valley continues at the same figures as heretofore, though the quantity is diminishing. Lilies of various grades are on the market, and there is a considerable number that are badly diseased. Lilac does not move well; neither do sweet peas, unless they are very fine. The call for green material of all kinds is considered fairly good, the prices on smilax, ferns, and asparagus continuing unchanged.

BOSTON.—Business held up fairly well during the last week prior to the Lenten season, but Ash Wednesday there was a decided falling off in the demand, while the supply increased perceptibly after three fine bright days of sunshine. A break in values, of which there was a slight suggestion Wednesday morning, may soon be expected. Roses are in crop now, and the quality rules generally good. American Beauty of the finer grades are not over-plentiful, but the small and medium sizes are in good supply; the demand for them, however, has continued satisfactory, and, as a rule, they have cleaned up pretty well. Prices on the small and medium grades have been shaded somewhat, but, in general, last week's values have been pretty well maintained.

The increase in supply has been most noted in carnations, and though as yet there has been no overstock, it is evident that with a continuance of such weather as we were favored with during the early week a cut in prices will be necessary to dispose of the stock. Good carnations of ordinary sorts make $3.00 per 100, with the better grades at $3.50 and $4.00, while fancies and novelties go to $5.00, and in remote cases $6.00 is reached.

Bulbous stock has become druggy, especially in yellow flowers. Princeps are freely offered at 20c. a dozen, as are some Von Sion, though the better grades of the double variety make $2.00 per 100. Golden Spur, when good, realizes $4.00 per 100 readily, though some stock, slightly inferior, is sold at $3.00 and $3.50. Tulips are in good supply, though not nearly so plentiful as jonquils, and clean up more easily at $2.00 to $4.00, the latter figure being maintained for a few good flowers of the double varieties. Lilies are plentiful at $10.00 to $12.50. Lily of the valley is druggy at $2.00 to $4.00. Asparagus, mignonette, adiantum, etc., have been scarce and sell well. Violets, too, are very plentiful, and move with more difficulty than for months past at from 40c. to 60c. per 100, though 75c. is obtained for some fancies. Pansies, primroses and sweet peas in small bunches sell well.

F. J. N.

CLEVELAND, O. Business is a trifle easier, the cut is increasing, and as a result prices have begun to weaken. At a recent funeral of one of Cleveland's best citizens, the display of flowers was the largest that has come to my notice in a long time. The deceased was J. S. Dickel, a man interested in many of Cleveland's enterprises, and he was remembered by all his business associates and friends. Forty-two large designs besides twice that number of smaller ones and loose cut flowers enough to fill one wagon, were sent to the house. This has a tendency to make flowers scarce. G. W. S.

BALTIMORE. Stock has been very scarce, especially white roses and white carnations. Prices have been very firm and high. Violets are now more plentiful, with no extraordinary demand for them. Plants for Easter are looking well.

E. A. S.

INDIANAPOLIS, IND.—The cold weather was an effective check on business the early part of the week. Friday and Saturday the weather moderated and orders came in in numbers. A large amount of funeral and some decorative work have kept the store-men hustling. As a rule, there has been enough of all kinds of stock to meet the demand. Roses are in good condition. Bridesmaid, Bride and Meteor sell at 6c. to 10c. wholesale; $1.50 to $2.00 per dozen, retail. Liberty, at 15c. to 20c., wholesale; $3.00 to $4.00 per dozen, retail. American Beauty are in prime condition, 5c. to 50c., wholesale, $2.00 to $9.00 per dozen, retail, is the price for them.

Carnations are more plentiful than for some time past, although there still remains a scarcity of good red and white sorts; 2c. to 3c. wholesale and 75c. per dozen, retail, are the prevailing prices.

Bulbous stock of all kinds is plentiful. Many are sold at 75c. per dozen.

There is a decrease in the demand for violets, and it is only a question of a short time when there will be a large surplus.

Callas and Harrisii lilies are plentiful at 12½c., wholesale; $3.00 per dozen, retail.

I. B.

CHICAGO. There has been a noticeable increase in all lines of stock coming into this market, but the demand has been greater than the supply, due to the augmented shipping trade to New Orleans on account of Mardi Gras.

Carnations are arriving in increased quantities every day, yet the market is fairly well cleaned up. The past week the prices realized have been higher than ever known before at this time of year. Almost any kind of a flower commanded $3.00 to $4.00 per 100. Tuesday values were not so firm.

Bulbous stock is still largely in evidence; sales of same are not as good as at last report, with prices about the same. Lilac is bringing from 50c. to $1.00 per dozen. Some very fine orchids are seen. Cattleyas bring from $5.00 to $6.00 per dozen; Cœlogyne cristata, $25.00 per 100; cypripediums, $2.50 to $3.00 per dozen.

Violets are yet a drug on the market, it being hard to clean them up at satisfactory prices.

R. J.

PITTSBURG.—The coldest spell of the Winter was the record for last week, the thermometer going below zero, in some places as low as 10 degrees below. In spite of the cold weather business held out well, and sufficient stock was on hand for all orders. Roses and carnations still command good prices, and are not yet plentiful. Perhaps the Lenten season just set in will change conditions somewhat. Tulips are coming in well now, selling at $4.00 per 100 for choice. Yellow narcissus is more plentiful, but too high in price to make quick sales. Lilacs are fine and in good demand. Callas and Harrisii lilies are to be had in sufficient quantities. There are not nearly as many of the latter as in other seasons. Violets and mignonette are in good demand. Sweet peas go fairly well.

E. C. R.

PROVIDENCE, R. I.—Business is very good, completely using up all kinds of material and yielding firm prices to grower and retailer. There has been a small decline in the figures for roses and violets, but carnations and tulips hold their own for another week. There are only a few Roman hyacinths and no narcissus to speak of. The weather is now clear and mild, with every prospect of continuing so for a short time at least.

C. S. M.

Philadelphia.

The Week's News.

The Florists' Club committee had an interview on Wednesday with the Adams Express officials in regard to the extra rates. They promised to take up the matter with the higher officials.

George Carpenter, of 60½ street and Girard avenue, has 200 plants of isoloma; I do not know which variety it is. These plants are seldom seen, and are quite a novelty. They belong to the gesneria family. The plants are now coming into bloom, and no doubt will sell in limited quantities.

The Florists' Gun Club gave a complimentary banquet on Tuesday evening at Dooner's to C. J. Rainear, who some time ago presented the club with a flagpole for their grounds at Wissinoming. About twenty members were present at the banquet.

Jacob Becker is doing very well with his new rose Ideal, and has a nice lot of young plants. His pot roses are very good this season. He has large blocks of the following varieties, which he is bringing in for Easter: American Beauty, Magna Charta, General Jacqueminot, Hermosa and Clothilde Soupert. Just at present the most interesting thing on his place is a batch of Lilium Harrisii, Japanese-grown bulbs. These are very good, about 18 to 22 inches above the pot, clean and healthy in every respect, and well set with buds, all having from five to eight. The bulbs were the 7 to 9 size and were purchased from Henry F. Mitchell. While all the longiflorum lilies in the same house are good these L. Harrisii are far superior. Not a plant has been thrown out.

John Walker and family, of Youngstown, Ohio, spent the week here visiting relatives and friends. On Monday last we had the following visitors in town, who had been on to the Carnation Society's convention: Messrs. Rudd, Wilson, Foley and Goodman, of Chicago; F. H. Lemon, Richmond, Ind.; F. Dorner, Jr., Lafayette, Ind..

W. R. Shelmire has been engaged by H. H. Battles to take charge of his greenhouses at Newtown Square, Pa.

DAVID RUST.

CARNATIONS

American Carnation Society

TWELFTH ANNUAL MEETING

Brooklyn, N. Y.

February 19 and 20, 1903

SOME NOTES ON THE RECENT SHOW.

To write up in detail such an exhibition as was held at Brooklyn, N. Y., last week is too great a task for one, but I shall attempt to tell you a few of the things which came to my notice and to bring before those of my readers who were not present there a few of the varieties which were especially prominent among the new ones. For what I fail to do I ask pardon; and let me state first of all that the following opinions are not based on the awards, for I do not, except in a few cases, remember who took which, and what took what.

The sensation of the show was a variety which Mr. Marquisee, of Syracuse, N. Y., has had "up his sleeve," and it certainly was the center of attention. It is a brilliant scarlet flower and has been christened Flamingo. It seems that this variety has been grown by Mr. Marquisee for several years, but he has waited with it until it could be introduced in style becoming such a beautiful bird. It is interesting to note that without soliciting an order Mr. Marquisee booked demands for 100,000 plants in less than a day, for 1904 delivery.

In the line of scarlets there were several which showed to advantage, among them Apollo was next to the variety mentioned, Flamingo, in my opinion, while the far-famed Adonis was not up to the standard of last year. E. Shepherd, one of Mr. Roper's, I believe, showed up well, while J. H. Manley and Challenger were not far behind in all but color, Adonis winning for color and yet Flamingo was nearly as good in this respect and apparently better in every other.

Among the crimsons, to come down to personal opinions, we have yet to see the better of Governor Roosevelt. President Roosevelt and Harlowarden in size and length of stem were far ahead, but in form and color, I believe, Governor Roosevelt still leads.

There were several good yellows shown and Mr. Marquisee's Sunbird attracted considerable attention. Dorothy Whitney was shown, very fine specimens of it. I do not think the Golden Beauty exhibited did justice to the variety. A vase of Eldorado, grown by Dailledouze Bros., showed the possibilities of the variety and, I think, when this sort is well grown it is the best commercial yellow to-day. None can, in my opinion, compare with it when well done, but when poorly grown it can be poorer than the poorest, if such be possible.

Among the new light pink varieties Enchantress was the leader and I believe carried off the Lawson medal for the best vase of any color. It did not show up as well as it has done previously, however, though this is not, in all probability, due to a fault of the variety, for the flowers were more crushed than they were when it has been my pleasure to see it in the past. It will never completely fill the bill for a light pink, for it is a fancy of high grade, and while I predict that its popularity will be widespread and that it will be extensively grown, another light pink will supply the trade with the much-called for "good ordinary light pink carnation."

Fair Maid I must class as a fancy and it ranks high.

C. W. Ward came forward with a new one, and in this class it may prove to be what we need. It is named Mrs. John A. Thayer, and if it possesses the element of productiveness it may become one of the standards; for the blooms, while not large, were of good color and form, and the stem was all that could be desired. Miss Alice Roosevelt was a disappointment and Messrs. Dailledouze Bros. have a far better variety in Fragrance. It is deeper in color, but in every respect it appears to be a winner.

We meet a greater number of new ones when we enter the class of dark pink varieties and these aspirants have a harder row to hoe, for the general satisfaction given by Mrs. Thomas W. Lawson makes it hard for a new one to reach popular favor. The variety Mrs. Theodore Roosevelt shared the honors with the deep cerise Nelson Fisher, while the limited showing of Sibyl and President McKinley gave a poor chance for comparison. Two others, Una and Marion Buxton, showed up well, but, as I have said before, it will take a wonder to surpass the Mrs. Lawson.

CARNATION SENSATION.
First Prize Winner in Class for Fifty Blooms Any Other Color.
Exhibitor, C. W. Ward, Queens, N. Y.

Without a doubt Mrs. M. A. Patten is the coming variegated carnation. Mrs. George M. Bradt at its best cannot equal it, and we cannot all grow that variety as it should be grown. Gaiety and Marshall Field made a good showing, but where a variegated carnation is needed, we shall find, in a few years, unless I am mistaken, that Mrs. Patten has the inside track. We meet a different class of variegated carnations when we make the acquaintance of Judge Hinsdale and Viola Allen, and they were both very fine as novelties.

To sum up the white varieties is a hard undertaking, for there were so many fine ones. John N. May, of Summit, N. J., came in with The Bride, which was beyond criticism except in length of stem. Albatross, which Mr. Marquisee included in the grand trio, seemed to lack form, although it had stem to spare. A seedling without name, shown by Jerome A. Suydam, of Flatbush, N. Y., I considered the best of the lot, and it reminded me strongly of Governor Wolcott at its best. Lillian Pond was shown, but the excellence of the bloom was not backed by excellence of stem, and yet that weakness may be a fault in growing. As a good commercial white The Queen, shown by S. J. Goddard, of Framingham, Mass., is worthy of a great deal of praise. This variety, we hear, is a wonderful producer, and we must have quantity, and that variety which possesses the element of productiveness and produces flowers of an average good quality is bound to be popular. Lady Bountiful and May Naylor seem to be good ones; and yet Governor Wolcott, which we met as a last year's introduction, will allow precedence to none. The white Bradt, which were exhibited, were grand specimens, and where Mrs. G. M. Bradt can be grown successfully the white variety will no doubt be much sought for, and the benches of it which we saw at its home in Flatbush cannot be beaten in any respect. But the form of the flower does not, in my opinion, come up to the form of either The Bride or Governor Wolcott. A sport from Mrs. Bradt of a Daybreak shade which I do not think was exhibited attracted considerable attention from those who visited the Dailledouze Bros.' place, and yet it has the same limitations, for we cannot all do Mrs. Bradt well.

A grand vase of Her Majesty made the journey from Joliet, Ill., and the flowers were lacking in color only, the slight pencilling of red which characterizes it being its only drawback.

Side by side with Governor Wolcott was Boston Market, two good ones from the same seed-pod. In every respect Governor Wolcott is superior on the show table, and Boston Market bases its claim to popularity on the ground of superior productiveness. Perhaps; but the excellence of the bloom, when compared, makes Governor Wolcott the winner. So much for personal opinions.

There is a class of carnations which are popular locally and valuable as novelties, and the two which seemed to need this classification were Fair Harvard, shown by W. G. Saltford, of Poughkeepsie, N. Y., and Sensation, which Mr. Ward claims. The former is a violet-crimson and the latter variegated, on the Prosperity type. Both are odd, but interesting, and on a private place might be a source of pleasure to the owner. But, commercially, there is a question.

One thing I very much regret is, that at such an exhibition we do not see how well our standards can be grown; but rather we meet an aggregation which we know very little of. I saw a few Queen Louise, but a very few. Not a Morning Glory or The Marquis, nor a General Maceo. A few Genevieve Lord, but these were so few that they were lost among the new ones. A few Mrs. Frances Joost put in an appearance and its sister Magdala, an undisseminated variety from the same seed-pod as Mrs. Joost; but this was practically all of the varieties which the ordinary grower is handling in quantity. Would not a grand collection of such standards as Dorothy, General Maceo, G. H. Crane, Estelle, Morning Glory, etc., be more of a help to the ordinary grower, and mean more to him than so many strangers; and yet such an exhibition paves the way for the dissemination of the new ones and shows us that the American carnation is nearing perfection. What will be the limit in size? is a question; but whatever it be, we are near it. Seedlings of Dailledouze Bros., which measure nearly five inches, partially prove this, for with the great bulk the beauty has gone, and this shows that productiveness and stability are the points to work for. W. R. PIERSON.

Additions to List of Visitors.

Y.; Robert Kift, Philadelphia, Pa.; W. A. Manda, South Orange, N. J.; J. D. Thompson, Joliet, Ill.; N. D. Pierce, Norwood, R. I., and T. F. Keller, Providence, R. I.

The American Carnation Society Banquet

The banquet tendered by the Brooklyn Horticultural Society to the visiting delegates of the American Carnation Society on Friday evening, February 20, 1903, in the Germania Club, Brooklyn, N. Y., will go down in history as one of if not the most magnificent affair of its kind that has occurred since the inception of the American Carnation Society. The banquet hall and tables were beautifully decorated under the superintendence of the chairman of the decoration committee of the local society, John V. Phillips, of Fulton street, Brooklyn, who was ably assisted by the other members of the committee, and called forth many encomiums. Three hundred delegates partook of the hospitality provided. The arrangements for the banquet and its concomitants were carried out in a most satisfactory manner by the entertainment committee, composed of Messrs. Alfred H. Langjahr, Charles H. Allen, Eugene Dailledouze and Chris. Besold.

As previously intimated, ex-Lieutenant Governor of New York State, Timothy L. Woodruff, presided and acted as toastmaster. The Hon. Richard Young, Commissioner of Parks of Brooklyn and Queens, was also one of the speakers. A telegram was received from Albany from ex-Park Commissioner Geo. V. Brower expressing regret at his inability to be present.

The menu served by Herr Kuenstler, of the Germania Club, was first-class in every particular, and was thoroughly enjoyed.

In introducing the toastmaster, President Ward of the American Carnation Society said:

Fellow Members of the American Carnation Society and the Brooklyn Horticultural Society: It gives me the greatest pleasure to introduce to you to-night a gentleman whose national fame is such that he really needs no introduction at my hands. When I mention to you the name of ex-Lieutenant-Governor Woodruff (Applause and cheers) I will say that I never spoke the name of mortal man before that gave me more pleasure. Mr. Woodruff is a gentleman who is known throughout the length and breadth of these great United States for qualities that are rare, for qualities that make him endeared to every one, qualities that he possesses to such an extent that I do not think he has an enemy upon the face of the globe. (Loud applause.) These qualities are what bring him here to-night. In the past twenty-four hours I have heard him say: "I love to do good, and I came here to this banquet because I thought I could do good." (Applause.)

Mr. Woodruff, on rising to respond, received quite an ovation. The audience rose to their feet, cheering and applauding, while he himself stood smiling. When the enthusiasm had subsided, he said:

After that extraordinarily fulsome introduction I feel very much inclined to address you as fellow carnationists or fellow hybridizers. (Applause and laughter.) I have never been more surprised in my life than I am to-night. I had expected there would be an attendance here of perhaps twenty-five carnationists and twenty-five of their friends, instead of 300 wiry, enthusiastic hybridizers. (Laughter and applause.)

I do not yet know why I was selected to preside as toastmaster on this occasion. Possibly it may have been because once I was Park Commissioner of the then City of Brooklyn, but, although I served for ten long months, when I left the department I did not know where the greenhouses were located. (Laughter.) I went into the department without any knowledge of horticulture, and I was too busy building bicycle paths and roads, and improving the park system otherwise, to learn the business while I was in that department. Then I think, possibly, it may have been because I was sometimes known in Syracuse as an agriculturist, because, as former Lieutenant-Governor of the State of New York, I was president of a commission which had to do with the management of the State Fair. (Laughter.)

But it cannot be to welcome you, most of whom are from out of town, to Brooklyn, because I am not the Mayor of the city, nor the President of the Borough, nor the Alderman of this Ward. (Great laughter.) And then some newspapers have stated lately that I have moved from Brooklyn to Syracuse. (Laughter.)

I am very glad to be here. I can match all that President Ward has said as to his pleasure at my being here, by telling him and you that I never was so delighted at anything before in all my life. For Mr. Ward has told me that he named the Roosevelt carnation, and it was that, and that alone, that made Mr. Roosevelt President of the United States. (Laughter and applause.) And Mr. Ward is going to name a carnation Governor Woodruff. (Laughter and applause.) So I think I can safely impart to you in confidence my delight. (Laughter.) And by your reception I am still more pleased than by anything Mr. Ward has said. I am quite sure if you were going to name a carnation for me you would call it "Tim." (Great laughter.)

Now I have never seen such an enthusiastic lot of men in all my life. I do not know ten of you, at least ten of you don't know me. There was no occasion for any such enthusiasm. I tell you, I know nothing about flowers or carnations whatever, except to admire them; and yet, as soon as I am introduced, you get up and show an enthusiasm which I am not accustomed to. (Laughter and applause.) It all leads me to believe that that enthusiasm is inherent in the propagation of the carnation. (Great laughter.)

But I want to be serious for a minute, and to suggest to you that you go slowly in the development of this beautiful flower, not allowing your exuberance and enthusiasm to carry you too far, bearing in mind that the raising of tulips in Holland, 200 years ago, bankrupted all the people of that nation. (Laughter.) Even wrecking one man's fortune, when a tulip bulb for which he had been offered $25,000 was eaten by a tramp for an onion. (Laughter.) They cannot get away with the carnations as easily as that. (More Laughter.)

It has been a tribute to our borough, which has been thoroughly appreciated, to have the meeting of the American Carnation Society held in this year of its greatest prosperity here in our midst. Our people must have learned something more of the variety of carnations which you have exhibited here. I certainly have learned much, and have been reminded of what I sometimes before have been cognizant of, that there is a mighty sight going on in the world that most of us know nothing about. I had no idea, and if any man had told me that there was an organization in the United States as enthusiastic, as earnest, and as successful in the propagation, in the cultivation and development, in its various forms, of any flower, I would not have believed him for a minute. And it has taken this ocular demonstration to satisfy me that such is within the limits of human possibility. (Loud applause.)

Gentlemen, you have got a wonderfully successful, aggressive organization for the accomplishment of a work that is bound to benefit all mankind, or at least every man and woman who has a spark of sentiment and love for the beautiful things of nature; and therefore it is that I feel rejoiced to have met you; to realize that there is an organization accomplishing such a great purpose.

The first time, I think, that my attention was more particularly attracted to what I had always called the "pink" (Laughter) was when I saw it worn in the buttonhole of the most beloved of the many Presidents of the United States, the late William McKinley. (Loud applause.) I think I never saw him in the White House without a beautiful pink. (A voice: "Carnation, Mr. Woodruff!") Well, we used to call them "pinks." Even when he had given you one out of his buttonhole, he managed to appear before you with another, for he went to his closet, and, taking a flower from the shelf, put it in his buttonhole. It seemed to me, as I thought of that to-night, that the carnation is particularly emblematic of the life and character of that man whom we all so much revered.

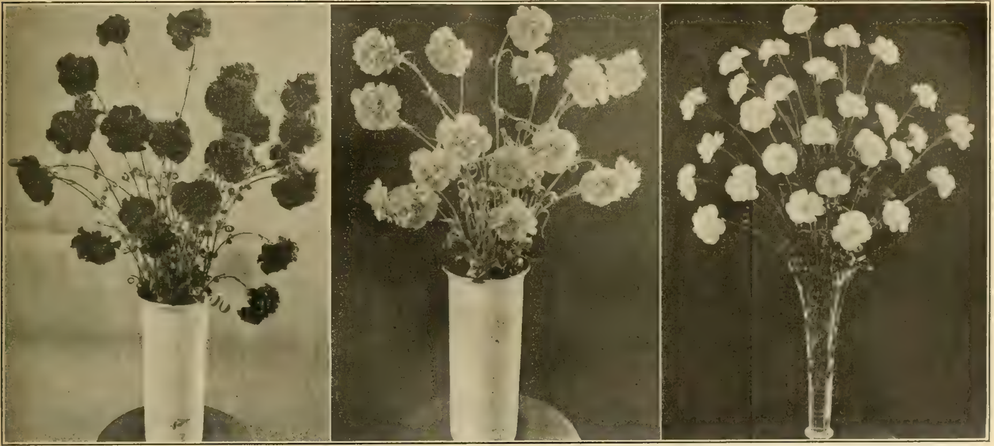
Mr. Ward has told me to-night that only a comparatively few years ago it was a little, mauve-colored flower in the south of Europe; and, until a little while ago, when he began the propagation of this plant by those approved methods of cultivation and hybridization, it was the little flower which we plucked in the garden. And when one recalls how it decks the landscape and sweetens every Summer day, even in its original and wild condition, and realizes that, as it has been brought into contact now, through its development, with the lives of men, then having added to all the beneficence of its surroundings, one realizes that it is the ruggedness and perseverance of the flower, as it was the character of McKinley, that made his memory what it is to us and made the sweetness of the carnation what it is and what it ever will be to all the world. (Applause, loud and continued.)

It is now my pleasure to introduce to you the present Park Commissioner of the Borough of Brooklyn, who needs no introduction to men interested in the cultivation of flowers, for he knew where the greenhouses were before he became Park Commissioner. (Much laughter.) And now, after only one year's service in the department, he has the reputation of being the best Park Commissioner Brooklyn ever had. (Applause.)

Hon. Richard Young said: Your president has well said that ex-Lieutenant Governor Woodruff is well and favorably known; and the Governor very modestly stated he was not accustomed to such enthusiasm. I have known him since we were boys together; he is younger than I —not much (Laughter), and in the last ten years I have never attended a gathering where his reception was not somewhat similar to that given him to-night. And he deserves all the kind words and demonstration you have given him, because in every business to which he has been called, from very early manhood to the present time, he has proven himself admirably qualified, and the most popular Lieutenant-Governor New York State has ever had. (Applause.)

I, too, knew little of your organization, or of the progress which you have made, until I came here last evening to welcome you to the Borough of Brooklyn; and it was a great delight to me to find such a number gathered in such an interest, and in such a cause.

And in going from here to the Academy of Music I was more than delighted at the wonderful exhibition of your work. It was a revelation to those who were present. I do not think there was anyone, except those engaged in your calling, who knew what you were doing until



FLAMINGO. SUNBIRD. ALBATROSS.

New Varieties of Carnations Exhibited by L. E. Marquisee, Syracuse, New York, at Brooklyn Show.

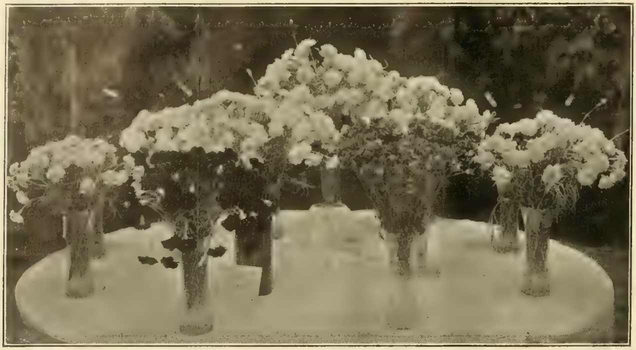


EXHIBIT OF DAILLEDOUZE BROTHERS, FLATBUSH, N. Y.
At Brooklyn, N. Y. Carnation Show.

they had seen last night the grand exhibition you made, which has proven such an attraction, that all the newspapers, so far as I have seen them, have been full of reports of admiration of your work. (Loud applause.)

But the matter assigned to me to-night is not to speak to you on your work, or your exhibition, or of the carnation alone. The text of the toast reads: "The Relationship of Flowers to Art." My friends, there can be no closer relationship than flowers to art, except it be the mother to her child. From the very earliest days they have stood side by side, or marched hand in hand, up to the present time. How closely they have been allied has not, perhaps, impressed itself upon many of those who are here, but I was very much impressed some four years ago when paying a visit to Egypt, for there I realized how long and how intimately art and flowers have been associated. In the museums there I found the sarcophagi marked with flowers, painted and decorated. The sarcophagi of Rameses II., which dates back 5,000 years, was decorated with flowers. And perhaps the most remarkable illustration of the relationship of flowers to art is to be found in Pompeii. While visiting that excavated city a few years ago they were unearthing a house, and as the walls crumbled into ashes, there were displayed the most beautiful works of art that had ever been seen in the portrayals of flowers on the walls. The colors were as fresh as the day when they were painted—the most marvelous thing of the times. A few years ago I visited ancient Ephesus. There they were making excavations as in Pompeii. You hear little of ancient Ephesus, but if you visited it to-day you would find carved on the stones and painted on the walls which have been buried two thousand years, the flowers of the times.

And so they came down through all the ages hand in hand, and there has never been a time when flowers and art were separated. I do not believe that true art can exist in any soul unless there is a love of flowers there. (Applause.)

You pass through the great galleries of Europe, in Rome, in Florence, in Venice, wherever they exist, and you will find the old masters alive to-day because of the portrayal of flowers in their art. You go to Japan, and the most ancient of their art is the cloisonne work, the placing of flowers in metal, polished to a perfection that makes it the finest art that has ever been produced by mortal man. To-day you will find these men in Japan, sitting at the most minute work, inlaying the flowers in gold and silver and the precious metals, and polishing it to send it to all the ends of the earth. The state of refining art, and the culture of the people, which has lived for thousands of years, is to-day as prosperous and as vigorous as they were five hundred or a thousand years ago. And so it is in China, and in other parts of the earth, art that portrays anything, portrays first flowers.

You who are not so deeply interested in this work will not realize, perhaps, how closely art and your great profession stand together. My friends, there can be no art without flowers; it is an utter impossibility, it is inconceivable. To-day, with the student in school, the first step in art is the illustration of flowers. I have been connected with school work here for a number of years. I go into a school room and the first step I see on the blackboard is the illustration of flowers a carnation, a rose, or what not? And so it is, and so it will be, as long as man shall have his reason; as long as man shall recognize the beautiful he cannot but recognize the flower as the ideal, the one thing that will enrich art, as long as art shall stand. In the galleries of France, of Germany, and of England, everywhere art and flowers are portrayed together. There is no separation of them.

You are in a great work; in a great profession. There is nothing so elevating, no work that I can conceive of, so elevating as flowers. Oh, how much I see of it every day. I have taken particular care in the cultivation and in the extensive planting of flowers and bulbs. I want to give you just one illustration: Last year it became my duty to create a park at Coney Island. I planted there more than 16,000 plants and shrubs and flowers in a comparatively small park. Notwithstanding it was sandy land, we put upon it nearly three feet of soil, cultivated it carefully, and in six weeks it was a finished park. And upon the 15th day of August there were more flowers in Seaside Park than in any other park in Greater New York of its size. (Applause.) And in the Fall it became my privilege to put in 30,000 bulbs in that park, and nearly 200,000 bulbs in the park department, of which I have the honor to preside over. The displays of flowers in Prospect Park, especially, and in all the parks of this great borough and the Borough of Queens, will be greater than they have ever been before, because I recognize it as an education; because I deem it one of the greatest upbuilding influences in a community. I know where flowers are planted purity of thought exists; where flowers bloom, there comes a higher and more elevating spirit and thought. (Applause.)

I therefore recognize the work which you are doing; I recognize that you are helping humanity by the great and noble calling that you are following, and bringing to success. The flower exhibition that you gave to-day and yesterday at the Academy of Music has been an education to our people. You have accomplished a great work here; you have familiarized our people with what you are doing; and to-day the carnation stands higher than it did a week ago because of our people having had the opportunity, without money and without price, because of your generosity, of viewing one of the finest exhibitions that was ever presented on the face of the globe (Loud applause), because I know that these flowers which you have placed on exhibition are in a state of perfection never before obtained. And that applies to nearly all flowers. The chrysanthemum to-day is not the chrysanthemum of ten or fifteen years ago; it has reached a state of perfection that is wonderful. It has become the admiration of the people. And this same condition is existing in the rose and various others. You are bringing all to the highest state of cultivation. You are educating and elevating the people, and you are doing your duty faithfully and well. (Loud and continued applause.)

Mr Woodruff I know that I cannot, with propriety, introduce to the members of the American Carnation Society the gentleman whose name is next on the toast list, to respond to the toast, "The Influence of the Carnation and Other Flowers on the Ethical Side of Life," but to those who do not know him, who may be among the guests of your Society, I do want to present the man who has sat one removed from me at this table, and whose face indicates not so much the Quaker of Pennsylvania as it does in itself the ethical side of human life—Mr. Robert Craig. (Loud applause.)

Mr. Craig, on rising to speak, was given a most cordial reception, the applause being loud and continued. He said: Before proceeding to say anything on the subject of the toast, I want to express the pleasure which I know everyone present feels in having with us the ex-Lieutenant-Governor of the State, and the other friends who honor us with their presence to-night. When Mr. Woodruff spoke so feelingly, so truthfully, and so beautifully of the late President McKinley, he struck a responsive chord in the hearts of everyone here. (Applause.) Mr. McKinley's memory is very dear to the carnation growers also to everyone interested in horticulture in every branch. I may say, for the information of those gentlemen who have honored us to-night with their company, that the Carnation Society is the offspring of an older society known as the Society of American Florists, of which Mr. John Burton is president I may tell them that we have a charter from the National Government under which we hope, as time rolls on, to do good work, and it will be pleasant for them to know, as it is to us, that the late Presidem McKinley signed that charter, which his predecessor, for some reason not to be explained by me, declined to do. Now we have the ex-Lieutenant-Governor of the State with us to-night, and we hope to see him occupy the Presidential chair (applause and cheers), and then we know we shall have a friend at court; and when we want to go further with our charter to do greater work under that charter, we are sure of his aid. (Applause.)

At the present time the Department of Agriculture and horticulture comes properly under that Department issues bulletins telling the people what kind of potatoes will do well in certain sections, and what kind of beans, wheat and other cereals will do well in different localities; and we hope to live to see the Government send out bulletins stating what roses will do well in the Southern States, what varieties of roses will be hardy enough and flourish well in the Northwest. We consider that information is just as valuable as the information now being sent out by the department. We consider that food for the soul is just as important as food for the body, and we hope some day our friends will endorse this view when we attempt to widen our sphere in that direction.

I am asked to respond to the toast, "The Influence of the Carnation and Other Flowers on the Ethical Side of Life." You will agree with me that I have not an easy subject to handle. No one yet has been able to define beauty in the abstract, and no one has given us a comprehensive definition of ethics in the abstract. I suppose the committee, in giv-

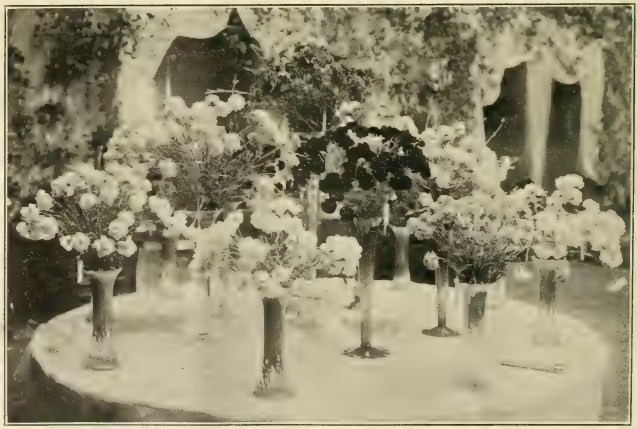

EXHIBIT OF C. W. WARD, COTTAGE GARDENS, QUEENS, N. Y.
At Brooklyn, N. Y., Carnation Show.

CARNATION ENCHANTRESS, WINNER OF THE LAWSON GOLD MEDAL AT BROOKLYN, N. Y., SHOW.

Exhibited by Peter Fisher, Ellis, Mass.

ing me that subject, thought that I would proceed at once to say that contact with flowers would immediately make a man better, or a woman better, beyond measure. Now, knowing the carnation men as well as I know them (Laughter) by what mental process can I accomplish that fact (More Laughter). I know there may be something said of the moral effect of beauty, and I expect to say a word or two on that aspect of the question before I sit down, but I want you to pardon me if I indulge in a few horticultural reminiscences of Brooklyn.

A quarter of a century ago I was a more active man than I am now, and I used to go frequently to Brooklyn, for that city was the head center of carnation culture at that time. The greatest carnation man in the country then was Papa Zeller, that dear, good man whom we all revere, a credit to the profession and a credit to mankind. He had, more than a quarter of a century ago, gathered all the varieties of carnations he could get, and he had them under cultivation, and I was interested in them at that time. I recollect he had one called Horace Greeley, and one named Henry Ward Beecher, for the custom was then, as it is now, to name good carnations after prominent men, and some day we will have one named after Timothy Woodruff (Applause).

We had also, at that time, a great grower of plants who lived in Brooklyn, or in Flatbush. I allude to Wm. Bennett. I think beyond all question he was the greatest grower of plants we ever had on this side of the Atlantic, not only of carnations, but other plants as well. He so loved and so studied their nature that whatever he undertook to grow was grown, as well as it had ever been grown before, or since. I can recollect one house of carnations cultivated by him. We may see good carnations grown now, but none better than he grew them, some scarcely so well, because he gave them more rational treatment than we give them. He recognized that the carnation was a plant that needed a season of rest; and as he grew them he did not get as large crops before Christmas and at Christmas, but towards Spring he had the most wonderful display of carnations on his benches that I have ever seen. I can recollect one bench of Peerless, that was a magnificent sight, and a bench of Mrs. Joliffe; and you could not see the foliage of the plants for the blooms. But that was towards Spring.

I believe the first man who forced carnations and had them early in the Winter was Mr. Gus Messeberg, of Flatbush. I recollect a remark of Mr. Westcott, who was at that time a very active man in the business, and who frequently visited Flatbush. He said: "Bennett has them all right, but he does not get them when there is big money for them." He expressed the opinion that Messeberg was making more money by forcing the plants into bloom early in the Winter at the time when the price was high; and this has come to be the practice, generally, of carnation men. They consider a carnation more valuable that will produce abundantly early in January and February, than when the price drops in Spring.

I think we might find a useful lesson if we consider the carnation in its treatment, and consider the treatment we ought to give ourselves. The carnation, owing to the fast life it is leading now, being forced out of season as it is, is subject to diseases that were unknown a quarter of a century ago. And we know that in attending banquets and keeping late hours, we are abusing our stomachs; and we are in pretty much the same condition as the carnation of to-day. (Laughter.) And in considering these matters we had better think how we can revive the constitution of the carnation somewhat as regards its treatment. I believe that it may be done. I know it is necessary to have flowers early in the Winter, but I say the carnation is a plant that needs rest at some time, and by its present culture it gets no rest. We propagate it towards Spring, then immediately put it out, and it has to grow rapidly all through the hot Summer, and we ask it to immediately bloom all through the Winter. It gets no rest at all; and so we find the life of any variety of carnation is very limited. Those with the best and the strongest constitutions last only five or six years. Then we find they are diseased, and have to discard them, and go back and get new blood, and start over again at this rapid pace. I have noticed that some carnation growers are already alive to this thing; they progagate their carnations early. This, unfortunately, is not the general procedure, but it should be adopted more. Propagate early in January, if you please, and then give the plants at least two months in a very low temperature, affording them a partial rest; get them sturdy and stout before they are put out in the field to grow, and it will benefit them. It will make their constitutions strong. We all know how we need rest. After leading a very fast life for a number of years I was obliged to take a rest last Summer. (Laughter.)

There are lessons in these things, I say, if we study our life that will have an influence on our ethics. It will teach us to take better care of ourselves and of our carnations.

Of the effect of an admiration and love of the beautiful in life upon mankind, there can be little doubt. I believe that at no time in the history of the world was the worship of the beautiful carried to such a state of perfection as among the ancient Greeks. I am speaking of the time, Mr. Toastmaster, when Greece was the mistress of the world, and when the athlete was master in Greece. I speak of the time when the religion of Greece was the worship of the beautiful; when men paid such attention to their physical condition as made them the most perfect of men. In those ancient games of the Grecians a man was compelled, by the rules, to go into strict training for ten months before he could enter into any great athletic contest, and he was therefore obliged to take care of himself. And should he resort to any trickery to gain the ascendancy in the contest, woe betide him! There was erected to him a monument of disgrace to perpetuate his dishonor, and deservedly so. And this worship of the beautiful among the Grecians, and this attention to their physical condition elevated them to a degree of perfection that has never been equalled.

What do our painters and artists strive for to-day? Only to approach the old masters; they never hope to excel them. I say to you there is a lesson whereby we may improve our ethics, if we consider what the Grecians did in the worship of the beautiful, and in their rational care of themselves. (Loud and continued applause.)

At this point Mr. Woodruff left the gathering, and President Ward acted as toastmaster.

The next speaker was L. E. Marquisee, of Syracuse, the "Marshall P. Wilder" of the craft, who responded to the toast, "The Humorous Side of the Florist's Life." Mr Marquisee was in his happiest vein with a fund of humorous anecdote, and kept his hearers convulsed with laughter during the half hour that he occupied the floor. There was very little humor, so far as he could see, in the florist's life, and probably more disappointments than were experienced in any other business. He quaintly referred to the fact of a pet carnation going back upon him, and his consequent loss of several thousand dollars. He closed his remarks with a beautiful peroration reciting some charming verses on the subject of flowers.

The next toast on the list was "The City Beautiful," and in the absence of President Healy, of the Brooklyn Institute, it was responded to by President Burton, of the Society of American Florists. Mr. Burton confessed ignorance of the extent of the beauty of the City of Brooklyn, adding that he had been much interested in the talk of the Park Commissioner on the subject of the planting of the parks of the city. He marvelled at the large exhibition of carnations, especially at a time when the flowers were in greatest demand, and characterized the American Carnation Society as one of the greatest institutions, floriculturally, that we have in our country, a condition brought about largely through the efforts of the gentleman who is its president. He then switched off into a criticism of the critics of the S. A. F. and its work. He said: The Society of American Florists is not at this time of the year as much in evidence as the American Carnation Society, but I can assure you, gentlemen, that the S. A. F. is still in existence. There has been some fault-finding as to the doings and actions of the Society; as one writer stated it: 'The masterful inactivity of the Society of American Florists, that was doing little to add to its membership, or to work for the interests of the florists of the country.' I want to tell you that at this time of the year, or at any time between the sessions of the national convention of the Society of American Florists, that society is represented by its officers. Some of these officers are elected, and some appointed. We have elected officers, and then we have an executive committee. So far as I know, the officers are all in accord; and as president of the society, I can say that the president of the Society of American Florists has no apology to make for anything that he has done, no regrets to offer; and he feels sure at the present time he has every executive officer with him. If there is any member of the board of officers that he has not with him, that does not feel as he does, he regrets it; and if anyone chooses to publicly assail the society rather than counsel with his brother officers, that is the misfortune of the society, and not the fault of its president. (Applause.)"

William Scott, of Buffalo, responded to the toast, "Queen Flora's Treasure House." He considered it an honor to speak at such an important gathering; one

PARTIAL VIEW OF THE AMERICAN CARNATION SOCIETY'S EXHIBITION AT BROOKLYN, N. Y., FERRUARY 19 AND 20, 1903 of the greatest he had ever attended since he had been a member of the S. A. F., or of the Carnation Society. He spoke lovingly of his profession, stating that he would not change it for any other business in the world; not for ten thousand a year. The florist's profession was like the "quality of mercy;" it was twice blessed; it blesseth him that gives and him that receives.

Arthur Herrington, president of the Chrysanthemum Society of America, replied to the toast, "Floriculture as a Profession." He was pleased to see the concession made that the florist's calling was now recognized as a profession. While in other businesses it was possible to complete an apprenticeship, yet a mastery of the art of the florist was never properly acquired. All were learners until they had pasesd away.

F. B. Lown, of Poughkeepsie, replied to the toast of "The Value of Horticultural Organization." He touched on the work accomplished by the Dutchess County Horticultural Society, of which he is a very active member.

F. H. Lemon, of Richmond, Ind., responded to the toast, "The Carnation's Conquest of the West." He referred to the great advance made in the culture of the Divine Flower in his locality, and paid high tribute to the "king of carnations," Fred Dorner. The carnation had taken a place supreme in the heart of the Western people. Where a few years ago but one man was engaged in its cultivation, there were now hundreds; and as many seedlings have been grown in the West as anywhere else on the Continent.

Mr. Ward then spoke of the good work of the entertainment committee of the Brooklyn Horticultural Society, of which A. H. Langjahr was chairman, assisted by Messrs. Dailledouze, Allen and Besold. To Mr. Langjahr's efforts a great deal of the success of the present entertainment was due. He called for three cheers for that gentleman, which were given with a will, Mr. Langjahr bowing his acknowledgments. Mr. Ward also paid tribute to the work of the secretary of the local society, Alexander Wallace, and a similar response was accorded that gentleman. In a few words Mr. Wallace testified to the encouragement given him by the other officers and especially the members of the soceity whose enthusiasm and desire to make the Brooklyn meeting a success in every particular was unbounded.

Mr. Scott read the final resolutions of the American Carnation Society, thanked the Brooklyn Institute and the Brooklyn Horticultural Society and the daily press of Brooklyn for the treatment accorded. President Ward then spoke a few words, in which he stated that he did not believe that the present meeting of the American Carnation Society, or of any other society or a banquet of this character, interfered with the Society of American Florists one jot; a statement that was vociferously applauded.

After a few remarks by a gentleman from Holland the happy affair came to a close with the singing of "Auld Lang Syne."

The banquet hall in the Germania Club, where the banquet was held, was very tastefully decorated under the supervision of J. V. Phillips, assisted by Messrs. Ruddy, Bennett, Zeller, Mellis, Molatsch and others. Among the donors of plants and flowers for this occasion were F. Manker, A. N. Pierson, Dailledouze Bros., C. E. Koch and C. W. Ward.

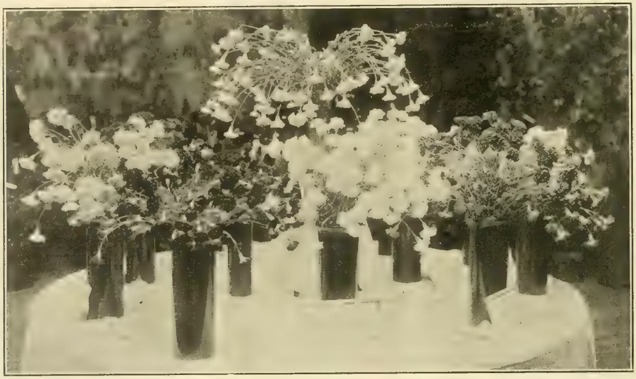

EXHIBIT OF J. D. THOMPSON CARNATION CO., JOLIET, ILL., AT BROOKLYN SHOW OF AMERICAN CARNATION SOCIETY.

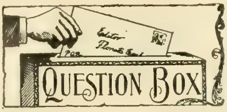

A Water Tempering Device.

(48) Please inform me of a simple water tempering device, the water to be used for carnations. How high ought the tank to be located to get force enough for spraying purposes? About what capacity of tank would be needed for 5,000 feet of glass? J. C.

—The answers to the foregoing questions depend on the method used for heating the houses, the means of pumping the water, and the general arrangement of the system. If convenient to the heating plant a simple method of heating the water is to run heating pipes from the boiler and connect with a coil inside the tank; or, in the case of hot water, to allow the water from the heating plant to circulate through the water tank. If the pipes are exposed so that there is danger of freezing, in case the fire gets low, a safety valve should be provided to prevent an explosion. If there is no danger of the freezing of the water in the tank, or the connecting pipes, it can be tempered for watering by connecting one of the returns in the heating plant with the pipe which leads to the water tank, and then by connecting the water pipe in the house with both the tank and one of the flow pipes in the heating system it will be possible by means of valves to so control the flow of the water that any temperature desired can be secured. If the bottom of the tank is elevated ten feet above the level of the beds it should answer for carnations; but for roses at least double this height would be desirable. The size of the tank will depend on the method of raising the water. Thus, if a windmill is used, a tank with a capacity of 120 to 150 barrels, depending upon the force of the wind, will be desirable; while if gasolene or hot-air engines are used for pumping one-half this size will answer. L. R. TAFT.

Heating.

(49) How many square feet of glass can be heated by a hot water pipe boiler, which contains six coils of 3-inch pipes, four pipes high, length 8 feet, making a total of about 200 running feet of 3-inch pipes? S. & S.

—A properly constructed boiler should take care of twelve to fifteen feet of radiating surface for each foot of heating surface, the amount varying according to the size of the boiler and the frequency of firing. This will make the boiler described able to handle 2,400 to 3,000 square feet of radiating surface, or from 7,500 to 10,000 square feet of glass, the amount varying according to the temperature desired.
L. R. TAFT.

A Coil Boiler.

(50) Kindly let me know how to build a coil boiler to heat three greenhouses, two 20x100 feet each and one 27x100 feet. Are coil boilers as economical of fuel as regularly constructed heating apparatus?
LEBANON GREENHOUSES.

—Nothing is said regarding the temperature desired or the amount of glass in the side walls. Under average conditions there would be about 9,000 square feet of glass, and to heat this to 60 degrees about 3,000 square feet of radiating surface will be needed. To supply this radiating surface there should be about 250 square feet of heating surface in the boiler. With a boiler eight feet long this can be secured with six coils, each of which contain five 3-inch pipes. The coils can be constructed with built-up headers of tees and close nipples, using a long thread and a lock nut at one end of each of the pipes. The upper ends of the front headers and the lower ends of the rear headers should be connected to 5-inch main headers, for flows and returns respectively. Set the boiler so that the front end will be six inches higher than the rear. Use a grate about 3x3½ feet, with a bridge at the back so that the flames must pass up between the pipes. Extra heavy pipes should be used, and the threads should be as little exposed as possible. These boilers are less durable than steam tubular boilers, or cast-iron boilers, either of which will, as a rule, give better results. Steam tubular boilers, with large flanges for connecting the flows and returns, answer well for hot water heating.
L. R. TAFT.

Manure for Rose Soil.

(51) What is the best manure to mix with soil to put on benches for roses? I saw a statement in one of the papers some weeks ago that sheep manure is the best manure for roses, without specifying anything about mixing with soil, top dressing or liquid application. If sheep manuure is as good as cow manure for mixing with soil to put on benches, what proportion of manure should be used? N. E. B.

—Well-rotted barnyard manure is the best for mixing with rose soil. Sheep manure is one of the best manures to use as a mulch, first mixing it half and half with soil, and then spreading it almost one inch deep on the surface of the soil. Sheep manure is also good applied in liquid form. Have it about the color of weak coffee and apply once a week.

Geraniums.

(52) I have a bench of geraniums, kept over from last year. The plants were in 2½, 3½, and 4-inch pots. I repotted them into 3½, 4, and 5-inch pots in November. I want them to be in bloom for Decoration Day week. Shall I pinch off the blossoms until April 15, or grow the plants dry for a month or so? SUBSCRIBER.

—We would not advise keeping the geraniums dry. The best thing to do will be to encourage growth right along, and pick off such flower stems as may show until the first week in April; then let the plants flower right along. This should bring them well into bloom by the middle of May, and a little shading, with cool temperature, will carry them over until they are wanted.

Spiraea Japonica.

(53) We had some spiræa japonica arrive December last. We soaked them, planted them in 6 and 7-inch pots, placing the pots under the greenhouse benches, where the temperature stood at 60 degrees. The clumps never started, and on examination we found that they had rotted. What was the cause? J. B.

—We cannot assign any cause as to why the spiræ decayed, except that they may have been kept too wet previous to their starting into growth, or else the clumps were not in good condition when they were received.

Palm Seeds.

(54) R. P.—See page 196 of The Florists' Exchange for February 21, regarding the germination of palm seeds.

Temperature for American Beauty Cuttings.

(55) N. E. B.—A suitable sand temperature for the rose cuttings is 65 degrees, with the air temperature at 60 degrees.

AMERICAN PARK AND OUTDOOR ART ASSOCIATION.—The preliminary programme of the seventh annual meeting to be held in Buffalo, N. Y., July 7, 8, and 9, 1903, has been issued. Canadian News

Toronto.

Club News.

The February meeting of the Gardeners' and Florists' Association was held last Tuesday, President W. Wood in the chair. The meeting was a very good one. There were 28 members present, and considerable business was done. Final arrangements were made for the carnation meeting on March 5, and a good many letters were read from intending exhibitors. There is no doubt the meeting will be a very interesting one, and while a large number of the trade is sure to take advantage of the opportunity, still several others would be money in their pocket if they decided to come to the meeting. Last year we had an exceptionally fine show, and there is no doubt the coming one will be better. Intending exhibitors should write to E. Collins, Allan Gardens, secretary, for instructions.

The C. H. A. executive committee will hold a session at John H. Dunlop's greenhouses on the morning of the 6th of March, and the G. & F. A. will hold its annual dinner at Webb's in the evening. All visiting delegates should make arrangements to stop over for that affair, as they may be sure of an enjoyable evening. Mr. Dunlop invites all the members, who are at all interested, to his greenhouses on the 6th, and I would advise all, who are able, to go, for there are many things interesting to the craft to be seen on this model place.

Mr. Dunlop stated he was going to the Carnation Society meeting at Brooklyn, and was given full authority to act for our association while there. Several new members were nominated.

At a meeting of the Industrial Exhibition Association two delegates from the C. H. A., J. H. Dunlop and H. Simmers, were elected members of the association. THOMAS MANTON.

Brampton, Ont.

The Dale Estate has decided to again enlarge its plant. Our readers will remember that last September we partially illustrated the work being done at this establishment in erecting 21 houses, each 225 feet long. This season the addition is to be a block of 21 houses, each 262½ feet long and 17 feet wide, and a small block of seven houses, each 150 feet long and 17 feet wide. The small block is to be adjacent to the new office building also to be erected this season. The greenhouses are to be of iron frame throughout, with automatic double ventilation each side of the ridge. The contracts for the construction ironwork, the ventilation, the boilers, stokers, economizers and coal conveying machinery have been secured by the King Construction Company, of Lockport, N. Y., and Toronto, Ont.

Hamilton.

The weather is now milder and altogether good growing weather. The recent cold snap caused a marked depression in the shipping trade.

Will some one in Toronto please tell us what has become of the "Canadian Florist," the first issue of which was printed in that city some time ago? The trade in this city has heard nothing more of it.

Florists' Club.

The next meeting is to be held on March 3, and another determined effort is to be made to get a full and representative attendance. If this club was supported by those who ought to be most deeply interested in it, much profit as well as pleasure might be reaped by its members. Let every one turn out to the next meeting. Do not let the prospect of a few cents worth of business or other trivial excuse keep you away. If this club lives up to its opportunities it will permanently benefit the whole trade. Everyone admits the prices are too low, yet very few seem willing to take any concerted action to improve matters. The existence of this club offers an opportunity which, as business men, we should not neglect. The question is surely worth discussing anyway.

BEAVER.

Canna Burbank
Large, dormant pieces, 2 to 3 eyes, $1.50 per 100; $10.00 per 1000.

Montreal.

News Notes.

The coal famine is now a thing of the past. The price is still abnormally high, but the supply is adequate. In the future there will be many changes in the coal trade; the high-handed proceedings of the five men that control the hard coal trade of Montreal and vicinity are considered intolerable.

The wholesale price of cut flowers is the subject of much comment. The retailers claim that whatever the reasons have been for the high prices, those reasons are now past, and a lower scale of prices should take effect without delay.

Bertie Graves will open a store on St. Catherine street, near Guy. There is also a rumor that one of our leading wholesale growers will occupy a new store at the corner of Guy and St. Catherine streets on May 1.

Miss Murray has decided to keep on the greenhouses at Westmount, instead of closing, or renting them, as was originally intended.

Tom Martin, of Martin & Sons, leaves shortly for Los Angeles, Cal.

The "progressive euchre" the club was to have held on Monday night did not materialize. The reason is not at all clear. Some prominent members who should have been in a position to know better were the victims of the postponement. It would seem to be policy on the part of the executive to notify members when an affair of the kind is called off. B.

The Market.

MONTREAL. Business the past week has been of a more satisfactory character than for some past weeks. There has been a noticeable increase in sales of both cut flowers and plants, the latter especially being in increased demand.

The weather continues of the most inclement nature; twice during the past week the thermometer registered 20 degrees below zero, with a strong wind blowing the whole of the time; some growers declare that this week has been the hardest of the whole Winter. B.

TORONTO.—Business is very good, and although roses have improved very much in quality, they are still scarce. The store windows are full of bright flowers, and roses appear to be picked up as soon as offered. Violets are still plentiful and good. L. J. Vair, of Barrie, is sending in the best I see around. Carnations are generally very good. Sinclair, our commission man, is getting in some very choice ones. Dunlop is showing a few very fine cattleyas and nicely flowered rhododendrons. All the downtown florists have been busy with funeral work. Bulbous stock is very plentiful, and most of it is very good. T. M.

Forcing Crocus King of the Whites.

Last Fall we procured from Holland several thousand bulbs of this new white crocus for Spring garden ornamentation. But the bulbs looked so fine, large and tempting that we decided to try them for forcing, using 25 flats for that purpose. The bulbs were placed one to two inches apart in the flats, watered and placed on shelves in a cool cellar with other bulbs. They have certainly proved highly satisfactory, being useful either for funeral work or in pans.

They were well established when brought into a cool house the first of February, and are now one mass of white tube-formed flowers, enhanced by their golden pistils.

In our childhood days the snowdrop and crocus were always sought after as harbingers of Spring. It is a native of Southern Europe.

News Notes.

The largest range of glass that will be added tributary to this market the coming Spring will be that of the Poehlman Bros. Co., they having recently placed orders with Geo. M. Garland for gutters and with J. C. Moninger Company for lumber for a range of ten houses, each 27x350 feet.

The George Wittbold Company will also add two houses to their present range at Edgebrook the coming Spring. They will use the Garland iron gutter and cast-iron posts. A. Dietsch & Co. will supply the necessary woodwork.

Peter Reinberg has bought a block of land east of his home on Robey street, comprising over four acres, on which he contemplates the erection of several greenhouses in the near future, possibly this Spring. The Liberty rose cuttings that this firm is sending out this season are giving high satisfaction.

The daily press has been giving the Douglas Park Conservatories great praise for the fine flowering plants on exhibition there, including some extra fine amaryllis. The houses are in charge of Charles Zapel.

The raising of the rents in the Atlas Block will no doubt cause many of the wholesalers to look for new quarters when their leases expire.

Kennicott Bros. Co. say there is one thing peculiar about the shipping orders they receive this season and that is, that four-fifths of the flowers ordered are carnations.

A trip through the Chicago Flower Growers' Company's market found nearly all stock sold out by the noon hour. The George Wittbold Company have space rented on the floor, and handle all kinds of bulbous stock, in addition to having samples of palms and ferns. The firm is doing business with people they were unable to reach before, and think it will be a paying investment.

Weiland & Risch will erect the coming Spring 50,000 feet of glass, in order to supply their increasing trade. The new range will be devoted exclusively to American Beauty roses.

C. W. McKellar is on a Southern trip in the interests of the firm of McKellar & Winterson, and will also take part in the Mardi Gras at New Orleans in company with Mrs. McKellar.

Archie Spencer is happy over the arrival of a bouncing baby boy at his home, February 19.

The many friends of Edgar Sanders will be pleased to learn that he is now able to walk all around the house, making his first trip downstairs last Sunday. There is no doubt but that he will be able to be out and around again as soon as warmer weather arrives.

John Zeck is rejoicing over the arrival of a ten-pound boy on February 11. Mother and son are doing well.

J. C. Vaughan is again at his duties after a severe siege of sickness.

ROBERT JOHNSTONE.

Boston.

A Carnation Show.

The annual exhibition of carnations, roses, and violets, under the auspices of the Boston Co-operative Flower Growers' Association, will be held Saturday, March 14, at the Flower Market. An exhibition of as high quality as seen in any recent years is now assured, and the association has offered some generous prizes. Certificates of merit will be awarded to all new carnation seedlings, or sports, not yet disseminated, which score not less than 85 points, according to the scale of the American Carnation Society. The following prizes are offered: First prize, $4.00; second prize, $2.00, for the best vase of carnations in the exhibition (50 blooms and foliage must be shown); also for vases of fifty blooms each of white, scarlet, light pink, dark pink, crimson, variegated yellow and mixed carnations, and for twenty-five roses, any color. For violets, prizes of $3.00 and $2.00 are offered for best and second best bunches of 100 violets in both single and double varieties. Intending exhibitors should apply to George Cartwright, secretary, Flower Market, Boston, for any information; and shipments should be received on Friday, March 13, or not later than 11 a. m. Saturday the 14th, and should be sent to the Flower Market, care of John Walsh, manager. The committee of arrangements includes William Nicholson, E. Sutermeister, L. W. Mann, and George Cartwright. Patrick Boyle, of Whitten's greenhouses, has taken a stall at the Flower Market, and began selling there Tuesday of last week.

W. E. Coburn, of Everett, is editing a local weekly paper styled the Everett Weekly Record, the first number of which was published February 12, and presents a good appearance.

The growers of carnations for the Boston market who exhibited at the Brooklyn show last week did very well in the matter of prizes. As usual, Peter Fisher captured the lion's share, getting the silver cup and the Lawson gold medal with a vase of Enchantress, which variety also won for him firsts in the classes for one hundred and for fifty light pink. He also won a first for a white variegated variety, with Mrs. M. A. Patten, and a second for white with Governor Wolcott. M. A. Patten was not far behind, getting the Fisher prize for best vase of Governor Wolcott and firsts for scarlet, dark pink, and white variegated, with J. H. Manley, Mrs. Thomas W. Lawson, and Gaiety respectively, and seconds for yellow variegated and light pink, with Dorothy Whitney and Fair Maid. Albert Roper's vase of 100 Fair Maid won second prize for light pink, and looked remarkably well on the second day, and S. J. Goddard's second prize vase of white with The Queen stood up very well indeed.

J. C. E. Dickerman won the Warburton prize for Cressbrook.

S. J. Reuter's Lillian Pond was certificated with the fine score of 90 points, than which there was only one better score.

J. D. Thompson, of Joliet, Ill., ran over for a few days after the Brooklyn show, and visited the leading carnationists.

Quite a small army of bulb salesmen from Belgium have been in town this week. F. J. NORTON.

Worcester, Mass.

Here and There.

It is rumored that H. F. Lange, one of the leading florists of Worcester County, is soon to take unto himself a new partner.

During the period of high price coal ($15 was the maximum here) attempts were made to heat greenhouses with kerosene oil. The most thorough trial was made by H. F. Littlefield. The Archer Heater was put in, but it was found more expensive than coal at $30 per ton. The heat was regular, insuring uniform temperature in the houses. As a labor-saver oil outdistanced coal, but the quantity consumed more than offset the saving.

C. D. Mackie, the last comer into the field, reports a rapidly increasing business. Mr. Mackie makes a specialty of house decorating.

W. E. Sargent, for a number of years in business for himself, has closed up his store and entered the new establishment of C. D. Thayer, on Main street.

F. S. Fisher & Son a short time ago opened up another store, with Mrs. Fisher in charge.

Leonard Cousins, of Potter & Cousins, West Boyleston, is planning to locate in the vicinity of Boston about June 1.

All the florists report a heavy trade in funeral work. CAROLUS.

Providence, R. I.

Jottings.

The crowd returned from the Carnation Society's meeting with words of praise, notwithstanding the poor weather.

Smilax is out of the local market entirely, and Boston is furnishing us a supply for the present.

T. F. Keller & Co. are reported as making arrangements to move to the store next to their present location, formerly occupied by a fruit dealer.

The death rate of Providence increased 6 per cent. over the average for the month of January, thereby occasioning a larger demand for design work.

Last week's issue should have referred to the fine outlook for F. Macrae's lilies.

Prosperity carnations have retailed as high as $3.00 per dozen this season, but generally $1.25 to $1.50 has been the selling price, with few takers.

C. S. MACNAIR.

St. Louis.

ews Jottings.

The club entertainment in the odd Fellows' building the evening of he 14th proved a great success in every articular. Although it was a very isagreeable night outside, there were bout seventy-five persons in attendnce. Those who took part in the enertainment were: Messrs. Carew Saners, Frank Fillmore, J. J. Beneke, rank Ellis, F. B. Call and Fred Amann. Miss Laura Sanders performed piano solo and Miss Jessie Sanders ecited and sang. Miss Helen Ellis endered a piano solo, as did Mr. Juenel's children. After this refreshments ere served. The regular monthly eeting of the club was held on the 3th, with thirty-nine members present. It was a carnation meeting, and ne of the most successful and most argely attended of the year. Followng were the exhibitors and exhibits: hicago Carnation Co., Joliet, Ill., represented by James Hartshorne, with arlowarden, Mrs. Higinbotham, Her ajesty, Marshall Field and Mrs. Potter Palmer. S. J. Reuter, of Westerly, I., sent Lillian Pond; Henry Eicholz, Waynesboro, Pa., Tiger. Dorner Sons Co., of Lafayette, Ind., howed Stella, Alba, Apollo and Dorohy Whitney. William Murphy, of Cininnati, Ohio, exhibited his beautiful hite, bearing his name. E. T. Grave, ichmond, Ind., had some good Presient McKinley. The St. Louis Carnaion Co. staged very fine Norway, hich captured second prize. J. F. mmann, of Edwardsville, took first rize with his White Cloud, and Morng Glory, and Guardian Angel. A. ablonsky, of Wellston, brought in ome extraordinary Peru, and a vase f mixed carnations. The third prize or the local growers went to the St. lair Floral Co. for a vase of mixed orts and their white seedling, No. 10. ohn Steidle, Central, Mo., entered a ixed vase, and F. J. Fillmore, Hoosier aid and The Marquis.

Of the outside exhibits Harlowarden as judged the finest crimson variety f the year; Mrs. Higinbotham a deided improvement on Daybreak; Her ajesty, Alba, Murphy's White and illian Pond, very fine, large whites; arshall Field an improvement on Mrs. eorge M. Bradt; Apollo an exceptionlly fine scarlet; Dorothy Whitney a ood yellow; The Tiger the best thing n the line of oddities.

The subject of express rates on cut ower shipments was discussed, and committee appointed to take up the atter and report at the next meeting. G. Berning is chairman.

The next meeting occurs March 12.

Visitors in town last week were: harles Meyer, New York; J. C. Hillerand, of Holland; Charles Loechner, epresenting Suzuki & Iida, of New ork; James Hartshorne, of Joliet, Ill.

James Gurney has severed his onnection with the Missouri Botanical arden.

The Strunk Shade Tree Company has een incorporated, capitalized at $25,000.

Wm. Hagemann, bulb importer, of ew York, and Mr. Parmalee, of Allan Co., pea and bean growers, were vistors Monday.

The North Floral Company has closed ts store at Ninth and Olive.

H. G. Berning is on the sick list.

The St. Louis Palm Company opened p an attractive store at 923 Olive treet last week. The concern sells repared palms and artificial flowers, s well as cut fresh flowers.

Bentzen Floral Company is getting ids for the erection of another house.

The Engelmann Botanical Club is aranging to supply the St. Louis school hildren with trees and shrubs, as they id flower seeds last season.

F. W. M.

Cincinnati.

ews of the Week.

We are experiencing now a little ild weather; and with the few days f sunshine stock is coming in better, both in quantity and quality. Violets, while not in over-supply, are sufficient to fill the demand. St. Valentine's Day aused a little flutter in the market for red flowers, which were, of course, hard to obtain.

I find, after visiting New York, that Cincinnati has just as good stock as the metropolis and I have returned home much better satisfied with my lot. The Carnation Society's exhibition was very good, indeed, but it would take an expert to say that it was a better exhibition than we had at Indianapolis last year. To my notion, in all the appointments Indianapolis has yet to be beaten. I am not throwing any cold water at our Brooklyn friends, for they treated us royally.

My visit to the greenhouses of C. W. Ward and the Dailledouze Bros. well paid me for my trouble, and one who is the least bit observant could not help learning something. White Bradt, as it is grown at the last-named place, is certainly an acquisition; but, as Eugene Dailledouze says, "If you can grow Mrs. Bradt you can grow White Bradt, but if you can't grow Bradt, let White Bradt alone, for it is identical with the parent." Some seedlings here were also worth noting, one white especially that measured four and one-half inches in diameter.

At Mr. Ward's I saw the best house of Mrs. Lawson, and all kinds of crimsons; but as crimsons are of little use in our market they did not interest me as much as some other sorts grown there.

The directors of the Carnation Society were wise in changing the date of next year's meeting to the first week in March, as we certainly will not have zero weather to contend with then.

E. G. GILLETT.

Indianapolis, Ind.

News Notes.

Bertermann Bros. came near having their large wagon destroyed by fire this week. The canvas lining was ignited by the oil stove, and it was but a few moments until the whole interior was ablaze. Luckily the fire department put a quick stop to the fire.

Herman Junge went to Adrian, Mich., on business Monday. Quite a lot of palms were ruined in transportation during the severe cold spell last week. It seems that a florist cannot afford to rent palms at less than $6.00 per dozen, when the thermometer registers below zero.

Anthony Wiegand is again able to be up and around after a severe attack of rheumatism.

A. Baur was the only florist from this city in attendance at the Carnation Society's meeting.

The flower market at Tomlinson Hall has been rather deserted on account of the severe weather, and business has been somewhat duller than usual.

Messrs. Huckriede & Son are cutting a fine crop of Harrisii lilies.

A local newspaper (The Indianapolis Sentinel) states that a new substance has been discovered in Washington, D. C., which will cause a plant to grow and bloom and fade within a few hours. Experts are now at work trying to apply it to floriculture in a practical way.

I. B.

Baltimore.

The News.

The annual election and supper take place at the next meeting. The delegates to the Carnation Society's convention were very much impressed with the gathering at the show at Brooklyn. The carnation, The Bride, at Mr. May's, was considered the finest thing in white carnations by the visitors. Dailledouze Bros.'s White Bradt also received much commendation.

Halliday Bros. and I. H. Moss are cutting fine stock of carnations at present. Mr. Moss is going in heavy on Lillian Pond for another year.

Coal is down to $4.40 per ton for soft coal in car-load lots.

E. A. SEIDEWITZ.

Toledo, O.

We have had more sunshine the last two weeks than in the past two months, consequently there has been a large supply of blooms. The demand for cut flowers has far exceeded the supply and our florists have not been dismayed at the high price of fuel, as their profits have been high on all sales.

E. H. Cushman, of the Cushman Gladiolus Company, was in town this week, and reports large sales of gladiolus bulbs.

Miss Belle Flick has been displaying some beautiful palms in her show windows on Madison street. C. J. S. P.

Cleveland.

Convention Echoes.

The returning members of the Carnation Society are endless in their praise for the hospitality shown, and of the show, as few of them had ever seen such flowers as were exhibited at Brooklyn. Two of Cleveland's seedling carnations went to the exhibition, but failed to bring back any blue ribbons or certificates.

A goodly number of growers from this city have exhibited at former carnation shows, and all seem to meet the same fate, as the grade of flowers they show is not up to the standard. Can it be that the weather conditions here are the cause of the trouble, or is it that we do not know how to grow carnations? Seedling carnations that have originated and have been grown here and have produced more and larger flowers than the standard varieties in their color and class are sent year after year to the shows, and the first certificate is yet to come home. One variety your correspondent knows of was exhibited this year; the flowers were all over three inches and the stems two feet in length, of a perfect color and competing with any other standard variety grown here. Under these conditions a grower loses interest in the shows, as it is a fact well known to him that his flowers are better than any home-grown ones under the same conditions. I think that the judges at these shows are passing too many good commercial sorts and giving all the honors to some of the large varieties that do not pay the average florist to grow, for the reason that they will not produce enough flowers at the average price.

Robert Upitz, well known among the florists of the city, lost his son Fred, aged 15 years, last week. An operation for appendicitis was the direct cause of his death. G. W. S.

Business Note.

"If you expect to conquer in the battle of to-day you will have to blow your trumpet in a firm, determined way. If you toot your whistle only, and lay aside your horn, there is not a living soul will know you were ever born. The man who advertises with a sort of sudden jerk is the man who blames the printer-man because it wouldn't work. The man who gets the business uses lots of printer's ink—not a clatter, not a spatter, but an Ad. that makes you think—and plans his advertisements as he plans his store and stock, and the future of his business is as solid as a rock."—Exchange.

Firms Who Are Building.

Plate 48

ULMUS CAMPESTRIS SUPERBA—The Belgium Elm

On the grounds of Messrs. Ellwanger & Barry, Rochester, N. Y. Planted in 1841 by Mr. George Ellwanger. Height, 70 feet; spread, 85 feet 7 inches. Its dimensions give an idea of the tree's extremely rapid and vigorous growth, although the figures and picture are inadequate to express its living amplitude, as well as the symmetry of its vast green tent in Summer, and the pomp of its great gilded October canopy.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 10 NEW YORK, MARCH 7, 1903 One Dollar Per Year

We are now booking orders for the

NEW SCARLET CARNATION FLAMINGO

For Delivery January, 1904

Those who saw it will endorse our statement that it is, without question, the most aluable New Variety shown at the Carnation Convention last week. All the leading xperts agreed on its great value. We want a good scarlet carnation, and this is a great dvance in this color. It is by far the largest scarlet carnation yet raised, borne on long, trong, stiff stems, and is a free and early bloomer. It will rank in quality with Mrs. Thos. V. Lawson, Enchantress, Prosperity, Etc. Was awarded the Lawson Silver Medal and he S. A. F. Silver Medal. Scored 90 points.

There is sure to be a tremendous demand for this, and if you want to secure early lelivery, order should be placed without delay. Orders will be filled strictly in rotation s received, so the earlier you book order, the earlier delivery we can make. Let us ave order at once while the matter is in mind.

We shall also have to offer for 1904 the following exceptionally valuable New Carnations

NELSON FISHER, MRS. M. A. PATTEN and ALBATROSS

Price of all the above, named varieties,

$12.00 per 100; $100.00 per 1000.

We offer also

NEW WHITE CANNA MONT BLANC

Delivery March, 1903

This is the most valuable new variety that has been offered in years. It is an exceedingly ree bloomer, producing large spikes of white flowers on strong branching spikes borne well above the foliage. Dwarf habit—identical with Mme. Crozy in height and style of growth. ts great masses of snowy blossoms contrast splendidly with the crimson, pink and yellow arieties, and it will be found indispensable in all fine Canna collections. A Novelty of terling Merit.

$0.75 each; $7.50 per dozen; $50.00 per 100.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

ST. PAUL.—E. M. Parmelee, of the John H. Allan Seed Co., was a recent caller.

The catalogue trade has so far reached about the same volume as last year; but as the biggest trade comes in March and April it is rather early to make comparisons.

European shipments are still arriving and will no doubt be acceptable at this late date. Early orders would indicate a heavy trade in seed corn, both field and sweet varieties being in excellent demand.

VERITAS.

HARRISBURG, PA.—The Holmes Seed Company a few weeks ago moved into its new quarters at 9 North Market Square.

The new store is a model of its kind and has been especially fitted up for the business. The sales room extends from Market square to Court avenue, a distance of 162 feet, or one block. It is 30 feet wide; the ceilings are high and it is lighted by the large show windows at either end and two large skylights placed in advantageous positions. The fixtures are of the most convenient design and artistic pattern. A fine suit of offices with a directors' room and a private office provide necessary facilities for the bookkeepers and other office help. The big sales room is filled with farm tools, seeds in large and small packages, and florists' and gardeners' supplies. A well lighted and well ventilated basement, plastered and cemented, fully as large as the sales

AND A FULL LINE OF HARDY ORNAMENTAL STOCK.

Union County Nurseries, **HIRAM T. JONES,** **ELIZABETH, N. J.**

Mention the Florists' Exchange when writing.

room, is used as a wholesale depot and is filled from end to end with stacks of bags containing seeds, bulbs, etc., and farm tools and supplies of all descriptions.

The catalogues are all mailed, even those of the provincials who wait until the city fellows make a copy for them to work by. The weather is seasonable, prospects are for an early Spring, and the seedsmen are busy and happy, with the exception, perhaps of those who sold their sweet corn at $3.00 per bushel and their cucumber seed at 35c. per pound.

For several years there has been a little nervous cry in the trade that there was not stock enough for the leading articles with which to fill orders. This year the cry continues, and certainly there is more cause for it than there has been hitherto. Wax beans of all kinds, but especially Wardwell's Kidney Wax and Grenell's Rust Proof, are very scarce, but there is one or another variety of beans sufficient for the planters. Even the contract growers realize this and are already reducing their prices.

Vine seeds, especially cucumbers, are scarcer than the earlier reports indicated. There certainly is not enough at any price to go around.

In regard to corn, the dealers seem to be reaching a more rational view of the conditions. To be sure, the crop is not an average one, and the quality in many cases is poor. The scare, however, was not caused by the seedsmen, but by the canners, who are in the habit of relying on growers instead of seedsmen for their supplies, not getting any deliveries and turning to the regular dealers to buy. New records in the way of prices have been made, but now these canners, who were so anxious a week or two ago, are beginning to kick themselves and feel ashamed of rushing the prices to the points they did, in their anxiety to make sure of a supply of seed for planting.

Most of the larger dealers find that the real difficulty in securing a supply of corn is more the result of the growers in the West being unable to obtain cars from the railroad companies for transporting the goods. But as corn is one of the last things wanted, there is no doubt but what it will all come forward in good time, and that prices will be somewhat easier later.

Seedsmen who did not get nervous about obtaining supplies and who did not show an unusual anxiety to sell at any price early in the season, will, we think, be a little better satisfied than usual at the end of this season. In other words, while there are no surpluses of a great many things, there are enough goods in sight that can be sold at a fair margin of profit.

There is a rumor going the rounds that a number of the leading seed houses who quoted on surplus stocks in response to a request from the Department of Agriculture, feel somewhat indignant at the treatment accorded. The one is asking the other who got the orders, and all seem to agree that the seedsmen were not considered, but that the business for another year's supply has gone to the contract growers. If this is the case, the seed trade has some cause for being dissatisfied after the fair promises made to its committee which visited Washington in January.

J. Henry Byvoet, senior member of e firm of Gebroeders Byvoet, of Over-en, Holland, died on February 15, ged 70 years.

PAINESVILLE, O. Will McCleary, Hartsgrove, has accepted a position ith the Storrs & Harrison Company.

HUNTSVILLE, ALA.—Deeds have en filed in the Probate Court convey-g the John T. Paul farm of 132 acres Mercury to the Alabama Nursery ompany, who will establish an exten-ve nursery.

Grafting Wax.

Those who have a little grafting to , and who may not desire to buy wax ady manufactured, would find that ade by the old style formula satisfac-ry. The ingredients are: One pound llow, two pounds beeswax and four unds resin, melted together and well ixed. When cold, it becomes quite rd, requiring re-melting before a sec-d use. It is applied with a small ush. Those who wish a ready-made eparation can easily obtain it in any gricultural store.

Roses for Old Trees.

Wistarias, Virginia creeper and many her vines are seen used for covering d trees; but very seldom roses. There many of the climbing sorts perfect- hardy which, when permitted to amber over the dead limbs of a tree, come objects of great beauty. Crim-n Rambler and the many kinds of brid Wichuraiana roses, the Gloire de ijon, setigera and like kinds, are love- objects when in bloom. Old trees, e-sores when unadorned, become vis-ns of beauty when tastefully planted ith an assortment of vines. Spring is e time to plant.

Dead Branches in Evergreens.

Junipers and other evergreens are lia- to lose a branch at times, spoiling e appearance of the tree. This should overcome by tying a live branch in place, something often easily done spreading out slightly the live ones ar it.

Those about to purchase a tree will metimes reject one exactly suiting em had it not a defective branch, hen by tying a live one in the breach erything would have been satisfac-ry. It is some little time before a d branch takes kindly to its new sition, but its objections are over-me in time, and the blemish will be the past.

Japanese Variegated Grape.

A vine of ready sale is the variegated panese grape, Vitis heterophylla riegata; and a real, hardy vine at at. I have mentioned this vine be-re, praising it for its many merits. is fast growing, and whether in the en ground or in a pot, attracts every e's attention. The variegation con-ts of green, white and pink, all these lors appearing in stems and foliage. ttle clusters of berries succeed, which e green, pink and blue in turn, and hen in their ripening stages are a autiful show. As a pot or a vase ant in Summer it has no equal in its ay. It is a vine that sells itself, its any merits appealing to all who e it.

Sandy Soil for Newly Set Trees.

But very few of those who lose trees transplanting them know that, in any cases, the loss results from not ving the roots closely incased in rth. Roots must be closely fitted ith soil, or the tree cannot live. To t the soil to cover nicely all the ots is not always an easy matter; e may try our best, yet from various uses it may not be possible to do it. metimes very large roots are close together; at other times it may be the subject is an evergreen, with a large mat of roots, which it is almost impossible to get the soil under, or about. It will be evident to every one what all planters know, that the finer the soil the better the chance of getting all roots covered. But something else has been discovered, and is being practiced to great advantage by a few, which is to use sand for filling in about the roots; and those who use it are delighted with the result. It is so fine that it quickly finds its way into every little crevice, covering all the roots splendidly, better than anything else could do. Besides doing this, as all gardeners know, new roots soon form in sand, and this alone calls for its use. Only enough is employed to cover the roots well, after which ordinary soil is filled in to complete the work. Try it, and be convinced of its utility!

When to Plant Magnolias.

The advent of February means the beginning of the planting season to many of our Southern readers, and to them it will be seasonable to say a word relating to the planting of trees which prefer to be set in Spring. In Northern experience the magnolia and tulip tree will not live planted in Autumn, while many other sorts very much prefer Spring setting. Even those of us living North should be on the alert now looking to the planting of these trees, settling on what we wish done, that the planting may be effected at the earliest day after the ground permits in Spring.

It is a great task to the average nurseryman to get his planting done in good season. Orders pile up all Winter, and with the appearance of the robin every mail brings the inquiry, "Where are my trees?" And to satisfy his customers his own planting is often neglected. This should not be. Put on more men, if you must. Get your own planting done early. It means many a dollar more to you by the time the season's growth is over. Get in first the trees and shrubs that bud out early, such as weeping willow, larch, Tartarian honeysuckle, Japanese snowball; and do not miss the magnolia and tulip trees.

Bushes for Shifting Sands.

Along our coasts, where sand drifts form and disappear, according to the prevailing winds, something to fix the permanency of the drifts, or to prevent their forming in certain places is often very much desired. To those familiar with our coasts it must be a common occurrence to note the presence of the shrub called wax myrtle, Myrica cerifera, and how common it is, almost close to the sea, and how it holds the sand! It indicates that this is one of the first shrubs to be thought of for the purpose. These shrubs can be found all along the Jersey coast, many of them eight to ten feet high, having mounds of sand about them six feet high, blown there in gales of wind. These mounds do not hurt the bushes. The rain that falls permeates to the roots of the bushes easily, carrying the oxygen of the air with it, which is all that the roots ask for. The burying of the branches does no harm.

All along the sea fronts on the coast are bushes thriving, suggesting what should be attempted by those who wish to plant.

In addition to the wax myrtle there is the beach plum, Prunus maritima, growing often side by side with the other. Then there is the groundsel shrub, Baccharis halimefolia, which delights in sandy places; pitch pine, Pinus rigida; black alder, Prinos verticillatus; swamp alder, Alnus serrulata; the holly and many of the huckleberries, and many other sea coast shrubs.

And the value of vines should not be overlooked. The Virginia creeper is often found rendering valuable service in covering and holding sand dunes, besides ornamenting them greatly by its lovely Fall foliage. Wild grapes, too, perform the duty of binding to great advantage. I have not seen the trumpet vine near the coast, but further inland it may be found running over sandy ground, beautifying and binding it. It is well worth the time of one contemplating such planting to take a day's run to the seashore, some wild place, where he can see what Nature plants in such situations.

Express Rates.

Editor Florists' Exchange:

If any one has an idea that he can soften the hearts of the express companies with regard to charging exorbitant rates, let him discard it. All our appeals will be of no avail. But that the companies can be brought to terms there is but very little doubt. My opinion on this subject you will find expressed in the following letter, which I wrote to the Wells-Fargo Company:

"To The Wells-Fargo Express Co.

"If everybody would do as I have done the last four weeks you would soon find out that it is not to your interest to charge exorbitant rates. No one can reach you by persuasion; you have a monopoly and you know it. The sweetest song of the nightingale could not bring any softening to your hearts. But competition and using freight, where formerly you were favored; these are the springs which will make you jump. Why not organize an express by automobile? This will surely come, if you continue your greedy exactions.

"My letter would be to no purpose unless I told you what I, in my modest way, have done.

"(1) All my marketing which formerly came by your express reaches me by Erie Railroad, Friday's fast freight train, and is delivered Saturday morning in excellent shape.

"(2) Instead of making daily shipments of cut flowers, I make them only every other day.

"(3) Empty boxes are shipped on Friday by Erie Railroad freight. I never will in future use your express unless necessity compels me, and my prayer is that it never will.

"Now let others appeal to your sense of justice. I am certain that your eyes are only open to your own greed, and all the petitions and resolutions of rose growers will prove of no avail

"OTTO ANDREAE.

"Central Valley, N. Y."

Messrs. Poole & Purllant, of Bellefontaine, O., have written to their local paper, questioning a statement that appeared in the New York Press to the effect that the express companies give better service for less money than does the Postoffice Department. They say: "The rate on a one-pound package of cut flowers by mail from Bellefontaine to Degraff is 16 cents, or to any part of the country for the same rate. The same package from this city to Degraff by the American Express Company is 38 cents, two and a half times as much, and if the said package should be handled by two express companies the rate is increased again 50 per cent., or to 57 cents."

The firm advocates government ownership, adding: "It is only government ownership that will make the price of coal two dollars and ninety cents per ton in place of five dollars per ton as it is now."

The State Florists' Association of Indiana has passed the following resolution, a copy of which has been forwarded to John N. May, chairman of the S. A. F.'s legislative committee:

WHEREAS, The increased express rates have been declared unjust, unreasonable and detrimental to the florists of the State of Indiana, as set forth in the numerous appeals to the express companies, it is

RESOLVED by the State Florists' Association of Indiana to appeal to you, the express company, for a rate which will permit the florists to express flowers without resorting to the United States mail, interurban and other carriers. Also a rate which would justify a wholesale florist in making two or three deliveries of flowers where only one is made at present. The large majority of express packages are small ones, which can be carried by the Government for 12c to 15c, to which a special delivery stamp can be affixed for 10c, which will insure the prompt delivery of the package. Matters which were often overlooked under former conditions, such as the freezing of a small quantity of flowers, failure to deliver a package promptly, or breakage of any kind, will now be promptly taken up with the companies as the florists feel that they have been imposed upon and discriminated against.

Respectfully submitted by the committee.

H. HELLER,
Chairman.

BRIEFS FOR BUSY FLORISTS.

CARNATIONS.—Beds that are showing signs of exhaustion will be very much benefited by an application of liquid manure once a week. The surface soil of the benches should be disturbed as little as possible from now on; and where certain pink varieties are fading in color from too much sunshine, some attention to shading will be necessary. Cuttings that were rooted early, and are now well established in their pots or flats, will be just as well off if kept in a cool house. There is no need to hold the plants in a growing temperature; they will make just as good stock in the field if kept cool and sturdy as will plants that are grown along for all they are worth between now and the time to put them outdoors.

ROSES. Where the benches have not had a good mulch of fertilizer, it is in order now to feed with liquid manure regularly. With the lengthening of the days, and brighter sunshine, ventilation becomes more necessary, and some little care is required in order to keep the temperatures normal without inviting an attack of mildew.

FLOWERING PLANTS. Easter is but five weeks distant now, and potted plants intended for that occasion will need to be governed accordingly. Hydrangeas should have their buds well in sight, or they will be too late. Lilac may yet be started, but will require lots of forcing to be brought in on time. Deutzias should be brought in during the coming week, as also should the pans of lily of the valley. Genistas need holding back rather than forcing; likewise many of the azaleas. Pot roses that seem forward and are beginning to show flower buds, will need to be kept rather cool to have them in the best possible condition.

American Rose Society.

At the annual general meeting of the American Rose Society, to be held at Philadelphia, Pa., on March 25, 1903, the following motions will be introduced, notice of same having been given on January 28 last by Mr. Frank L. Moore, Chatham, N. J.:

(a) To amend the constitution in Article IV., Sec. 2, so that it shall say: "An executive committee of twelve" instead of "six."

(b) To amend the by-laws in Article II., Sec. 2, so that it shall say: "Four to be elected each year," instead of "two."

LEONARD BARRON,
Secretary.

QUESTION BOX

Metal Gutters.

(56) There are in the market several kinds of metal gutters for greenhouses, some of which rest under the sash bar and some on it. In the use of metal gutters in long runs, are any evils found to arise from the expansion and contraction of the metal? J. P.

—We have not heard of there being any serious breakage in glass, or a loosening of the putty where metal gutters are used; but perhaps some one who has had experience with the metal gutters will give an opinion on this subject.

Sand.

(57) Under separate cover, we have mailed you small sample of sand taken from our propagating bench; also a few cuttings of carnations which appear to be rotting badly; yet upon examining same under a glass we find in the pith of the cuttings numerous water white worms, which cause the mischief. The sand is the same as that used last year, but was dried in the sun, then frozen hard last Fall. We fail to notice any difficulty in cuttings of other plants, such as mignonette, coleus, geraniums, etc. Can you inform us about this insect and what to do to eradicate it? We shall dip all cuttings now in the bench and put them back in the old sand after treating it with lime water. We shall then put a whitewash on the bench and new sand for new cuttings.

You must look close for worms; they are small. RICHARD THE FIRST.

—The trouble with the sand in question is that it is full of dirt, or decayed vegetable matter, and the cuttings rot away after being in the sand a short time. The little worms, or maggots, are a result of the cuttings decaying, and not the cause of it. Before new sand is put in the bench, have the sand washed thoroughly clean of all dirt, etc., and there will be no trouble with the worms.

Callas.

(58) We are growing callas and wish to know how to keep the bulbs from one year to another. We plant them in the solid bed (not pots); and last year all of our bulbs rotted. Can you inform us at what time to stop watering them and how to get them dry, so that they will not rot? Do you think it pays better to have them in pots?

PHILLIPS BROS.

—Where callas are grown in solid beds, and it is desired to keep over the tubers for another year, they must be thoroughly dried down and ripened during the Summer months. We would advise commencing in the latter part of May and drying them down gradually by affording water less often; and by the middle of June withholding water entirely, allowing them to remain perfectly dry for a period of two months. Then the tubers can be lifted carefully and replanted in fresh soil. By keeping the soil perfectly dry while the callas are dormant, there should be no rotting of the tubers. We do not think that growing them in pots is any better than growing them in the beds when they are only cultivated for cut flower purposes.

Affected Leaves.

(59) T. M. G.—The leaves of the soft wooded plants, sent for inspection, all show the effects of the plants being kept in too moist an atmosphere, and we think if the house be kept drier, and water applied to the pots only when necessary, the plants will soon outgrow the difficulty before they are put in the garden, even.

Leaves of Box Turning Yellow.

(60) L. H.—The parts of the box hedge that are losing their color are no doubt affected by some local trouble; and we would suggest that the section referred to be taken up, the soil dug deeply, and then the box relaid, trimming off all the long, straggly roots.

Specimen Azalea indica.

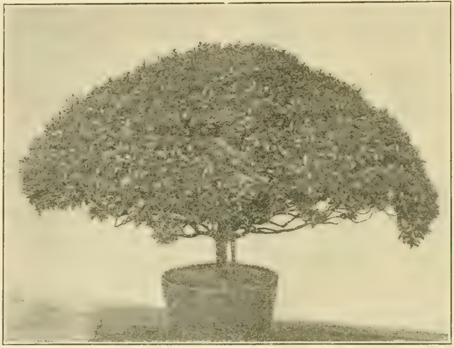
The illustration herewith represents one of a collection of eighteen of the largest plants of Azalea indica in cultivation. These very remarkable plants were once owned by a Belgian amateur, who for many years exhibited them successfully at the principal continental shows, where they always were the admiration of visitors, and a sight never to be forgotten.

The plants were acquired afterward by Sander & Sons, and have since found a home in America. They measure individually 8 to 10 feet across, and when in bloom present a gorgeous effect.

To maintain such a condition of health as the illustration shows requires great care and much time in tying, etc.

At the opening of the Boston Horticultural Hall I noticed some well-flowered pyramidal specimens from Professor Sargent's garden at Brookline, Mass. One rarely finds such plants now, and for some years they have been neglected by nurserymen. To secure such specimens takes many years of patient labor, and we now have some 10,000 plants in various stages, all growing in pyramidal form.

A. DIMMOCK.



SPECIMEN AZALEA INDICA.
Grown by F. Sander & Sons, St. Albans and Bruges.

Some Hardy Palms.

Editor Florists' Exchange:

In Joseph Meehan's interesting note, "Hardiness of Chamærops Excelsa," in your issue of February 21, he states that this palm lives outdoors along the south coast of England, where the plants endure 15 degrees of frost at times. According to Baron Ferd. von Mueller it will withstand a much lower temperature than 15 degrees; in his "Select Extra Tropical Plants" he says of it "The hardiest of all palms, has stood 3 degrees F. with only a slight litter (Count de Saporta)." In a London letter in "Garden and Forest" of March 20, 1889, Mr. W. Watson says it "does very well out-of-doors in the vicinity of London," while the same periodical of April 23, 1890, contains the following interesting note from Udo Dammer, of Berlin, Germany:

"On page 90 of this volume of "Garden and Forest" I stated that plants of Chamærops excelsa were to left out all Winter in order to test their hardiness, and the result has been that they have passed through in good health. Perhaps, therefore, these palms deserve the distinction of having survived a European Winter in the open air in a higher latitude than any others. It is true that the last Winter was mild, the lowest temperature being 8 degrees Fahrenheit and yet the fact is of the highest interest and invites further experiment. To make such experiments most valuable it would be necessary to test palms which have been grown from seed from the most northern limits, or from the highest elevation where the species is ever found."

Although the note states that the Winter was a mild one, yet it will be observed that the plants were subjected to seven degrees more of frost than they are called upon, according to Mr. Meehan, to endure on the south coast of England. From the evidence adduced it would seem more than probable that this Chinese fan-palm might prove hardy in Southern Virginia, especially if a sheltered location were to be chosen for it, and some form of protection afforded for the first Winter or two at least.

In this connection allow me to say that we have in this country a native palm which there is every reason to believe would prove perfectly hardy, not only in Southern Virginia, but also very much farther north; in fact, I would quite confidently predict that Mr. Meehan would find it sufficiently hardy for outdoor cultivation at Philadelphia. I refer to Sabal Adansoni, the dwarf palmetto, or blue palm, which is found growing from Florida up the Atlantic coast to far north and east of Wilmington, N. C. It is a stemless species, or, rather, its short stem is entirely under ground, and its leaves, which are circular in outline, are of a glaucous or bluish-green color, are borne on smooth-edged petioles, and vary in height from two to as much as six feet, according to age, character of soil, etc. A graceful flower spike rises above the leaves to a height of six or seven feet, a characteristic which serves to identify it from any other native species.

Von Mueller, in his work already quoted from, says of it: "According to Count de Saporta it resists a temperature as low as 17 degrees F. M. Naudin found it to endure the frosts in Southern France to 43 degrees 20 minutes north latitude. This palm does well in marshy places."

But I am in possession of evidence which proves that this palm will stand far greater cold than the above testimony indicates. In 1897 I had some correspondence with a party in Arkansas who informed me that this palm grew wild in considerable quantities in his locality. In response to my inquiry for further information he wrote: 'Our Winters here are quite cold for this latitude (34 degrees north) and in 1895 the thermometer was 8 degrees below zero twice, and did not affect the palms at all. Our average Winter here is from 15 above to zero sometimes for a few days, and never affects the palms growing wild. Don't know how far north they will prove hardy, but am satisfied they will grow in the open unprotected many degrees above this."

It is interesting to note that this palm flourishes in both wet and dry soils. From the car windows I have seen thousands of the plants growing in the swamps of Southeastern Georgia, where at certain seasons they are partially or wholly submerged in muddy water for days, perhaps weeks, at a stretch. I have also seen it growing naturally in the high hammock lands of Florida, and also transplanted to the high, dry, sandy pine land dwelling grounds of the State, where it seems to be equally at home. It is a really handsome fan-palm, and its iron constitution should make it valuable as a pot or tub plant under conditions which perhaps no other palm in cultivation would be able to survive.

Another very hardy and meritorious native palm is Rhapidophyllum hystrix, called blue palmetto in the botanies, but better and more appropriately known in its native habitat as the needle palm, or needle palmetto. According to Chapman it is a native of the low districts from Florida to South Carolina, and is accounted one of the most hardy of palms. In Europe it is better appreciated than in its own country and is priced extremely high in the catalogues over there. It is a stemless species, though having the appearance of possessing a trunk from one to sometimes as much as three feet high. This pseudo-trunk is formed from numerous slender, keenly-pointed, brown spines about fifteen inches long, interwoven with a mass of hairy fibres. These needle-like spines give the plant its common name and are a wise provision of nature to preserve the flower bud from harm; the latter, just before the bursting of the spathe, resembles a large snowy white egg nestling among the fibres, and but for the protection of the bristling needles would probably be devoured by animals. The leaves are beautiful, of a deep, shiny green above and silvery gray underneath, deeply slit into narrow ribbons, the points of which, spurred on one side, are slightly bifid, and the edges of the slender petioles are roughened with minute prickles. This species also flourishes when transplanted to high and dry locations, although in its natural state it is almost invariably found with its roots in constantly moist or even muddy ground.

It would hardly do to omit from these notes some mention of sabal palmetto, the cabbage palmetto or cabbage palm of the South, the most northern in range of really arborescent palms, and the plant of all others which most delights the eye of the visitor from the North. This palm is not found growing in its wild state north of Smith's Island, which is situated at the mouth of Cape Fear River, thirty miles below Wilmington, N. C. From here it ranges down the coast region to Southern Florida, and along the Gulf coast to the Apalachicola River. How much farther north than its natural range it could be induced to thrive is a question, but probably for a considerable distance, especially in the immediate vicinity of the coast. In Florida it exceptionally and with great age attains a height of eighty to ninety feet, and on Smith's Island it makes magnificent growth and forms columnar trunks thirty feet tall to their crowns of immense fan-shaped leaves. So vigorous a growth at the northern limit of its natural habitat would seem to indicate that it has not reached its northern limit of endurance.

OB SERVER.

Congressmen and Carnations.

In describing the closing scenes of the Fifty-seventh Congress, on March 4, the correspondent of the Times comments as follows:

"The red carnation brigade was out in full force. All the Republican leaders are fond of red carnations, but never before have they all worn them at once. It is a favorite joke in the House that the carnation is a mystic symbol indicating that the particular House leader who wears it is the man who is to act as the party leader on that day. 'Keep your eye on Grosvenor; he wears the carnation to-day;' or, 'Dalzell is the Republican boss to-day,' are stock sayings. To-day they all wore them. Mr. Cannon arose to the rare dignity of a frock coat, a sure sign that he was not going to make a speech, and put a carnation in his buttonhole. He stood in front of the Speaker's desk, which he is to occupy next December, and seemed reluctant to move away. He stayed there almost continuously until the Speaker gave up the chair to him, and he presided for nearly all the rest of the session."

News of the Week.

The Brooklyn Horticultural Society met in the rooms of the Germania Club on Wednesday evening with twenty-four members present. President C. W. Ward occupied the chair. John Dowsett was appointed secretary pro-tem., and read a communication from Alex. Wallace tendering his resignation as secretary of the society. Treasurer C. G. Weeber gave a detailed account of the financial standing of the society. After the reading of the treasurer's report an auditing committee was appointed to go over the accounts, and this committee announce that the report had been correct, showing that after all bills had been paid there was a balance on hand amounting to $208.68.

Wm. Plumb gave a detailed report of the exhibition, and J. V. Phillips reported for the decorating committee. It transpired through the reports of these two gentlemen that the thanks of the society were due to many who had helped to make the Carnation Society's convention a success, either by personal efforts or by donating material for decorative purposes. A committee of three was appointed to tender the society's appreciation of these gentlemen's labors who had so materially helped along the work of the society.

The following firms donated plants and flowers for decorating the banquet tables and dining hall: S. J. Reuter, carnations; A. N. Pierson, asparagus, smilax and Adiantum Farleyense; Chas. Krombach, primulas and cinerarias; Chas. E. Koch, palms and other decorative plants; C. W. Ward, carnations and primulas; Chas. Lenker, ericas and laurel; Frank Manker, primulas; Jas. Hartshorne, carnations; Dailledouze Bros., carnations; J. A. Suydam, carnations and mignonette; Schloss Bros., ribbons; H. A. Molatsch, carnations; W. C. Krick, letters. Those who rendered assistance in the work of decorating were: Messrs. A. Funke, C. Iffinger, John Weir, J. Zschorna, P. Wenk, M. Weimann and J. F. Ruddy.

On motion of Frank S. Hicks, the society was made a permanent organization, with meetings to be held three or four times a year. R. B. Gee was elected to the office of secretary. On motion by Chas. Krombach, the secretary was instructed to write a letter of condolence to John Wollmers, expressing to him the sympathy of the society on the death of his father, A. Wollmers.

The meeting then adjourned subject to the call of the president.

The New York Florists' Club will meet on Monday evening, March 9, in the rooms, 128 East 28th street.

The house committee announce that this is "Carnation Night," and growers are requested to send in exhibits, which will be well taken care of and properly staged. A good showing is anticipated.

The greenhouses in Prospect Park, Brooklyn, are particularly bright and gay with flowering plants just now. The cooler houses are radiant with azaleas, hyacinths, tulips and cinerarias. The latter are a very fine strain, and are well grown and flowered. The orchid house has a scattering of gloxinias in full bloom, set among the plants, that help to make the house look very attractive. The large palm house is in good shape. The tall palms that are planted have got well established, and are in a flourishing condition. Mr. Thompson, the head gardener, has been ill for a week or two, but has so far recovered as to be out again. It was owing to illness that he was unable to attend the recent banquet of the Brooklyn Horticultural Society.

John J. Foley, 226 and 226½ Bowery, has compiled a book on floral designs, and is offering it to the trade. The book, or album, contains twenty-four photographs of special designs made by Mr. Foley, and will be a great help to retailers when taking orders from customers.

The American Institute will give an exhibition of roses at 19 and 21 West 44th street on Wednesday and Thursday, March 11 and 12.

John Nash has been at home sick for a week, suffering from influenza.

J. McConnell is still confined to his home with an attack of bronchitis.

George Bradshaw is laid up with a severe sore throat and unable to leave the house.

The dense fog on Wednesday was the cause of all morning shipments of flowers being several hours late in reaching the city. There was, however, enough left-over stock to carry on the business.

There are some twenty new houses going up in the violet section during the coming Spring. The violet industry is evidently in a thriving condition.

John Dowsett has taken a position with C. W. Ward at the Cottage Gardens, Queens, L. I., in the nursery department.

C. W. Ward left Thursday afternoon for a business trip to West Virginia.

J. K. Allen was captain of the team in a recent bowling tournament that carried off the prize. His individual score was a big one, but he is too modest to have it go on record.

A car-load each of grass seed and fertilizers was taken in at Vaughan's Seed Store this week.

Wm. Elliott & Sons will commence their auction sales for the season on Tuesday, March 10, with a sale of hardy roses, rhododendrons, Azalea mollis, conifers, roots and bulbs.

Visitors in town:—P. G. Topper, representing A. Topper & Sons, bulb growers, Hillegom, Holland, is here on his annual visit. Chas. R. Fisk, Worcester, Mass., was in town this week.

SAGINAW, MICH.—The William Roethke Floral Company has been incorporated. Capital stock $25,000, fully paid in; real estate, $7,300, personal estate $17,700; credits, $500, actual value, $350. Stockholders are: William Roethke, Mrs. Bertha Roethke, C. L. Roethke, O. F. Roethke, Mrs. Elise Grause. Officers are: William Roethke, president; Mrs. Bertha Roethke, vice-president; C. L. Roethke, secretary and treasurer.

WAKEMAN, O.—Herman Martin, Jr., will engage in the florist business here.

PLEASED WITH RESULTS.

I am more than pleased with the results obtained from advertising in your paper. The Marie Louise violet stock as advertised by me is completely exhausted; I could have disposed of very much more had I been able to supply the demand.

N. Y. A. W. WILLIAMS.

MARCH 28th

Every Spring We Spring The Spring Edition

THIS SPRING

MARCH 28th

Review of the Market

NEW YORK.—The first week in Lent has proven a very disastrous one to the sale of cut flowers, and we find every kind of stock deteriorating in value. It is a good thing that roses are not in what we might call very heavy supply; if they were, there is no telling how cheap they might become. There are, however, more than plenty of them to satisfy the demand, and every day sees job lots of kept-over flowers sold at the buyers' own figures, in order to clean out and make room for incoming stock.

Bulbous flowers are at the lowest figure they have descended to for some time; 50c. per hundred is asked for some kinds of narcissus and fine Golden Spur are not averaging $2.00 per hundred. All other varieties of narcissus can be had at the first-mentioned price. Tulips are going at the same figures, and lily of the valley is bringing only $1.00 and $1.50 per hundred. Violets are down to rock bottom, though the peddlers do manage to use up the supply. That means, of course, that they have to get the flowers at their own figures. For good violets they are paying $2.50 per $1,000, poor stock going at $1.00 and $1.50 per 1,000.

Orchids are selling very unsatisfactorily, though there is a nice regular supply on hand just now, including cattleyas and dendrobiums.

The prices of carnations have taken the most serious tumble recorded this year. Fancies are scarcely bringing ordinary figures. Novelties are to be had at any price almost, and there are more coming in every day than can be disposed of; consequently sacrifices have to be made when a clearance is necessary.

Quite a mass of Spring flowers is reaching the market every day. Forget-me-not is one commodity that will hardly sell at any price. Snapdragon, when with good stems, sells fairly well; and lilac is hard to dispose of at any price. Sweet peas are more plentiful, also freesias. Neither of them is averaging as well as it has done previously.

Lilies have not changed in value materially, and the usual shortage in supply is predicted for Easter. Whether or not this shortage will materialize can be told later.

BOSTON.—All last week, since Ash Wednesday, business went from bad to worse, until on Saturday the market took a fearful slump, recovering slightly on Monday of this week; but at present writing (Wednesday) it is again in very poor condition, worse even than on Saturday. This condition is due to the decided increase in the quantity of flowers sent in, owing to the mild, sunny weather, as well as to the lack of demand, which seems to have fallen flat since the advent of the Lenten season. All kinds of flowers in season are now in overstock, and, except for the better grades and fancies, which clean up fairly well at slightly reduced values, it is extremely difficult to unload them at anything like satisfactory figures.

Prices on American Beauty have weakened this week, but even then the flowers do not clean up. Specials are offered at $4.00 to $6.00 per dozen, with other grades at from $3.00 down to 50c. In Bride and Bridesmaid the better grades move pretty well at $12.50 per 100, with a limited number of fancies realizing $16.00. No. 1 at $8.00 and $10.00 per 100, also do pretty well, but the smaller ones are very druggy and many find no outlet, or one at extremely low figures. Liberty roses, however, hold up pretty well, and Bon Silene, of which the supply is limited, clean up on sight at $4.00 and $5.00 per 100. Meteor have weakened, and specials are freely offered at $12.50, with No. 1 at $8.00 and smaller ones at from $2.00 to $6.00.

In carnations is the overstock very apparent, especially those of ordinary and inferior grades, which are sacrificed at prices running as low as 75c. per 100, and from that to $2.00. The better grades of ordinary sorts are freely offered at $2.50 per 100, with fancies at $3.00 and $4.00.

Bulbous stock is very druggy, and values are such that much stock is sold at the cost of the bulbs or less. Von Sion and Trumpet narcissus make $1.00 to $1.50 per hundred, though in rare cases $2.00 have been obtained for exceptionally good stock. Golden Spur is freely offered at $2.50 to $3.00, and others of the choicer sorts are correspondingly cheap. N. poeticus is in good supply at $1.00 to $1.50 per 100. Tulips range from $1.50 to $2.50 per hundred for singles, the latter price being for the best stock, while double make $3.00 to $4.00 and sell pretty well. Dutch hyacinths are coming along fast, and move only fairly well at $3.00 per 100, with best grade reaching $4.00. Lily of the valley is druggy, at usual prices; and lilies, which are now more numerous, sell with more difficulty at $8.00 and $10.00 per 100.

The violet situation is very discouraging, and prices have reached a level unprecedented at this season, the flowers being offered as low as 10c. per 100; and very good stock has to be sold at 25c. per 100, and at that figure the supply is not exhausted; 50c. per 100 is realized for a few which are extra good, and in most cases contain more than the hundred blooms. Pansies sell well at 75c. per 100, and sweet peas at $1.00 per 100 do pretty well.

The supply of bulbs in pans is now heavy; and azaleas and genistas are plentiful. But the plant trade, as well as the cut flower business, is quiet. F. J. N.

CHICAGO.—Since last report there has been quite a change in the market, or as one commission man put it, a "jump from Christmas to the Fourth of July" in twenty-four hours. There has been a decided drop in prices of stock of all kinds. The change came with the opening of the Lenten season, but was not due so much to that as to the bright weather we have had for the past week or more, which has created a large augmentation of supplies. Carnations are steadily on the increase and are hard to clean up at any price, especially the colored ones; white are still in good demand. Prosperity and Harowarden range in price from $5.00 to $8.00 per 100.

Bulbous stock is arriving in larger quantities, and, as a consequence, prices have fallen.

Smilax is the only thing on this market that has not decreased in price during the past week. R. J.

INDIANAPOLIS, IND.—Not a large amount of business has been transacted during the past week. Stock has been piling up until there is almost a glut, particularly of bulbous flowers. Roses are of good quality, but the demand has not been brisk. Bridesmaid and Bride sell, retail, at $1.50 to $3.00 per dozen; Liberty, $3.00 to $4.00; American Beauty, $2.00 to $9.00 per dozen. There has been a drop in the wholesale price of roses; good Bridesmaid and Bride bring 8c. and Liberty 15c to 18c. There are at last enough carnations to suit everybody; 2c. to 3c. is asked for them; average grades sell at 75c. per dozen, retail. A few fancies, such as Mrs. Lawson, President McKinley and Prosperity bring $1.00 per dozen. Bulbous stock is so plentiful that it is almost impossible to obtain good prices for it. Good tulips and daffodils sell as low as 60c. per dozen. Lily of the valley and narcissus bring 75c., and freesia 40c. per dozen. Single violets are to be had by the thousands; 50c. per 100 is a high price for them. Double violets sell at 50c. per bunch of 25.

A collection of blooming plants which would almost rival that of Easter can be seen in the forcing houses. There is not much demand for them, but they aid greatly in store and window decoration. I. B.

CLEVELAND.—Lent is with us again and the first few days has had a tendency to quieten the market to a marked extent. With the bright sunshine of the past few days, the supply of stock has greatly increased, and prices are lowering, although to no great degree. Bulbous stock is coming in quite freely, and selling better this year than ever before, but with the increased cut of other flowers it shall soon begin to drag and look for buyers. This city suffered a fern panic the latter part of last week; most stores were entirely out of this stock for a few days.

Prices for the week are reported as follows: Roses, teas selects, $10.00 to $12.00; No. 1, $6.00 to $8.00; No. 2, $3.00 to $5.00. Carnations, fancy, $4.00 to $5.00; No. 1, $3.00 to $4.00; No. 2, $1.50. Violets, 50c. to $1.00 per 100; tulips, daffodils, Roman hyacinths and Paper White narcissus, $3.00 to $4.00; Dutch hyacinths and lily of the valley, $4.00 to $6.00; callas $12.50 and L. Harrisii, $15.00 to $18.00; smilax, $15.00; asparagus, $35.00 to $50.00; adiantum, $1.00 per 100. Common ferns, $1.50 per 1,000, in short supply.

In plants, azaleas are selling well, with bulbous stock in pots and pans as a close second. G. W. S.

PITTSBURG.—The Lenten season has checked trade considerably. Stock is very plentiful. Prices are naturally lower and the street men are in their glory, carrying a big stock and selling at any old price. Some good roses are coming in now and the weather has a beneficial effect on carnations, as the month of March so far has given us the first real sunshine since last Fall. Yellow narcissus are more plentiful and way down in price. Dutch hyacinths and tulips go fairly well. Violets are cheap. Sweet peas not plentiful; a little too high in price yet. Lily of the valley sell poorly.

Plant sales are beginning to help along now, potted hyacinths are in later than usual. Ferns and fern dishes are in good demand. E. C. R.

DETROIT, MICH.—The Lenten season does not create any diminution in the number of calls for flowers. American Beauty and other roses are coming in more freely. Carnations are improving in quality and numbers. White stock is scarce owing to large demand for funeral flowers. Bulbous material is plentiful. Callas and Harrisii lilies are selling well at good prices. No great call for violets is experienced at present. Smilax is a little scarce. Wild smilax and fancy ferns are in demand. DILGER.

ST. PAUL, MINN.—Trade has shown a very decided increase which the arrival of Lent has not dissipated. In fact, if it were not for the calendar the florists would not know that Lent had arrived. Funeral flowers have been in great demand, and we are pleased to note the ever-increasing use of colored flowers for such occasions. One of the nicest, most appropriate tokens we have seen in a long time was sent to the home on the death of a prominent citizen. It was a fancy plant basket, filled with Norma hyacinths in full bloom, appropriately trimmed with greens and ribbon. Bunches of American Beauty, Bridesmaid and Liberty roses were among the other remembrances.

Roses have greatly improved in quality as well as numbers.

The store windows are bright with azaleas, primroses and bulbous stock, and everything seems to sell well. Some of the store men are using fancy baskets of plants such as tulips, hyacinths, daffodils, lily of the valley, etc., which seem to sell very readily.

Carnations and violets are in better shape and move well. Violets are short of the demand.

A week ago we experienced the coldest weather of the Winter. The only real damage we have heard of was at Carl Petersen's. Some of his carnations were nipped, owing to a poor boiler.

Soft coal is quite plentiful and prices have dropped $1.00 per ton on nearly all grades.

Recent callers were John Nilsen, of St. Cloud; Frank Berry, of Stillwater. VERITAS.

LOUISVILLE, KY.—The usual Lenten quietness is felt here, and were it not for the fact that funeral work has been unusually plentiful, we might complain about the state of business. We have been enjoying some good, bright weather and consequently flowers are more abundant. Violets, of which we have had very few all Winter, are in greater supply. Bulbous stock of all kinds is also plentiful, and in connection with azaleas and spiræas are much used for window decoration. Retail prices are: Roses, $1.50 to $2.00; American Beauty, $3.00 to $6.00; carnations, 50c. to $1.00 per dozen; violets, 50c. to $1.00 per 100; Dutch hyacinths, $1.00 to $2.00; Roman hyacinths and Paper White narcissus, 50c.; jonquils, 50c. to 75c.; Harrisii lilies, $3.00 to $4.00; and callas, $2.00 to $3.00 per dozen. A. R. B.

HARTFORD, CONN.—Business the past week has been rushing. It was generally supposed that when Lent started in the demand for flowers would decrease, but such is not the case, and roses are not over-plentiful, but are of fine quality. Bride, Bridesmaid and Golden Gate are the best selling varieties at present, and bring from $1.00 to $2.00 a dozen. Carnations are, perhaps, a little more abundant than heretofore, but the supply is still short of the demand. Daffodils and tulips are selling well; in fact, all kinds of bulbous stock meet with ready sale. Some very fine violets are in the market and are much called for. There is also a good demand for azaleas in pots at from $1.50 to $3.00 each. Hyacinths and tulips in pots and pans, cinerarias, cyclamens, primroses and lilacs in pots are also selling well. J. F. C.

KALAMAZOO, MICH.—Business has slackened up somewhat the last week or two, but as crops are still very light no bad effects are likely to be felt. Prospects are at present most satisfactory for a good Easter business, crops promising a nice cut by that time. Lilies with all our growers are doing well this year, and there will be plenty of time to get them in. S. B.

The Largest, the Brightest, the Freest Scarlet
CARNATION
CHALLENGER

PAMPHLETS RECEIVED.

MASSACHUSETTS HORTICULTURAL SOCIETY, Part I, Transactions for the Year 1902; also List of Accessions to the Library.

Burpee's (Philadelphia) Prize Supplement.

Society of American Florists and Ornamental Horticulturists.

Express Rates and Other Matters.

At the meeting of the executive board in Milwaukee, Wis., March 17, one of the most important matters to receive attention is the discriminating express tariff on flowers which has been in force since December 10, 1902. It is essential that the fullest details of protests or other action on the part of individuals, clubs, or societies should be in the secretary's office in season for compilation and arrangement in convenient form for the consideration of the Board. A number of reports from State vice-presidents and local secretaries are already on file, but many more are needed if the movement on the part of the national society is to carry weight as representing comprehensively the sentiments of the floricultural profession. Action taken in several places has come to my knowledge only through reports in trade papers. Official notification of all such should be transmitted to this office over the signatures of the proper officers or other active participants, and I would respectfully urge that this be done at once so that, if stringent measures are eventually forced upon us, the needed material may be at hand. The case as presented by the Boston meeting has already been before the traffic managers in New York City for three weeks.

All members having views on questions affecting the Society's future policy and welfare which they would like to submit to the Executive Board are earnestly requested to put same in writing and forward them at once to the secretary.

The following-named elected or appointed State vice-presidents for the year 1903 have severally accepted the office and pledged their best efforts for the advancement of the Society's interest:

Alabama—Wm. F. Lindsay, Birmingham; California—H. H. Lilienthal, San Francisco; Colorado—J. A. Valentine, Denver; Connecticut—Theodore Wirth, Hartford; Florida—W. J. Ellsworth, Jessamine; Georgia—L. A. Berckmans, Augusta; Illinois (South)—John Willius, Danville; Illinois (North), J. B. Deamud, Chicago; Indiana, W. W. Coles, Kokomo; Iowa—W. Greene, Des Moines; Kansas—A. H. Whitcomb, Lawrence; Kentucky—A. R. Baumer, Louisville; Louisiana—Harry A. Papworth, New Orleans; Maine—H. R. Mitchell, Waterville; Maryland—C. L. Seybold, Baltimore; Massachusetts (East)—H. P. Kelsey, Boston; Massachusetts (West)—A. J. Loveless, Lenox; Michigan—Robert Flowerday, Detroit; Minnesota—O. A. Wilt, Minneapolis; Missouri—C. A. Juengel, St. Louis; Nebraska—Lewis Henderson, Omaha; New Hampshire—B. Morris, Portsmouth; New Jersey—W. B. DuRie, Rahway; New York (East)—Benj. Hammond, Fishkill-on-Hudson; No. Carolina—Jas. M. Lamb, Fayetteville; Ohio (North)—Isaac Kennedy, Cleveland; Ohio (South)—Wm. Murphy, Cincinnati; Pennsylvania (East)—I. K. Giles, Reading; Rhode Island—L. J. Reuter Westerly; So. Carolina—Martin Stork, Columbia; Virginia—Lloyd G. Blick, Norfolk; Wisconsin—F. H. Holton, Milwaukee; Canada—H. H. Groff, Simcoe.

Report on Test of American Grown Bulbs.

In response to the request made through the columns of the trade papers last season, home-grown bulbs were sent to the convention at Asheville, N. C., for exhibition and testing as to forcing qualities, by Misses Wilson, Sorrento, Fla., and Poat Bros., Ettrick, Va. These bulbs, consisting of narcissi in several varieties, were placed in the hands of W. H. Siebrecht, Astoria, N. Y., and received from him the ordinary treatment given to bulbs of this class as forced for the production of cut flowers. Mr. Siebrecht's report thereon is as follows: "The Paper Whites were as good as the French. The Golden Spur not quite as large as the Dutch-grown, but all flowered A 1. The Trumpet Major were as good as any grown. Incomparable all flowered. The Poeticus ornatus were a little weak. Emperor and Empress O. K. Sir Watkin gave plenty of bloom. Campernelles were very floriferous. These were all the varieties supplied, and they proved, for the size of the bulbs, more than satisfactory, those from each of the exhibitors being equally good."

An opportunity will again be given the American growers of forcing bulbs and dealers in these products to demonstrate the qualities of their goods at the convention in Milwaukee, Wis., next August, and the gratifying outcome of the small display made at Asheville, as above recorded, should result in an increased number of entries this year.

WM. J. STEWART,
Secretary.

Peony Registration.

We have received, evidently for publication, from the "Secretary, S. A. F. Peony Association," a list of peonies (not new) of Japanese origin, said to have been registered by a New York importing firm with this so-called association, which registration, it is stated, "is to prevent as far as possible the duplication of names in this country. Heretofore nearly every establishment that bought this Japanese set gave same a set of names of its own. It will readily be seen that this system would create endless confusion, and to bring order out of chaos the Japanese names, in brackets, are appended to the new ones which have been appended (sic)."

We regret that we cannot, under the circumstances, assist in the very laudable desire to bring light out of this Oriental gloom; because, to the best of our knowledge and belief, there is no "S. A. F. Peony Association" in existence; and we cannot recognize any actions of an institution masquerading illegitimately under that title, in the matter of registration, or otherwise.

Besides, the list furnished is of little value. Here is a sample of the information supplied: "Achievement (Yayo-no-ho-mare) (then follows description) The Japanese name means 'Renowned, wonderful skill'."

If "nearly every establishment that bought this Japanese set gave same a set of names of its own," it would be of far greater service to purchasers of peonies to have the different designations given by these establishments to the set, rather than the Japanese appellations and their English equivalents, which, admittedly, have been discarded over here. We are not so much concerned, for instance, to know that the Japanese name of Bacchus is Kochomai, and that that in English means "Dancing Butterfly," as we are to be informed under what other American cognomens Bacchus is tripping the light fantastic toe in the United States.

BOOKS RECEIVED.

HOME FLORICULTURE, a practical guide to the treatment of flowering and ornamental plants in the house and garden, by Eben E. Rexford. Illustrated, 5 x 7 inches, 300 pages, cloth. Orange Judd Company, New York; price, postpaid, $1.00.

This book is written by one of the most experienced amateur floriculturists and most pleasing writers in this country. His intimate knowledge of the wants of the people has convinced him what is wanted in this direction is not scientific text books, but plain, practical, easily understood information which will enable those who love flowers to grow them successfully. The book has been written from the author's lifelong personal experience among flowers, and not from theory. Every detail in the principles and practice of plant growth and management is concisely, clearly and minutely explained.

The book treats on the soil for plants in pots, potting, watering plants, insects and how to fight them, care of house plants during Summer, fertilizers, diseases of plants, Winter precautions, dormant plants, appliances for the amateur's use, small greenhouses. Very complete lists and descriptions of plants best adapted to window culture are given, also of the best outdoor annuals, hardy perennials, shrubs, and plants for various purposes. The closing chapter, entitled "After Thoughts," forms a unique and pleasing combination of floricultural odds and ends, without which the book would have been deprived of one of its most instructive and attractive features. Over seventy illustrations add considerably to the artistic appearance of the book.

Banquets and Backbone.

That was a somewhat unusual, if not a humorous turn that the speech of the president of the S. A. F. took at the banquet tendered the American Carnation Society on Friday evening, February 20, in Brooklyn, N. Y. The gentleman in question was asked to reply to the toast, "The City Beautiful," and, after a few commonplace comments, he immediately launched forth into a justification of his actions as president of the S. A. F., vouchsafing the assertion that "the president of the Society of American Florists has no apology to make for anything he has done, no regrets to offer, * * *"

So far as we know, or have read, no action of the president has at any time been called in question, criticized, or in any manner referred to adversely, and, with all due respect, his quoted remarks, in addition to being entirely out of place, were gratuitous, ill-advised, unnecessary, and uncalled for. Time enough to defend one's self when he is arraigned on any specific charge.

As the outcome of Mr. Burton's comments we have the following statement in a Chicago contemporary: "In closing he made a pointed reference to certain recently-published malevolent criticisms of the official acts of the Society of American Florists which he believed would be resented by all true friends of the national organization."

These are not Mr. Burton's words; consequently, they must voice the feelings of the man who wrote them. But he, too, is laboring under a delusion. There have been no "recently-published malevolent criticisms of the official acts of the Society of American Florists" that have come under our observation. We confess to having read criticisms on the inactivity of the society, which means no action at all. But that was merely individual opinion and uttered for what it was worth. On the other hand, had the writer of the sentence above quoted omitted the vituperative adjective, "malevolent," and changed around the words of his report to read, "criticisms of acts of officials of the S. A. F.," he would have been somewhat nearer the truth.

Let the blame for the action that has given rise to criticism—so far as we are concerned—be placed where it belongs; which is neither on the S. A. F. nor its president; but on the peony "committee of nine" appointed by him, the names of the members constituting which, by the way, are mysteriously being kept secret, for what good reason we know not.

In its decision to assist the peony interests of the country the S. A. F. meant well, and its "official act" in connection therewith is to be commended. Doubtless, too, President Burton selected the committee with the best of intentions, having faith that the gentlemen forming that committee would carry out its work in accordance with the powers conferred upon it by the society's vote. If that committee, or any part of it, has exceeded its authority, which it unquestionably has done, all vituperation, condonation and cavil to the contrary notwithstanding, and acted in a high-handed and presumptuous manner, thereby imperilling the stability of the S. A. F., that is the "misfortune of the society and not the fault of its president."

But let no man be carried away with the idea that any officer, or any committee, is the S. A. F. itself, or that the society is responsible for their actions until these actions have been approved and endorsed by the society. They are very unwise who think so, and the S. A. F. members will no doubt disabuse the minds of those who hold this belief when the convention time for 1903 rolls around—or we are much mistaken.

Obituary

Mrs. George A. Rackham.

Aggie C. Rackham, the beloved wife of President Rackham of the American Carnation Society, died at her home in Detroit, Mich., on Monday, March 2, of pneumonia. Her husband and four children the youngest of whom is seven years of age, mourn her loss. The funeral was held Wednesday, and the many floral tributes testified to the great esteem in which the deceased lady was held.

We extend our sincere sympathy to Mr. Rackham and family in their sad bereavement.

John H. Dunkelberger.

John H. Dunkelberger, who, in partnership with Mr. Beears, conducted a florist's establishment at Reading, Pa., died suddenly on February 23 of paralysis of the heart. Deceased was 38 years old and leaves a widow and three children. He entered into partnership with E. H. Beears on February 7. Prior to that time he was a well-known stove mounter at the Mt. Penn Stove Works. Mr. Dunkelberger was a member of Wyomissing Council, Royal Arcanum, Knights of the Golden Eagle, and St. Paul Reformed Church.

Anton Brigel.

Anton Brigel, a florist of Columbus, O., died at his home on February 25, of cancer of the stomach. The deceased was born in Baden in 1842. Most of his study of botany was pursued in schools and universities of the old country. In 1883 he came to Columbus and opened a florist establishment in South Columbus. Three years later he moved to North Columbus, where he lived until the time of his death. He is survived by a widow and five children, three sons and two daughters, Frank A., Carl J., Leopold J., Theresa M., and Julia K. Brigel.

Anthony Wollmers.

It is with regret that we announce the death of Mr. A. Wollmers, the well-known florist of 25th street, Brooklyn, N. Y. Mr. Wollmers had been quite ill for about four months, but not until the day before he died was his condition considered serious. He would have been 70 years of age had he lived until May next. His death occurred on Wednesday, February 25, and the interment took place in Holy Trinity Cemetery on the Saturday following.

The deceased was born in Germany and learned the gardening and florist business in that country. Coming to the United States while still a young man, he followed his occupation with Weir, the Greenwood Cemetery florist. He was a veteran of the civil war, and established his own florist business just 21 years ago. He leaves a widow and four sons, two of whom, John and Frank, will continue their late father's business.

Nicholas Ohmer.

Nicholas Ohmer, the veteran Ohio horticulturist, died at his home near Dayton, on Friday, February 27, aged 80 years. He was born in France, coming to this country when quite young with his parents. He, in partnership with his father, conducted a confectionery business, latterly turning his attention to horticultural pursuits, especially the cultivation of small fruits, particularly strawberries. He was the originator of the barrel system of growing the latter fruit.

His life was a busy one, and he attended actively to his own affairs till it was utterly impossible for him to do so. He was a member of Sacred Heart Church, president of the School Association of that church; vice-president of Calvary Cemetery Association, a director of the Merchants' National Bank, president of the Montgomery County Horticultural Society, president of the Montgomery County Farmers' Club, and vice-president of the Ohio State Horticultural Society. Mr. Ohmer was also active in conducting county and State fairs, having been connected with such enterprises, exclusively to promote interest in the various lines of agriculture and horticulture, for more than a quarter of a century. A widow and eight children survive him, one of his daughters being the wife of E. G. Gillett, of Cincinnati, O. A son, C. J. Ohmer, is in the employ of Mr. Gillett, another son, Harry S., being proprietor of the Grand Hotel, Indianapolis, headquarters of the American Carnation Society in that city last year.

Chicago.

Among Growers.

A visit to the establishment of August Jurgens, one of the largest forcers of bulbous flowers for this market, found his place in nice shape, and an immense quantity of stock on hand, in bloom and otherwise. He has also one or two houses devoted to Spring bedding plants, in which he has a good trade. He is the largest forcer of lily of the valley for the local market, doing an immense business therein. He is forcing upward of one million pips this season, and has a model cold storage room in direct connection with his greenhouses, never having to go outdoors at any time for his pips. The temperature is never above the freezing point, yet the pips are not frozen. Mr. Jurgens has the finest cellar for keeping cut flowers the writer has ever seen, having zinc pans and rack, where each bunch of flowers can be kept upright, doing away with the handling of vases. And if he wishes, he can keep a continuous flow of water running. He finds the expense of installing this system, not so great as the outlay for vases. It is also a good deal handier to operate.

The Week's News.

With the advent of the Lenten season, trade, both wholesale and retail, has fallen off considerably. This has caused a cheapening of all kinds of stock, but at the present writing the market is a little firmer than during the latter part of last week. Retailers report their sales on the increase. The falling off in prices has been more noticeable this year than ever before on account of the higher figures that have prevailed for stock of all kinds; in fact, it can almost be said that Christmas values have obtained up to a week ago. But with bright and warmer weather with us there is no doubt that, with an increasing supply of stock, the tendency of the market will be downward.

Stollery Bros. report that the average of good lilies with them this year will be about 90 per cent. This firm does an immense business in bulbous stock of all kinds, and is handling its own cut this year, having rented space in the Chicago Flower Growers Co.'s market.

Frank Garland has remodeled his store somewhat by enlarging the office space, which makes a decided improvement. The store is now in charge of Frank Lockyear, formerly with J. B. Deamud.

J. B. Deamud is receiving some fine orchids, among them cattleyas, Coelogyne cristata and cypripediums, which find favor with the retailers. Mr. Deamud has handled upward of 1000 cases of wild smilax this season.

Vaughan's Seed Store reports trade not so brisk as in former years at this time, due to the severe cold weather recently experienced. The employees of Vaughan's Seed Store and those at the greenhouses will bowl a series of games at La Grange on Saturday night, March 7.

Edgar Sanders continues to improve, regardless of reports to the contrary.

Visitors: John Degnan, St. Paul, Minn.; J. D. Carmody, Evansville, Ind., and Wm. Edlefsen, Milwaukee, Wis.

ROBERT JOHNSTONE.

CARNATIONS

Seedling Carnations.

A great number of florists, who have made the raising of carnations their specialty, have now a bench, or at least a part of their bench-room, devoted to the growing of their own seedlings; and I know of several who started the work this season, also determined to try their luck. This work, which might more aptly be termed a pastime, breaks pleasantly into the dry routine of carnation growing, adding a feature of rare interest, heightened by that peculiar charm inseparable from playing at a game of chance. If seedlings are grown merely with the expectation of carrying off a first prize or of possibly producing a flower excelling others now existing, this undertaking is subject to great disappointment. To aim at great achievements in that direction is certainly laudable, but it should not be the only object in view.

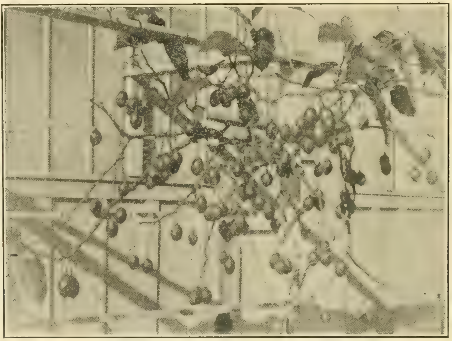
The raising of seedlings every year, instead of being only a pleasant biplay, could be made to be one of the most important branches of carnation culture. By the judicious expenditure of a little money at the start and the subsequent exertion of a fair intelligence, every grower would produce his own new carnations, and by careful selection from year to year would be enabled to gradually discard his emaciated, unproductive old kinds and in their place stock his greenhouses with new, vigorous and floriferous plants of his own raising, naturally adapted to his soil and locality, and the requirements of which he would be thoroughly acquainted with. Seedling raising, regarded in this light and systematically carried on with this end in view, would become a side line of practical value, and this additional interest would not impair its original character as a venture full of fascination and grand possibilities.

Wide-awake growers are now well aware that an annual addition of new kinds to their old stand-bys has become a necessity; they have learned by this time that either high priced novelties must be tried, or, if their business did not warrant an outlay like that every year they would be at last compelled to discontinue carnation growing entirely. Then why not raise your own seedlings? Invest in a moderate way in such of the novelties as you believe to be better than your own stock, or which, by reason of their greater vigor, size and variety of color, could be used to advantage in the process of crossing, thus enabling the beginner to start right.

In the case of carnations it is not difficult to raise new varieties, and what is more to the point, it is not at all difficult to raise good ones always better at any rate than those grown in the same place that gave birth to the new set, and fully as good as many of those offered for sale by other growers. But, as I have pointed out, a few of the newer kinds, not strictly first-year novelties should occasionally be bought in order to obtain new material as a basis for cross-fertilization, especially if those on one's own place, on account of color or defective constitution prove to be undesirable for that purpose.

The first step toward the attainment of so noble an object is of the greatest importance and is really the only act in the whole performance which calls out some experience and unerring judgment. Whether our exertions are followed by success or failure, total or partial, depends almost entirely on the selection of the flowers designed to become the parents of the new offspring. Never, in any case, should inferior flowers be chosen, even if an excuse were offered in the circumstance, that the flower, originally selected to furnish the pollen, was not quite ready to yield it, while the other was waiting to receive it, and so the pollen from any flower ready and handy was taken, so as not to delay the operation.

It is my belief that the frequent failures in this line of work, as well as the over-abundance of poor and unreliable novelties, are due to the unrestrained impatience and indiscrimination on the part of careless practitioners. Of course, it would seem that the large grower, specially he who has made it a business to raise seedlings by the many thousands, had an advantage in this respect over the smaller one, inasmuch as he has a greater number of first grade flowers and colors to choose from; but this advantage is one only with respect to number of seedlings to be raised. As regards quality, the smaller grower may look for as great a percentage of high grade blooms as the final result of his labors, as the other, by practicing a little more patience, abiding his time and utilizing the right moment.



BRANCH OF TREE TOMATO IN FRUIT.
Courtesy of Mrs. Theodosia B. Shepherd, Ventura-by-the-Sea, Cal.

Just which flowers to select and how to avoid mismating is not hard to learn, but difficult to teach, and rules based on the laws of nature and one time considered by some as absolutely necessary to be observed and requisite for insuring best results, have been found to be like many other rules unreliable and therefore subject to modification by later experience. In crossing carnations the pollen should be taken from flowers that are perfect as to calyx and corolla—this includes form and substance. These flowers should be on a strong, stiff stem, carried upright without being tied up in that position, and this stem should not be any longer than twenty inches from the heart of the plant and its joints (internodes) should not exceed three inches in length; and finally the plant should be healthy, vigorous, with numerous short, stubby, thick side shoots. These are the points of importance to be considered first in selecting a pollen parent. It is a great mistake to select those flowers that furnish the most pollen. Bursters shed it in greatest abundance—a stem, longer than 24 inches, surmounted by a split calyx, that is spilling its contents all on one side, exposing a center all yellow with pollen-covered anthers, is a flag of distress, displayed by a plant, fast sinking. The flower to be chosen for the seed-bearer should also be a fine bloom on a good plant, but it is not essential in its selection to strive for the ideal, as long as its reproductive organs are conspicuous, the pistil stout, not high, but spreading to a considerable length, appearing like a pair of well-set horns. The stamens of this flower are cut away as soon as it opens, together with some of the inner petals, to facilitate the manipulation of fertilizing the pistil. This should be done when both the flowers are "ripe" or in right condition, which can easily be seen. And, if possible, this operation should be performed on a sunny, clear day in the forenoon.

The pollen may be transmitted by using a piece of glass or wood, or, which is still better, a small camel's hair brush, and dropped or spread over the upper surface (stigma) of the pistil. Or the male flower may be cut and by shaking it over the other, the same end is attained, though some of the pollen is wasted in that way. Should the female flower not be in right condition, while the other is, the pollen may be gathered on a piece of glass, and if kept dry, it will retain its vitality for weeks.

Several female flowers may be fertilized with the pollen from one male, but a female ought not to be receiving the pollen from several male flowers; and the greater the difference between the two, the better results may at all times be expected, while the crossing between two or one and the same variety (inbreeding) should be avoided. (The words staminate and pistillate, or male and female, used when speaking about cross-fertilization of carnations, are botanically incorrect, but they are handy and have therefore been employed by all growers as technical terms, just as hybridization, which is also out of place in this case.)

The flower designed to bear the seed will, after receiving the pollen, soon indicate by wilting, whether the operation was successful or not; in the latter case, it must be repeated, until it has "taken," and fructification, so far assisted by human ingenuity, is now left for its completion to nature alone, and from now on the course of the experimenter follows a smooth and even road.

Keeping an accurate record of parentage is not at all necessary, and would only prove desirable and of value in case it was found that the crossing of certain varieties was followed by extraordinary results, which process could then be repeated and followed up. Otherwise, this laborious and troublesome work is useless. Extra good stock is all that is wanted; whether we are posted as to the exact pedigree of the different kinds or not is immaterial.

The seeds should be allowed to get thoroughly ripe; this will take about from two to three months, according to the condition of plants, locality and weather. They ripen quicker in a bright season, but are not any better on that account. If, after they are ripe, they are left too long on the plant, they will germinate there and spoil, especially if the house is kept very moist. When the pod surrounding and containing the seeds begins to look light brown or leathery and feels dry it should be cut off and the seeds sown at once into ordinary good soil and treated in all respects the same as the seeds of other common plants; nor does the subsequent mode of culture differ in any way from that employed in the growing of other plants. The seedlings are either pricked off into flats, or potted up into two or two and one-half inch pots; the very early sown getting a shift into larger pots before Spring. They all should be cut back once before planting out in the field.

As soon as the condition of the soil and the weather permits, they should then be planted out. They can go out much earlier than carnations that are raised from cuttings, being much hardier and not easily damaged by frosts in early Spring. Most of them will flower sooner or later in the field. They should then be often gone over and examined. Good flowers are marked or labeled, or a number is given corresponding to the number in your memorandum book, with a brief description of that flower. Poor plants, including those diseased, single flowering and those of feeble, sickly growth, are thrown out, and the remainder planted into the greenhouse in September, some as late as October. The soil to be used in the benches ought not to be very rich; good earth, fresh and sweet, is all they want, with an addition of a little sand, if your soil is too heavy.

Some growers keep their seedlings in pots the first year, shifting them several times into pots a size larger whenever necessary, and keeping them in frames outside, at the same time pinching out every bud as soon as it shows. By the middle of August they will be in four or five-inch pots, and they are now planted out of these into the greenhouse bench. A lot of smaller ones, or those sown late, are kept in pots, as a reserve to take the place of the single-flowering and worthless plants, which from time to time will have to be thrown out of the bench as soon as discovered.

I myself prefer the latter course. Of course, by adopting the former method the field culture we need not house any bad or inferior plants, but many of these plants, proving useless outside might have made good inside stock' and a good many of those showing a fine flower out in the field often prove great bursters, or "rogues,' inside. By keeping them in pots and not allowing them to bloom until they are firmly established in the bench, we have to handle several times plants which are eventually thrown away, that is true, but we are enabled to judge the others more correctly—those of real importance. This advantage offers sufficient compensation for the loss of time sustained by the repeated handling of worthless plants, which generally amount to about one-third of the entire lot. I do not mean to say, however, that the rest of them, or the other two-thirds, would all be grand bonanzas; no, not likely; but some of them will be extra good, others good enough to take cuttings from and work up a stock, as will be done with the extra good, and the remainder of them will not be bad, and will furnish flowers for the store in abundance until they are thrown out next season, when their usefulness will have come to an end.

FRED. W. TIMME.

Tree Tomato.

Editor Florists' Exchange:

I note an inquiry of late regarding the tree tomato and a lack of information on the subject. I have grown it for several years and have always felt it had a future in California as a fruit for shipping. It is a handsome ornamental tree, the fruit attractive and delicious in flavor, useful in various ways. The plant comes into bearing at the holidays, when other fruit is scarce, and as it ships perfectly long distances it is destined to have a great commercial value. It is very little known yet even in California; people are so fearful about going into a new thing that they always wait for some enterprising person to pioneer it first and make some money and then everyone goes into it, too.

I send a photograph of a branch of Solanum betaceum in fruit, which perhaps you would like to illustrate.

THEODOSIA B. SHEPHERD.

Citrus Trifoliata as a Hedge Plant.

Editor Florists' Exchange:

All that Mr. Joseph Meehan says in your issue of February 14 about the desirability, hardiness, etc., of Citrus trifoliata as a plant for hedges of a defensive nature is true. There is not the least doubt that for all localities where it will endure the Winters there is no other plant which will make a hedge that is at the same time so defensive, so ornamental, so easily cared for and so devoid of undesirable features. These are strong claims to make for any one plant, but they have all been abundantly substantiated in the many years in which this plant has been growing and under observation in this country.

Wherever a defensive hedge is wanted in the Middle, Southern, lower Western and Southwestern States this hardy Japanese citrus should be given a trial. It should prove just the plant which J. H. Crane, of Tennessee (vide page 6, issue of January 3), wishes to enclose his vegetable and fruit garden. For several years past it has been recommended for hedges in the sections named, but it is evidently difficult to convince people that an orange (or lemon, as some botanists class it a limonia) can possibly be hardy outside of tropical or semi-tropical regions. But this plant has been growing and ripening its fruits for many years now in the open ground in Fairmount Park, Philadelphia, and longer yet in the grounds of the Agricultural Department at Washington. I saw the Washington plants in the Spring of 1899, after the fearful blizzard and intense cold of the preceding February, and they were absolutely unharmed in any particular.

Some years ago Professor W. F. Massey, of the North Carolina College of Agriculture, wrote in Orchard and Garden: "We have no doubt that the hedge plant of all others for all parts of this country has at last been found; and its adoption can only be a question of time. . . . This plant is a true orange. Don't start and say nonsense, and that no orange can be hardy enough for this purpose, for this question has been settled. The plant I refer to is the Citrus trifoliata, called by some Limonia trifoliata. . . . The writer planted thirteen of these trees in the hills of Northern Maryland, in the Spring of 1880, in a locality nearly 800 feet above tide-water, but in a valley where frosts lay heavily. The following Winter these little plants, which were seedlings out of four-inch pots, and had made long sappy shoots late in the Autumn, which were unripe when Winter set in, were exposed to a temperature of 18 degrees below zero and 4 degrees below at noon, with a bright sunshine and no snow on the ground. They were entirely unprotected during the whole of this spell, the coldest I ever knew, but were not injured in the least. These trees have never been protected and are now in full bearing."

And many years ago Dr. G. Devron, of New Orleans, wrote in the Southern Horticultural Journal: "Having been one of the first to cultivate the Citrus trifoliata in the open ground in the United States, and perhaps the first to see it bloom and produce fruit in this country, I must say that I know of no variety of the citrus family that can be more neglected, more exposed to the extremes of temperature, or to excess of moisture and dryness, with so much impunity. In seventeen years that I have had this citrus under observation I never found an injurious insect on the tree or its leaves, flowers or fruit. The tree in Louisiana grows to the height of ten or twelve feet, with numerous straight, stout and very sharp thorns (a good substitute for our barbed wire)."

Recently in going over my files of Garden and Forest I found in the issue of October 30, 1895, the following note on Citrus trifoliata from the State Experiment Station, Geneva, N. Y.: "While this member of the orange family has not come up to the expectations of some growers as a hedge plant for the North and West, yet it is of interest to note that a plant received at this station in 1892 is still alive, though it has had no protection. It makes a sturdy growth each season of about three feet, which is as regularly killed back to the snow-line in Winter."

A note addressed to the station asking for a further history of the subject elicited the information "that the shrub in question killed to the snow line each Winter, and after living this way for a few years was finally dug out." This proves very conclusively that while this shrub is perfectly hardy at Philadelphia (and doubtless farther north in the vicinity of the coast), Geneva is above its latitude of successful culture without protection in Winter. It is to be regretted that the station did not try the experiment of bending down, or in some other way protecting the shrub for two or three Winters to determine whether the wood of that age would not have proved capable of withstanding the cold.

As to its qualities for hedge purposes Professor Massey, in the article already quoted from, said: "Its advantages as a hedge plant are its natural dense habit of growth and the abundance of its sharp thorns. It is naturally a dwarf tree and will need but little trimming to keep it within bounds. It will never become a nuisance, like the so-called Osage orange or Maclura, by sprouting from the roots. . . . Every branch and twig is of a bright, glossy green, and in Summer and Winter it will make the most ornamental of hedges. . . . We hail it as the most promising plant yet found to take the place of the miserable Osage orange and give us a real defensive hedge without plashing or tying to 'patented' wires, and at the same time a most ornamental fruit-producing hedge."

I believe there is a hedge of this plant a half a mile or more long on the property of the Fruitland Nurseries, in Northeastern Georgia, and the Jessamine Gardens, at Jessamine, Pasco County, Florida, have one a quarter of a mile long that is being trained into the most defensive barrier of anything I ever saw in the line of a hedge. In the Spring, just as the long, slender, whip-like shoots of the preceding season show signs of breaking into growth, they are bent over to the right and the left and interwoven with the shoots from the adjoining plants. These horizontally entwined shoots send up a crop of perpendicular shoots which are, in their turn, the following Spring, bent down and intertwined; and as the weaving process was begun at an early date and started close down to the surface of the ground a spiny wall is being raised which will turn even the famed "razor-back" hog of the South, to which the barbed-wire fence is merely an agreeable irritant. Mr. Meehan says: "I do not think any animal would go through a mature hedge of it." I do not think any animal—not even an elephant—could go through a hedge of it, trained as is the one in question.

When used for hedging purposes the plants are usually set from 18 to 24 inches apart in a single row, and the first Fall after growth ceases the plants cut back to a uniform height of one foot, the next Fall to two feet, and so on until four feet high. But it would certainly seem worth while to practice the interweaving, instead of pruning, for the first two or three years at least. The shoots are very pliable at the proper time, and if the hands are protected by leather gloves, or mittens, very little discomfort need be experienced with the thorns. In good soil, an impenetrable hedge can be grown in three years from planting; and but little trimming or training is required after the third year. Its growth is mostly upright, spreading out but little, and the sides form remarkably even walls without any trimming whatever. Such a hedge is an ornamental object at all times, whether in Spring while covered with its myriads of white flowers, in Midsummer in its darkest green robes of clover shaped leaves, in Fall laden with small yellow fruit, or during the Winter months when every branch and twig is a bright glossy green. Even at the North the plant will, during some seasons, bear two crops of flowers, the first in Spring and the second along about August.

The statement has been made and printed that this plant was first introduced into Louisiana and from there to the Government Gardens at Washington; but Meehans' Monthly for July, 1893, contained the following interesting note on its introduction, from Mr. W. Saunders, of the United States Department of Agriculture: "In the Spring of 1869 the Department of Agriculture received an invoice of orange trees from Japan. In crossing the Rocky Mountains they encountered severe weather, and reached here a solid mass of ice. They looked bad. After unpacking them they were placed under a greenhouse staging where they would recuperate if any life was left in them. Very few of the tops recovered, but the stocks upon which they had been worked budded forth in profusion. These growths puzzled us for some time; they did not show much externally to class them with the citrus family. After a time a drawing and description of the plant was found in an old botanical work, where it was named Citrus trifoliata. Linn. Supposing that this might prove to be a superior stock for oranges, an order was sent to Japan for a quantity of seed. This order was duly filled and from it several thousands of plants were produced, and for several years these were used as stocks for budding oranges of different varieties. . . . Some plants of Citrus trifoliata having been planted in the shrubbery border, proved them to be perfectly hardy in this climate, and their growth indicated a remarkable adaptability as a hedge plant. For the purpose of introducing it as such, further orders were placed for seed from which many plants have been produced and distributed for trial as a hedge plant. In climates where it will stand I do not know of a more formidable plant for strong hedges for live stock inclosures."

This plant is offered in the advertising columns of The Florists' Exchange at prices so low as to admit of its being widely employed for hedging purposes wherever it has or will prove hardy, and so distinctive and ornamental is it that at least one specimen should be included in every collection of shrubs even in localities where the Winters are so severe as to necessitate its protection.

VIEW OF KELLER & CO.'S STORE, PROVIDENCE, R. I.

Philadelphia.

Florists' Club Meeting.

There was a large attendance at the meeting on Tuesday last. Several who were at the Carnation Society's convention gave brief accounts of the exhibits of new varieties, all agreeing that the exhibition was a good one and that giving free admission to the public was certain to result in good to growers and dealers of carnations. Robert Craig said he wished that as much interest could be infused into the Rose Society, but this was difficult; as while five or six new carnations were brought out each year that were considered better than existing varieties, only one new rose that excelled present ones came along in probably eight or ten years.

Arrangements were made to hold a banquet in the club room on Wednesday, March 25, to entertain members of the trade visiting the rose show.

At the April meeting F. Greensmith, who has charge of the herbaceous plant department at the Riverton nurseries of H. A. Dreer, Inc., will read a paper on "Some Useful, But Little Known Plants." At the May meeting Walter Whetstone, of Whetstone & Co., Inc., will give a paper on "The Iron Pipe Question." As this firm guarantees to supply wrought-iron pipe, something of interest may be expected.

In Common Pleas Court No. 1 this week, Judge Bregy presiding, the jury awarded Mrs. Ruth Standen $10,000 damages, and her husband, Henry S. Standen, $12,125, against the Pennsylvania Railroad Company for personal injuries sustained by the wife on August 3, 1901. While Mrs. Standen was in the act of alighting from a train at Haverford, it was testified, it started and threw her from the rear steps of the last car to the station platform. Her spine was so badly injured that she is now a hopeless paralytic. She has lost the use of her senses and is unable to arise from her bed. It was proven that she had been of great assistance to her husband in his business of florist. She was very expert in that line, and her husband said that he could not get any one to replace her. It was for this reason that the husband demanded ample damages for being deprived of his wife's services in addition to claiming reimbursement for the expense he had been put to and is at present undergoing in procuring constant medical attention for her.

The trial was conducted by Attorneys Alfred D. Wiley and Frank S. Elliot, on behalf of the plaintiffs and by Bispham & Barnes for the defendant railroad. The jury was out deliberating upon the verdict for eight hours. The husband's verdict is one of the largest of its kind ever recorded in the local courts.

Devoe B. Edwards, of Atlantic City, was in town this week and reports having had a very good Winter business—much better than usual—and is now doing a very large Lenten trade.

Two rose growers are heard of who will not plant as many American Beauty next season.

John Welsh Young will build two houses this season, each 22x100 feet.

Captain George Moss will take a bowling team to Baltimore on Monday next to roll three games with the florists of that city, returning for the annual dinner of the local club. They leave Broad street station at 10.12 a.m.

Boston.

The News.

Business during the first week of Lent was fully as dull as expected, both in cut flowers and plants. There is little going on at the retail stores except funeral work; very few outside decorations of any sort.

Beginning Monday, March 9, Welch Bros. have arranged to open their store at 6 a.m. to accommodate the large number of out-of-town buyers who come to the city on early trains for their supplies of flowers.

Among the Growers.

On my first visit to the new house of J. C. E. Dickerman on Mill street, at Harrison Square, Dorchester, I was most agreeably surprised in the first place by the magnificent house and, secondly, by the fine appearance of the carnations at an establishment in operation less than a year. The house is a model of construction, erected by Hitchings & Co. It is 160x60 feet, even span, glazed with 16x24 glass and heated by two Weathered boilers. There are six benches and seven walks, thus giving walks along either side. The peculiar feature of the house is its extraordinary height at the center, a feature which many claimed would be detrimental to the success of the crops, but a visit to the place will convince anyone that such is not the case, when such stock as Mr. Dickerman is turning out and has turned out right along is considered. The house is planted to many of the leading varieties of recent introduction, but Cressbrook is the favorite of which there are two thousand plants grown to perfection and from which the bunch which captured the Warburton prize at Brooklyn was cut. The variety stands up just as well as Lawson on the next bench, is much more prolific and throws flowers of almost equal size. These two varieties suffice for dark pink. For light pink, Fair Maid and Morning Glory are sucessfully grown, and in white Ward's Flora Hill sport, Lorna and Queen Louise, with the latter variety giving most satisfaction. Governor Roosevelt and General Maceo for dark red are doing well, while for scarlet Apollo is considered far superior to either of the other reds, J. H. Manley, G. H. Crane or Mrs. Potter Palmer. There are also small batches of Gaiety, Viola Allen and Admiral Cervera for variegated varieties.

Mr. Palmer, the grower, tells us that he is receving many orders for rooted cuttings, especially for Cressbrook.

On the same day I dropped in at Whitten's on Center street to see the lilies which are coming along nicely for Easter. Patrick Boyle, manager, says that he noticed very little disease this year, but many of the plants are very short and stocky. The foliage, however, is very clean and perfect, and the buds are showing up well. The rose houses are about off crop now, but there is prospect of a good cut at Easter, especially of Bride. Next season Mr. Boyle is to substitute carnations for one of the houses of roses, and has secured a nice lot of young stock of very good varieties.

At L. H. Foster's all are busy with orders for the new fern Anna Foster, which looks more beautiful now than at any time before that I have seen it. An immense stock has been worked up, and it is selling very fast.

The A. T. Stearns Lumber Co. informs us that the concern is figuring and estimating on an exceptionally large lot of building for the coming season, and is now beginning to ship materials. The firm is preparing a catalogue of the hundred and thirty-nine new houses supplied by it last season, with cuts of nearly all of them, which catalogue will soon be sent out.

W. A. Manda returned this week for another day or two in the city, leaving for home Tuesday. F. J. NORTON.

PORTSMOUTH, N. H.—E. T. Schurman has sold his seed and agricultural store on Market street to his brother, Arthur W. Schurman, who will take personal charge of the same. The former will move his family to Concord, where he will make his future home.

YPSILANTI, MICH.—Mr. [illegible], the florist of S. Washington street, has sold his greenhouse to Mr. Norton, of Lowell street.

Canadian News

Hamilton.

Club Meeting.

The regular meeting of the Gardeners and Florists' Club was held on the 3d inst. A special effort was made to secure a large gathering of growers, whether members of the club or not, and those who are not members were specially invited to attend to see about taking some action as an organization toward the bettering of prices. The attendance was disappointing; some of the men whose business interests would be best served by better prices did not show up. After a preliminary discussion it was decided to lay out a scale of prices to which all club members would be asked to adhere, and outsiders would be requested to do the same, as it was believed that business interests would secure the co-operation of those not now members of the club. A beginning was made on the scale of prices, and R. Potter, E. J. Townsend and J. W. Fox were nominated as a committee to finish it, and present it at the next meeting, when the matter will be finally disposed of.

Among the various arguments presented for a rise in prices were the following: The increased cost of glass, lumber, pipes and fittings, pots, coal, labor, and even the cost of drawing potting soil. It was also pointed out that those who employed help, both florists and gardeners, required better prices to enable them to pay their help better wages, it being claimed that gardeners in this city are paid less than ordinary laborers.

The officers and interested members of the club are displaying commendable zeal in their efforts to make the club of material assistance to the trade of this city. It is certain that if the present course is pursued outstanding men will come in one by one and join hands with the club. By the way, what was it that Josh Billings said: "My son observe the postage stamp; its usefulness depends on its ability to stick to one thing until it gets there." Every one can note it down that the club is still in business, and is here to stay.

News Items.

There has lately been a combine of the local pot manufacturers, and a rise in prices is the result; it was needed, too, I should judge, as some low figures have prevailed.

The weather is mild and Spring-like. The first robin was seen weeks ago; we are getting to think that they must stay around all Winter now.

R. Potter is getting grand crops of carnations.

Fred Foster, Jr., is railroading again. BEAVER.

Montreal.

Club Notes.

Every chair in the club room was occupied Monday night and many had to find substitutes. There could not have been less than fifty members present. To find the equal of the last few meetings, it is necessary to go back ten to fifteen years when the club was on its first wave of prosperity. There were other attractions than papers and question boxes at those meetings. Few of the older members forget the hornpipe danced by Mr. Bland when the waitress deposited a plate of hot soup between his neck and his shirt collar, and he refused to listen to President Doyle, who explained how thankful he ought to be that his clothes weren't spoiled. If these big meetings are to be sustained it is up to the executive to hustle. No doubt the members, many of them, went expecting to see the advertised carnation exhibition, but that like the chrysanthemum show prize list we amended at the last meeting, was not in evidence. It would be most unfair to ignore the fine exhibits of local flowers by Hall & Robinson, P. McKenna & Son and Wilshire Bros.; but local flowers are not what the members went to see. We can readily understand the committee could do nothing in regard to the parties who made no answers to the request of the club for exhibits, but we can't help thinking a telegram at the last moment would have refreshed the memory of the growers who promised exhibits and then did not send them. In reference to the local exhibits a considerable amount of information was gained. Mr. Robinson reported that with him Mrs. E. A. Nelson, is strong, free and satisfactory. Cressbrook is a good thing and will improve on further trial. J. H. Manley has a very poor color. Estelle is the best scarlet grown locally—not only is it a true scarlet, but it is a very free bloomer, its only fault being that it made so few cuttings. The flowers of Jubilee shown were as good as ever; but, unfortunately, this grand variety is rapidly deteriorating. Mrs. Lawson was unanimously conceded to be the peer in its class. Prosperity, as far as grown, is a commercial failure; it is altogether too shy a bloomer. Glacier is without question the most free blooming white and the best all-round carnation grown here to-day. Mr. Robinson said that their cut from Glacier was just three times as large as from any other variety they grow.

In addition to a general collection of splendid carnations, P. McKenna & Son had a bunch of Blanche Ferry sweet peas, grown on the single stem system; these were simply grand. The colors were bright and clean, with an average of four flowers on each spike; the stems were over a foot in length and as rigid as wire.

Among other things Wilshire Bros. had a vase of Murillo tulips. These, fine as they were, are said to be surpassed by Salvator Rosa.

The Windsor Hall was ordered engaged for the chrysanthemum show, and the prize list will be in the hands of the members and any other party who wishes to have it, in a day or two.

J. P. D'Arcy, manager of the Eastern Township Nursery Company, read a paper on "Flowering Shrubs." Only a few varieties were taken up, the others being left for a second paper.

Four members were elected: Mr. Putress, Point Claire; D. A. Wright, Drummond street, city; A. H. Walker and J. Keen, Verdun.

The report of the committee on a more suitable hall for the club meetings was referred back for further report. B.

THE MARKET

LONDON, ONT.—Bride and Bridesmaid, $6.00 to $12.00; Golden Gate, $6.00 to $12.00; Meteor, $6.00 to $12.00. Carnations, inferior grades, all colors, $2.00; standard varieties, $3.00 to $4.00; daffodils, $3.00; hyacinths, $3.00; lily of the valley, $3.00; tulips, $3.00; violets, 75c. Roses are coming in more plentifully, and the quality is improving; the supply is not equal to the demand. Carnations are still in very short supply, white being at a premium. Daffodils and tulips are plentiful, with good demand. Violets are more abundant, the demand dropping off. With the bright weather there is an increased call for flowering plants, azaleas, Primula obconica and bulbous stock moving as fast as it comes in. G.

TORONTO.—With the beginning of last week, business took a turn, and, excepting some small orders and a little funeral work, the latter part of the week was very dull, with stock of nearly all kinds very plentiful. On Saturday there was a regular glut. Our principal streets were almost like a flower show. All the leading provision stores have gone into the flower business, and all appear to be able to get any quantity of stock. Bulbous flowers are still very abundant. It is almost impossible to quote prices. Several stores were selling good tulips last Saturday at 25c. per dozen. Carnations and violets were also very cheap. Roses are yet rather scarce, but there is not a very great demand for them at the prices they are held at. The bright weather will likely bring them in plentifully.

Plants are being sold more freely, but prices are generally low, and one wonders how the plantsmen expect to pay for their coal. The weather has been fine; we have had some sun and not much frost.

A small army of Dutch travelers was in the city last week, all having something cheaper and better than any of the others. T. M.

OTTAWA.—Cold nights and bright, sunny days give all stock a good appearance. Bulbous flowers are plentiful, of fine quality, and sell well. Roses and carnations are not up to the demand. Trade has been very good.

The plant business is beginning to feel "Spring," and a little movement in flowering stock is noticeable.

Easter stock is looking well, although the bright days cause the florist some little anxiety, especially with regard to azaleas. Niobe, the standby in white, seems as if it will not be kept back. Lilies are also full early.

This week some of us hope to visit Toronto and see the newest in carnations. E.

MONTREAL.—With the advent of Lent trade keeps normal. The decrease in the number of large affairs is counterbalanced by the increase at small parties. Flowers continue scarce, carnations more so than roses; which, by the way, have at last fallen to 12c. Violets are plentiful and good, but the demand is still below the average of former years. In quality the general run of stock is about the average; no very high class material is to be seen.

Flowering plants are not at all plentiful, in fact, thoroughly good ones are very scarce and several of the stores look rather bare. Easter stock is coming along slowly, and even with the comparatively late date of Easter this year there is to be a shortage. Lilies will be scarce, at least good ones will. The Bermuda stock that looked so promising in the early part of the season is rapidly deteriorating, and a modest estimate of some of the best-looking lots would be 50 per cent. of the plants so badly diseased as to be useless. Crimson Rambler roses will also be scarce.

A nice comparison between plants grown during the Summer in pots and those planted in the field for forcing for Easter can be seen at one place here. The two lots were treated identically, but the field-grown plants are immeasurably superior. While the pot-grown plants average about four spikes of flower to a 5-inch pot, the field-grown plants, in 6½-inch pots, will run 8 to 12, and the trusses far larger. Spiræas will be scarcer this year, not because fewer are grown, but a considerable percentage failed to start properly. Azaleas will be in short supply; this will not be noticed, as they are plants very little in demand here at Easter.

The weather keeps very cold, indeed; zero readings are of frequent occurrence, and at present there is little indication of any change. B.

LOSSES BY FIRE.

SOUTHINGTON, CONN.—William Curtis' greenhouses at Plantsville, Conn., were gutted by fire, which started from an unknown cause, February 21. The damage is estimated at over $2,000, partially covered by insurance.

GREENVILLE, O.—Emanuel Beuchy, the nurseryman, whose stable was recently destroyed by fire, places his loss at between $300 and $400. This includes several tons of hay and fodder destroyed.

CARNATIONS ROOTED CUTTINGS

NOVELTIES—This Year's Introductions

Mrs. Theodore Roosevelt. A brilliant shade of deep cerise pink, flamed with carmine. Finely formed, average 3 inch flower on strong stiff stems. Habit vigorous, early, free. Fragrance, strong clove. Selected, strong, well-rooted cuttings now ready. $12.00 per 100; $100.00 per 1000.

Alpine Glow. A deep salmon pink on opening, which finishes a bright Daybreak tint. Good sized bloom, averaging 2¼ inches at this season of the year. Flowers of great substance and a splendid keeper and shipper. An extra vigorous grower; early, profuse and continuous bloomer. Cuttings taken last April produce plants carrying 25 to 30 blooms by the first of March. We believe this will prove one of the most profitable of the daybreak colored carnations. We shall have the following rooted cuttings ready for delivery at the dates specified: March 15th, 2,500; March 21st, 5,000; April 5th, 5,000. Price, $8.00 per 100; $75.00 per 1000. Quantity limited to the above.

Lillian Pond 2,000 selected plants from 2 inch pots, ready for immediate delivery, $10.00 per 100.

Her Majesty From 2 inch pots, March 10th to 15th delivery, $10.00 per 100.

Marshall Field From 2 inch pots, March 10th to 15th delivery, $12.00 per 100.

Gov. Lowndes Strong plants from 2 inch pots, for immediate delivery. $12.00 per 100.

Adonis Strong plants from pots, March 10 to 15th delivery. $15.00 per 100.

Enchantress From 2 inch pots, March 10th to 15th delivery, $12.00 per 100.

INTRODUCTIONS 1902

Harry Fenn. Extra strong selected stock, $50.00 per 1000.

Viola Allen. Fine strong cuttings for immediate delivery, $50.00 per 1000.

Stella. $6.00 per 100. $50.00 per 1000.

Challenger. Extra strong stock ready for immediate delivery. $5.00 per 100; $40.00 per 1000.

Gaiety. $6.00 per 100; $50.00 per 1000.

J. H. Manley. We have propagated a few thousand extra selected cuttings from this variety which we offer at $6.00 per 100; $50.00 per 1000, to those who wish to give it a trial.

STANDARD VARIETIES

Mrs. Lawson. 5,000 fine strong cuttings for immediate delivery, ready now and up to March 10th, $25.00 per 1000.

Golden Beauty. For immediate delivery, $50.00 per 1000.

Lorna. $25.00 per 1000.

Prosperity. Fine stock from 2 inch pots, $3.50 per 100; strong cuttings from sand, $25.00 per 1000.

Floriana. Fine stock from 2 inch pots, $3.00 per 100; strong cuttings from sand, $25.00 per 1000.

Gov. Roosevelt. $25.00 per 1000.

Among Growers.

Van Bochove & Bro. have a bench of callas that has borne huge crops of fine flowers all along, and is still in a most promising state. These are home-grown stock, and show a marked contrast to the California variety. The firm has done well again this year with American Beauty and Meteor roses. Glacier and Ethel Crocker carnations are a sight to behold as produced by Mr. Curran, the grower here. These much-abused varieties head the list as money-makers at this place.

At the Dunkley greenhouses carnations are in good crop and fine flowers of those old standbys, Flora Hill and Daybreak, show there is still money in them where they are suited. Roses are promising a good cut, also, before long.

In order to accommodate its increasing business the Central Nursery Co. has leased a large store on Main street, and will move in as soon as alterations are completed. The front part of the store will be devoted to a first-class flower business, and the rear converted into offices for the clerical force of the Nursery company. The company has also contracted for the erection of 12,000 feet of glass as soon as weather permits, and has purchased about 5,000 of the newer varieties of carnations, including 800 each of Enchantress, Adonis, Her Majesty, etc. A specialty of high-grade carnations and violets will be made, rounding out with a 200-foot house of American Beauty, all of which have succeeded remarkably well this year under the able management of Mr. Cook.

There is talk of another concern locating here in the near future. S. B.

Indianapolis, Ind.

News Notes.

Philip Conway is preparing to erect another greenhouse, 20x80 feet.

H. Junge has returned from Adrian, Mich. He reports everything in the florists line there O. K.

A. Baur speaks very highly of the Carnation Society's recent convention and the many new varieties exhibited there. Too bad that Baur & Smith's lot of carnations was frozen in transit, as the pink seedling, Indianapolis, showed up in fine form here.

The State Florists' Association of Indiana met Tuesday, March 3. The advisory committee on Fall show reported on several items.

Bertermann Brothers' establishment, in East Washington street, is already taking on an Easter air, with lots of Crimson Rambler roses, lilacs, azaleas and other shrubbery.

Visitors: J. D. Carmody, Evansville; L. Vaughan and Mr. Trillow, Chicago; James Begbie, New York. I. B.

Solid Beds vs. Benches.

Editor Florists' Exchange:

The present Winter will be remembered by every florist, for the long continued dull weather and the high price of coal. There is no doubt that many will find, at the end of the season, a very small balance on the right side of the ledger; and with repairs and necessary improvements staring them in the face, the problem is a very serious one.

To those who have to replace their old benches with new ones I would very earnestly suggest that they investigate thoroughly the solid bed method of growing roses and carnations. There are many who pronounce useless something they have not tried or understand. This is radically wrong, but it is too often the case.

The solid bed method has so many advantages over the bench that only a few need be mentioned. In the first place, after the drainage and soil have been filled in, there is comparatively no more expense, especially if the sides are constructed of brick they will last a lifetime. A bench will at best last but three years, and to replace it at the present price of lumber means a large outlay, which will increase year by year as the value of the material advances. The labor, too, is quite an item. I do not mean that every bench should be torn out, for I well know how useful they are for storing under them cannas, fuchsias and what not, still it will be admitted that they harbor insects, such as slugs and lice, etc. With the solid bed everything is clean and no harbor for insects is provided.

For carnations, all that is necessary, after they are thrown out, is to let the soil get perfectly dry, which will kill all the weeds and drive the worms away. Just before planting time, after the soil has been well dampened down, a good coat of rotten manure forked in is all that is necessary. If you intend planting a variety that requires a heavy soil, it is an easy matter to add some clayey loam, and your bed is ready.

With roses it is different. Once they are planted they will do well for five or six years; the only thing that is required is to dry them off gradually before cutting back. This is a very easy method, syringing occasionally to keep the red spider down, and giving all the air possible night and day. Even a slight frost before cutting back will not be detrimental. After a liberal supply of rotten cow manure has been lightly forked in and a good soaking of water applied the plants will start all right, still keeping the air on night and day more or less as the temperature outside guides you. But keep air on if you want good, strong growths and fine flowers.

The cause of so much mildew at times is attributable to the plants having been kept too soft, and not starting the fires early enough.

Doubtless there are some who will question the philosophy of this suggestion, and to those I would ask, Have you seen illustrations of some of the new 400 feet long greenhouses erected by some of our best rose growers, such as Messrs Asmus and Pierson? If not, look them up in The Florists' Exchange and you will see that all the roses in these houses are planted in solid beds.

Let me add, that I have seen carnations grown in solid beds just as fine as any bench-grown stock.

H. Y.

Dahlias

Editor Florists' Exchange:

We notice a discussion in The Florists' Exchange on the subject of planting two or more hills of dahlias of one kind together. If this be necessary, then we cannot grow any more dahlias. Last year we grew over 100,000 clumps in over 400 varieties, and we do not believe there is any virtue in that statement.

The assertion that a poor variety can be improved through the agency of bees is all right—if Mr. Tarbox grows his dahlias from seed; otherwise no improvement can be made.

News Jottings

Since passing through the last blizzard that reached the whole country we are having the finest kind of weather and stocks, as a rule, are showing the effects of the bright sunshine.

Easter stock almost everywhere locally is in the very best of condition, and with most growers everything is far enough advanced to be in on time. In fact, some lines as azaleas and cinerarias, will have to be held back to save them. Easter lilies will be in fair supply, mostly Lilium longiflorum, but as several growers have lost most all their stock through disease there seems to be no fear of an overstock. Crimson Rambler roses look better than ever, and should prove to be good sellers. Hybrid roses, especially Magna Charta, are being grown in large quantities as pot plants and should also meet a ready sale. Most all the growers are forcing hydrangeas for this Easter, but, to my mind, there will be plenty after, as some lots will not be on time.

Most all the growers of carnations report the outlook for a good cut as very bright; but the rose growers say that their plants have been pretty well cut down and that a very heavy cut cannot be had by that time.

John Mollenkopf has some very good cinerarias at the New Sheriff street market which are selling well.

Smiths, of Wade Park avenue, will have their new wagon out about the 15th. They intend to make a hit with it.

THE FLORISTS' EXCHANGE, 2 Duane Street, N. Y.

Pittsburg.

rnation Night at the Club.

It was carnation night at the rch meeting of the Florists' Club, h a most successful gathering, a exhibition of cut blooms, and a tty thorough discussion of all that s shown. The attendance was un-ially good; most of the growers were sent and took great interest in the eedlings. Those from outside points o sent blooms for exhibition were as lows: L. E. Marquisee, of Syracuse, Y., who sent three of his best Alba-ss, a fine white; the brilliant scarlet amingo, much admired by all present, l Sunbird, a good yellow, a color that in very little demand in our locality.

W. Ward, of Cottage Gardens, eens, L. I., showed eight seedlings, ong them two very good ones—No. , a white, and No. 216, a fine dark l, also No. 77, a good yellow varie-ted; Alpine Glow, a light pink; Mrs. A. Thayer and Ethel Ward. The ter variety was much admired and ll spoken of. Judge Hinsdale, a light riegated, had a splendid stem. Presi-nt and Mrs. Roosevelt were both fine; former was considered by all the st crimson on the market.

ailledouze Bros., Flatbush, N. Y., it two of their best sorts and the wers arrived in fine condition. White adt was pronounced to be the best er seen. Fragrance is one that would l well with us; it has a pleasing color d the odor is delightful.

The Chicago Carnation Co., of Joliet, , showed three varieties—Harlowar-n, Her Majesty and Marshall Field. e latter is a good one for show, but riegated colors are poor sellers in ttsburg. E. G. Hill Co., of Ricmond, d., sent a fine white that was well ought of, named Innocence. Peter sher, of Ellis, Mass., sent En-antress; Boston Market, a very good hite, and a variegated one, Mrs. M. A. tten.

Of the home growers the Pittsburg se and Carnation Co., of Bakerstown, ., made quite an exhibit of 17 varie-s—Norway, Peru, Lorna, Queen uise, and White Cloud, all whites. rna is a better flower than White oud; Queen Louise is a free and early oomer, and White Cloud seems to be best variety around Pittsburg, the st money-maker. Among the reds s. Potter Palmer was good. Estelle lls well; is a free and steady bloomer, d about the best red to be had here. mong the pinks Dorothy was well oken of, a very free bloomer, much tter than Wm. Scott. Cressbrook is nsidered good, and Mrs. E. A. Nelson as pronounced to be a fine early one, free bloomer, of fine color. Mrs. awson is much liked, is a good seller d easily grown by our florists. It lits more than formerly, but this is kely due to the dark weather prevail-g this Winter.

Of the light pinks, Mrs. Higinbotham a good one with fine stem. Gaiety ee, also Morning Glory, which has a ry pleasing color.

Of the variegated varieties, Stella, of Dorner's, is fine, a good bloomer d a profitable sort to grow. Pros-rity does not produce flowers enough make it pay with our growers.

The two best pinks were pronounced be Mrs. E. A. Nelson and Dorothy, most profitable to grow.

Ernst Fisher, of Castle Shannon, Pa., owed a few good blooms, among them aybreak, The Marquis, a cropper with m. Mrs. Lawson he considers best of l. Queen Louise is his best and most ofitable white, a good commercial rt, and the only one he cares to grow. m. Scott he still likes as a pink.

Mr. Fisher asked those who received plants of Adonis in what condition they came, and with the exception of one case they were all poor; about half of them lost; and the growers feel sore about paying a big price for such stock.

The club tendered a vote of thanks to all who exhibited and helped to make the meeting a success.

The high river the past week caused some inconvenience to W. C. Beckert, the Allegheny seedsman; also to the Pittsburg Cutflower Co., who had several feet of water in the cellar, the water coming in the sewer.

E. C. REINEMAN

Washington, D. C.

Congress closed March 4, and the hope that the Postoffice appropriation bill would get through intact and with the clause providing for the transmission of catalogues in lots of not less than two thousand, without postage stamps, has been dashed to pieces. There will be much disappointment at the clause above referred to having been stricken from the bill, and there seems to be a dearth of information as to why this was done. The elimination was made when the bill went to the Senate, and when it went to conference it was not restored. It is doubtful if there was ever a measure introduced which had such all-round, practical and equi-beneficial features as this one. It is a saving in time and labor for the postal department and equally so for the man who sends out the catalogues. It certainly is a meritorious thing. Possibly that was why it failed! Well, we'll try it again next year.

The weather of the past couple of weeks has been wonderful for the production of violets. The darkey boys can be found in the vicinity of the shopping centers in large numbers; 15c. per bunch seems to be a fair price for the violets offered by them, although some are still holding out for 25c.

Central Market now has a pretty good representation of florists, sales being confined mostly to carnations, roses and violets. Carnations go at all the way from 35c. to $1.00 per dozen. Kramer, of Anacostia, D. C., had some Mrs. Lawson that were the admiration of all and were decidedly good value for the price—75c. per dozen.

A very handsome window effect is to be seen in one of the Washington floral stores, created by the use of small incandescent lights, with pretty, red bell-shaped shades of crepe paper that fit around the bulbs neatly. The red glow seems to impart a lustre to the flowers that makes them doubly attractive.

I. A. B.

To Dispose of Soot.

Owing to the trouble caused by soft coal clogging pipes and chimney flues, the following suggestion is worthy of noting: "Zinc is a peculiar metal in many respects. It volatizes easily, and the oxide thus produced has a strong affinity for carbon. If one's furnace chimney is clogged up with soot and the owner desires to get rid of it, all that is necessary is to throw a little zinc scrap into the fire. Any old zinc will do, and very little will suffice to keep the chimney clean if used about once a week. The vapor of zinc oxide seizes upon the carbon of the soot and forms a new chemical compound, part of which goes up the flue and part falls to the bottom to be shoveled out as ash."—Water and Gas Review.

An Up-to-Date Establishment.

A visit to the establishment of Messrs. Pankok & Schumacher, of Whitestone, L. I., will well repay any visitor who is interested in Easter plants. It is seldom that one sees such healthy clean-grown stock in such great profusion. Each of the five large greenhouses is devoted to some specialty. The first house is full of azaleas from the dwarf own root plants of Chas. Enke and Marie Louise to grand specimens of Madame Van der Cruyssen and the other leading market sorts. I also noticed a splendidly budded lot of Acacia paradoxa, Erica persoluta alba and rosea, and the beautiful Erica cupressina. The foliage of the latter variety is a brilliant vivid green and is just as attractive as the pretty shell pink blossoms. The next house contains a fine lot of Lilium longiflorum just right for Easter. Upon inquiring of Mr. Pankok if they had any diseased ones, he heaved a sigh and pointed to a pyramid of dumped plants in the yard, and said there was no space in their greenhouses for poor plants of any kind, least of all lilies. I also saw a fine lot of hydrangeas, perfectly grown, and just right for Easter. In the palm houses there was a grand stock of Rhapis humilis and flabelliformis, imported some years ago and now in perfect condition; kentias, cool grown and as clean as a whistle, and the best lot of Pandanus Veitchii it has been my pleasure to look upon in an age.

Messrs. Pankok & Schumacher are nothing if not up-to-date. They have added orchids to their products in the last few years; a fine lot of Oncidium varicosum Rogersii are just coming into bloom. Dracæna terminalis is also a specialty with them, and as with everything else these people grow, the plants could not be done better.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 11 NEW YORK, MARCH 14, 1903 One Dollar Per Year

We are now booking orders for the

EW SCARLET ARNATION FLAMINGO

For Delivery January, 1904

Those who saw it will endorse our statement that it is, without question, the most luable New Variety shown at the Carnation Convention last week. All the leading perts agreed on its great value. We want a good scarlet carnation, and this is a great vance in this color. It is by far the largest scarlet carnation yet raised, borne on long, ong, stiff stems, and is a free and early bloomer. It will rank in quality with Mrs. Thos. Lawson, Enchantress, Prosperity, Etc. Was awarded the Lawson Silver Medal and S. A. F. Silver Medal. Scored 90 points.

There is sure to be a tremendous demand for this, and if you want to secure early livery, order should be placed without delay. Orders will be filled strictly in rotation received, so the earlier you book order, the earlier delivery we can make. Let us ve order at once while the matter is in mind.

We shall also have to offer for 1904 the following exceptionally valuable New Carnations

NELSON FISHER, MRS. M. A. PATTEN and ALBATROSS

Price of all the above, named varieties,

$12.00 per 100; $100.00 per 1000.

We offer also

EW WHITE CANNA MONT BLANC

Delivery March, 1903

This is the most valuable new variety that has been offered in years. It is an exceedingly e bloomer, producing large spikes of white flowers on strong branching spikes borne well ove the foliage. Dwarf habit—identical with Mme. Crozy in height and style of growth s great masses of snowy blossoms contrast splendidly with the crimson, pink and yellow rieties, and it will be found indispensable in all fine Canna collections. A Novelty of erling Merit.

$0.75 each; $7.50 per dozen; $50.00 per 100.

Sugar Corn Seed

Editor Florists' Exchange:

In your issue of March 7 appeared an article to the general effect that the previously reported shortage of sugar corn for seed was not being fully confirmed. This is seriously misleading, for, on the contrary, it is the fact that large dealers in sugar corn are either sold out entirely, or short in supply, without a precedent. Some small merchant dealers have a few bushels of it, 10 or 12 to spare, but what of that? These small supplies are only a driblet toward meeting the enormous demands from the sugar corn canners, many of whom plant from 1,500 to 2,000 acres in their respective neighborhoods, and consequently must have 400 to 500 bushels each.

Where are these supplies of thousands of bushels to come from? There is a good deal of Western sugar corn in the market being sold for pig food, and it is very poor pig food at that, because it is mouldy and dangerous to feed; its vitality not being equal to 10 per cent., much of the sugar corn sold for seed being such as under ordinary circumstances would not be used at all. Its vitality is low.

D. LANDRETH & SONS.
Philadelphia.

HOLLAND BULB PROSPECTS.—The outlook for the bulb crop is not brilliant. When the bulbs were first planted, we were suddenly overtaken by a severe frost which continued for about a week. Several fields were not yet covered with reeds, and after the frost had ceased the growers stated that acres and acres of narcissus, double Von Sion, Ajax princeps, and Poeticus ornatus were considerably damaged. Several lots of hyacinths are also said to be frozen. It seems to me that very many hyacinths have bad and too few roots.

Tulips' conditions cannot be judged yet. We only know there is a shortage of good red ones and therefore the prices of Vermillion Brilliant, La Belle Alliance, Artus, Verboom, Pottebakker scarlet, Prosperine, etc., will be advanced. On Saturday, February 21, we had a heavy storm here. The soil was dry and the sand and reeds were scat-

Mention the Florists' Exchange when writing.

---

tered everywhere. Lines of bulbs, half and whole beds of hyacinths and tulips, lay bare. There is much work to be done, and too few hands now to do it.

In the south of France the prospects of the bulb crop are very bad. Last week a syndicate of growers had a meeting at Toulon and concluded that the price of Roman hyacinths, 12-15 c.m., would be no less than $20.00 per 1,000, and that of narcissus Paper White grandiflora, 13 c.m. and over $5.00 per 1,000. Notwithstanding these prices, nobody felt inclined to sell J. B.

European Seed Notes.

With very favorable weather still continuing trade is generally very brisk, and the wholesale seedsman is having a difficult time endeavoring to fulfill the requirements for many varieties of seeds, whose yield this year has been so much under the average.

Red clover seed of all kinds keeps exceedingly strong and is at present rather scarce. The consignments of American and Canadian seed to this country being comparatively small this year, has made a considerable increase in the value of the insignificant quantities to be found in our market. Buyers of trefoil are lying low, in the hope that the present excessive prices, brought about by speculative operations, may fall. Alsyke is very dull, but white clover is specially strong. Rye grases, sainfoin, timothy, cocksfoot and lucerne maintain full prices, and Spring tares are moving more readily now at better values.

Practically the last shipments to your side have now been made, and the European seedsman is enjoying a very brisk time at home. The weather continues mild, February having established a record for bright sunshine and generally good growing weather.

The effect on all vegetable life is very remarkable, everything being many weeks ahead of the usual time. Of cabbage being grown for seed, the early varieties are so far undamaged, and continue to run freely, and the later sorts present á far better appearthan had been expected. One can hardly believe, however, that we shall escape without some very hard frosts during March, and the results will doubtless lead to shortages on many crops.

In England the exceptional weather has induced large numbers of growers to sow their earlier varieties of wrinkled peas, which means running the risk of losing all should colder times follow.

Grafting.

It is not too late to cut cions for rafting where some of this work is ontemplated this Spring. It is not so nuch in mind just now the grafting f thousands of seedlings such as nurerymen do, but rather the making of valuable tree of one that is worthss now, which change can be brought bout by grafting. On many a place is ome hedge row tree, or some cultiated one, which is not valued and hich by grafting would be transormed into one of merit. As an ilustration of what I mean, right before ne, in view from my window, is a oung apple tree, sprung up close to he fence. It is about six feet in height nd will be of no use in its present poition. It is on the list to be grafted ext month, and with Bechtel's flowring crab. Then next Autumn, or the Spring following, it will be dug up and noved to a position where the beauty f this crab may be admired.

When grafting or budding such trees s this, it is better to insert the graft, r bud, well down near where the hoots start, not on their tops. The pple spoken of has four shoots springng out at about four feet from the round. These will be cut back to bout three inches, and the cions inerted in them. This gives vigorous rowth from near the main stem, reulting in a well-shaped tree, and dong away with the chance of buds of he old kind starting out to mix with hose of the new ones.

Cut the wood for grafting now, bury t in a cool place, and graft when the uds of the apple commence to swell.

Pushing Nursery Work.

The extremely mild weather of the rst week of March has caused nurerymen to bestir themselves in the natter of planting out stock. Not so nuch can be done in the way of shiping, except in the case of southern rders, because of the uncertainty of hat is in store in the coming weeks f March. The nurseryman's own lanting is a matter of great imporance to him. Too often he has to let is planting go and give attention to he shipping of orders. He is both ise and fortunate who can do both, iz.: plant his own stock and give roper attention to his customers' orers. This is something that should e done, however, and by planning head it is quite possible to accomplish t.

Passing through a nursery in the last eek of February, I noticed that large locks of ground had been freshly lowed; and this, the first week in larch, these blocks are being filled ith trees. These trees will now make good growth this year; but had the lanting been deferred until the buds ere about to burst, they would no nore than hold their own for the first ear.

Have everything that relates to lanting planned at once; regulate the ork that there shall be a certain umber of hands employed at this opration from the commencement of the eason, and your profits will be satisactory at the close of the year.

Early Planting of Evergreens.

Because evergreens may be planted ater than deciduous trees, it has come o be considered by many that these rees are better planted late. In my xperience this is a mistake. No mater whether evergreen or deciduous, he earlier the tree is in the position t is to occupy, the better will it do. t gives a chance for the soil to settle round the roots, which is everything n the successful removal of such subects. In Europe, in the parts where Vinters permit, transplanting of all inds is concluded before the starting f the buds, and their plantings conist mainly of evergreens.

Vines for Dead Trees.

Where trees are of large size, some of the stronger growing vines, such as the grape, trumpet vine, or wistaria are the best, though the Virginia creeper should not be omitted, for its beautiful Fall colors are well worth considering, to say nothing of its graceful festooning of branches. In the case of many vines, notably the wistaria, it does not follow that they must be self-climbing, as the term is understood. Once let the wistaria get to where branches are, and it will twine around them in such a close embrace that it requires skill to remove it. It but needs support until the branches are reached, when it will find its way to the top.

Blue Hydrangeas.

I have received the following communication from W. F. Jeffrey, Bellmore, L. I.:

Among your very instructive articles in The Florists' Exchange I noticed one on blue hydrangeas, ending with the question: "Can any of our readers say why they are blue?" That is often asked here on Long Island and no entirely satisfactory answers have been given. One would say iron filings would do it; and then another would say they had tried that, and it made no difference. The most reasonable theory, and the one nearest the truth as far as my observation goes, is the one told me by an intelligent old lady friend, who says she thinks it is caused by the freezing of the dormant flower buds when exposed outside just frozen hard enough to change the color, but not spoil the bloom.

Thanking you for the many good points I have learned from your writings.

Our friend has our thanks for his kind commendation of the articles in the Nursery Department, as well as for his observations on the blue hydrangea question. But in view of the fact that indoor plants of the hydrangea will sometimes come blue, the lady's theory will hardly stand. I have in mind a lady who has two large plants in tubs, which are kept in a cellar all Winter. One of these produces flowers as blue as blue can be, the other not. Both are treated alike and, so far as known, the soil is the same in both tubs.

JOSEPH MEEHAN.

The Hon. N. H. Albaugh has been elected president of the Montgomery County (O.) Horticultural Society, to fill the vacancy caused by the death of Nicholas Ohmer. F. W. Ritter, of Dayton, is vice-president.

The Hotel Cadillac will be headquarters of the American Association of Nurserymen at the annual convention to be held in Detroit, Mich., June 10-12 next. Secretary Seager, Wilson J. Peters and J. Horace McFarland are the members of the committee on program, which will, as usual, be an interesting and instructive one.

Express Rates.

Last December, while the florist was struggling hard to obtain coal to keep his greenhouses warm, the express companies added materially to his misfortune by raising the rates for the conveyance of cut flowers. The express people had no plausible reason for advancing the rates; at least, they did not give any when asked; but now that the old rate has been restored it appears to us that the express tariff regulator is a very far-seeing mortal, and that there was method in his madness.

It no doubt became evident to said tariff regulator last Fall that the quantity of flowers being shipped was much less than usual; and, upon investigating the matter, he learned that the florists were unable to get a sufficient supply of coal, hence the reduced crops of flowers. Then, with much wisdom and forethought, it was decided that, as the Winter shipments of flowers were likely to be reduced on account of the lessened coal supply, the earnings of the express companies from that source would be curtailed also; and in order to avoid such an unusual condition of affairs, the cost of carrying was increased enough, so that even if the amount of business done should be much less than in other years, the earnings of the express companies would be the same, or better. Now that the florist is no longer so dependent on the coal, and his shipments will reach the normal, the companies are willing to carry his stock at the old figure. At least, that is what we may infer from the lowering of the rates at this time. For all of which we are truly thankful.

News of the Week.

The New York Market Florists' Association held a meeting on Tuesday evening last, in the rooms, corner Canal and West streets, to see what could be done about a market for the coming Spring. H. B. Daly was elected secretary of the association. As the old Clinton market is considered uninhabitable, efforts are making toward finding more suitable quarters. Tompkins Market, near Cooper Union, was reported as too small for the purpose, and another meeting is to be held during the coming week to further discuss the question. The date of the next meeting has not yet been fixed.

William Elliott & Sons opened their Spring auction sales on Tuesday, under most favorable circumstances. Usually the first sales of the season are but sparsely attended, but this year there was a fair attendance, and among them were many bidders. The stock offered consisted chiefly of imported roses, rhododendrons, decorative nursery stock and bulbs and roots. The Friday following another sale of similar material was held, and from now on to the close of the season two sales a week will be the order.

Eugene Dailledouze is on an eastern trip, looking over the carnation industry, and incidentally having a peep at some of the new varieties in that section of the country.

George Cook, the landscape gardener, is back from Europe, where he had been spending a few months.

H. B. McKnight will have charge of the plant department in the store of Simpson, Crawford & Co., Twentieth street and Sixth avenue.

R. O'Mara had the misfortune to sprain his foot on Monday, and, as a consequence, is still confined to his home.

The business of Kohl & Soutendam, formerly caried on at 1221 Third avenue, Brooklyn, N. Y., will now be conducted by Mr. Soutendam—Mr. Kohl having withdrawn from the firm—at 1235 Third avenue.

E. Sanders, who has been in the employ of J. H. Small & Sons for several months, has returned to his home in St. Louis. Mr. Sanders came to the metropolis to gain some experience in New York's floral methods, and feels that he has been well repaid by doing so. He speaks with great praise of J. H. Small & Sons' stores, and of the generous treatment and the opportunities offered for gaining the knowledge he sought.

M. A. Hart has opened a retail store at Eighty-second street and Lexington avenue.

Visitors in town this week included C. Scrim, Ottawa, Canada; A. W. Smith, Pittsburg, Pa., and Leonard Vaughan, Ithaca, N. Y.

Philadelphia.

Express Rates

Much gratification is felt this week over the express companies reducing the rate on cut flowers. The change was made on the 10th inst., the extra rate having been in effect just three months.

There is a fair amount of work going on among the retail stores, but such large quantities of flowers are arriving that the market is in poor shape. S. S. Pennock last week received over 300,000 violets, and was fortunate enough to have an order on file for 5,000 doubles daily at a good price. He also filled an order for 400 long-stemmed American Beauty roses on Monday last.

Eugene Bernheimer filled an order for 10,000 single violets a few days ago.

The building boom is still increasing. E. A. Stroud, of Overbrook, Pa., has purchased a tract of land at Strafford, Pa., and will build three houses for carnations, each house to be 30x300 feet.

Don't forget the combined exhibition of the Pennsylvania Horticultural Society and the American Rose Society on the 24th, 25th and 26th inst. Several entries have already been received.

DAVID RUST.

Louisville, Ky.

News Notes.

W. J. Schulz, son of Jacob Schulz, who for some time has been with Walker & McLean, Youngstown, O., returned home Saturday seriously ill with typhoid fever. Fred L. Schulz, a brother, who is also employed by the same firm, returned with him.

Herbert Walker, of F. Walker & Co., and Mr. Wm. Mann, who have been indisposed for some time, are again attending to business regularly.

The Kentucky Society of Florists held its March meeting at the store of Jacob Schulz. Only routine business was transacted. A suggestion from the State Vice-President of the S. A. F. that the Kentucky Society, as a body, take some action regarding the exorbitant express rates, was not acted upon, some of the growers even saying that the rates that especially hurt the retailers would be for their (the growers) benefit. Only a little more American push is needed by them.

A. R. B.

Springfield, Mass.

The Hampden County Horticultural Society held its annual meeting March 10 in W. F. Gale's office in City Hall, and re-elected the old board of offices as follows: President, Jacob C. Lutz; first vice-president, Adolph Miellez; second vice-president, Joel H. Hendrick; third vice-president, Louis D. Robinson; treasurer, J. Stuart Kirkham; secretary, William F. Gale. The Massachusetts Forestry Association will meet in this city April 8, holding morning and afternoon sessions in the Art Museum building. It is expected that over 100 delegates will be present from all parts of the State. One of the features of the program will be a demonstration of practical spraying of trees by City Forester Gale.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, ready for delivery in March, 75c. each. $7.50 per Dozen; $50.00 per 100. Stock limited.

GREAT REDUCTION

To reduce surplus **25 per cent. Discount** off the prices in the following list of **CANNAS. This offer good for a short time only.**

CARNATIONS ROOTED CUTTINGS

NOVELTIES—This Year's Introductions

Mrs. Theodore Roosevelt. A brilliant shade of deep cerise pink, flamed with carmine. Finely formed, average 3 inch flower on strong stiff stems. Habit vigorous, early, free. Fragrance, strong clove. Selected, strong, well-rooted cuttings now ready. $12.00 per 100; $100.00 per 1000.

Alpine Glow. A deep salmon pink on opening, which finishes a bright Daybreak tint. Good sized bloom, averaging 2¾ inches at this season of the year. Flowers of great substance and a splendid keeper and shipper. An extra vigorous grower; early, profuse and continuous bloomer. Cuttings taken last April produce plants carrying 25 to 30 blooms by the first of March. We believe this will prove one of the most profitable of the daybreak colored carnations. We shall have the following rooted cuttings ready for delivery at the dates specified: March 15th, 2,500; March 21st, 5,000; April 5th, 5,000. Price, $8.00 per 100; $75.00 per 1000. Quantity limited to the above.

Lillian Pond 2,000 selected plants from 2 inch pots, ready for immediate delivery, $10.00 per 100.

Her Majesty From 2 inch pots, March 10th to 15th delivery, $10.00 per 100.

Marshall Field From 2 inch pots, March 10th to 15th delivery, $12.00 per 100.

Gov. Lowndes Strong plants from 2 inch pots, for immediate delivery. $12.00 per 100.

Adonis Strong plants from pots, March 10 to 15th delivery. $15.00 per 100.

Enchantress From 2 inch pots, March 10th to 15th delivery, $12.00 per 100.

INTRODUCTIONS 1902

Harry Fenn. Extra strong selected stock, $50.00 per 1000.

Viola Allen. Fine strong cuttings for immediate delivery, $50.00 per 1000.

Stella. $6.00 per 100; $50.00 per 1000.

Challenger. Extra strong stock ready for immediate delivery, $5.00 per 100; $40.00 per 1000.

Gaiety. $6 00 per 100; $50.00 per 1000.

J. H. Manley. We have propagated a few thousand extra selected cuttings from this variety which we offer at $6.00 per 100; $50.00 per 1000, to those who wish to give it a trial.

STANDARD VARIETIES

Mrs. Lawson. 5,000 fine strong cuttings for immediate delivery, ready now and up to March 10th, $25.00 per 1000.

Golden Beauty. For immediate delivery, $50.00 per 1000.

Lorna. $25.00 per 1000.

Prosperity. Fine stock from 2 inch pots, $3.50 per 100; strong cuttings from sand, $25.00 per 1000.

Floriana. Fine stock from 2 inch pots, $3.00 per 100; strong cuttings from sand, $25.00 per 1000.

American Rose Society.

The following special prize for the forthcoming exhibition, is offered by Benjamin Dorrance, Dorranceton, Pa.

For the best collection of rose blooms grown outside a radius of 150 miles of Philadelphia, as measured by railroad distance, not less than five varieties and not less than 25 blooms of a kind: silver cup, value $50.

THIS WEEK'S SUPPLEMENT.

Acer Polymorphum Dissectum Atropurpureum.

Blood Leaved, Dissected Japanese Maple.

Among the numerous varieties of Japanese maples now familiar to lovers of trees, there are a few more often planted than others; and well to the front in the list is the one our illustration represents, the Acer polymorphum dissectum atropurpureum, the blood-leaved dissectum, as it is so often called. There is a green-leaved dissectum, also a valuable kind, which renders it necessary to add atropurpureum to this one, making an already lengthy name still longer.

The two dissectums spoken of are looked on as varieties of polymorphum, yet have a drooping habit of growth, which, though most pleasing, is very different from the quite upright growth of the latter sort. The illustration faithfully shows the character. Were a common A. polymorphum growing near it, or polymorphum atropurpureum—for it, too, does not droop—the drooping habit of the plant pictured would be more clearly shown.

It has been suggested that, as its propagation is mainly by layers, or grafting, calling for the use of side shoots to a great extent, this may have something to do with its lack of erect growth, but this is not the case; as A. polymorphum atropurpureum and many other varieties, when raised in the same way, maintain their upright character. Still, it may be admitted in passing that propagation from side shoots in the case of some plants does result in a less upright growth than normal.

The red foliage of this maple is particularly pleasing in early Spring and Summer. Though almost as blood-red as the common blood-leaved one, it does not appear so, because its finely divided leaves present less quantity of surface; but it is beautiful always, and most desirable.

Almost all Japanese maples display some tenderness of foliage under our hot, dry Summer sun, but it does not materially injure them. The many green varieties are rather the better for being slightly in the shade at noon, but those having colored foliage must have the full sunlight to bring out the bright tints. In shade, the blood-leaved ones become as the green ones are, losing their color.

This and other Japanese maples of the same class become but large shrubs with us. The illustration represents a specimen in Fairmount Park, Philadelphia, which, we believe, has been growing there for 25 years. The common, blood-leaved one, A. polymorphum atropurpureum, would make twice the height in that time; still it does not attain tree size.

There is no other shrub growing just as this maple does; and as nurserymen are now fairly well stocked with it, increasing it by layering and by grafting, this permits of its use in many places which it would help to beautify.

JOSEPH MEEHAN.

To Make Hydrangea Flowers Blue.

Editor Florists' Exchange:

If hydrangeas are grown in a tolerably strong maiden loam which contains a portion of oxide of iron, the flowers will come blue without further trouble; but the plants will require to be potted into this said compost and continually grown in the same from the cutting pot. Watering with a solution of alum for some time previous to flowering will benefit them greatly. The solution may be made by mixing at the rate of one ounce of alum to a gallon of rain water.

Plants should be struck from cuttings of the soft wood from February to May that are required to bloom in those months the following year. It is advisable to flower them in 7-inch pots, allowing the plants to produce one cluster of flowers, removing side shoots to strike, as the old plants are not to be depended upon to produce blue flowers the second year. F. J.

Long Island.

The Old Express Rates Restored.

The announcement has been promulgated by the express companies that the old rates charged for the conveyance of cut flowers previous to December 10, 1902, have been restored, the change taking effect on Tuesday, March 10, 1903.

It is safe to say that the express companies, by advancing the rates, have lost considerable traffic, consequently money, and that fact has brought them to the decision that their unwarranted action in raising the rates was an unwise and profitless one. On the other hand, the florist trade has in the meantime been kept in a state of perturbation, and the business crippled to quite an extent. The action of the companies has, under the circumstances, been a losing one for all parties interested; and it is to be hoped that wiser counsel will prevail should any future similar attempt to advance rates be made.

The lesson learned and contingent on this matter has been a salutary one for both sides. It has been demonstrated that no common carrier, however strong, can trespass on the rights of a legitimate industry with impunity, on the one hand; and, on the other, that concentrated and general agitation on the part of those injured will accomplish much. It is unquestionably the fact that the general uprising throughout the country against what was clearly an injustice, backed by the efforts of the S. A. F., has been instrumental in bringing about the restoration of the old rates; and that in spite of pessimistic views held to the contrary.

The victory gained has placed the florist industry in a position where its rights as a commercial factor in the country cannot be ignored, and has once more shown that the national society can, when occasion arises, render invaluable service to those whose interests it is established to promote. Thereby, and on that account, does the S. A. F. merit, and should assuredly receive, the united support of everyone engaged in this business.

John N. May, chairman of the S. A. F. Legislative Committee, writes on the subject as follows.

Editor Florists' Exchange:

We have just been notified by the express company here that the rate for cut flowers, from March 10, will be one general rate instead of one and one-half rate, which has been in force since early last December. We have made every effort to get the express companies to reduce the rate to the original, i. e., forty cents per hundred in this section; but they will not reduce it below fifty cents per one hundred pounds.

We are not advised if this rate is general, i. e., one general rate in place of one and one-half, with all the companies throughout the country, or only with the United States Express, but presume the same pro rate will affect all alike.

Our main factor in getting this reduction has been the fact that all the florists in Summit and Chatham have been sending their products to New York by a local express company. This, of course, meant quite a loss in money to the United States Express Company. In addition to this, our people have made strong protests repeatedly.

We hope this will benefit every florist in the country.

Peat as Fuel.

Editor Florists' Exchange:

You will see by enclosed clippings that our citizens are thoroughly alive to the possibilities of peat as a fuel, and, undoubtedly, in the near future it will enter into competition successfully with coal. This should be good news for florists, as I understand that peat burns to a clear ash, without dirt or clinkers. I would also expect these ashes to have some small value as a fertilizer.

SAMUEL BATSON.

[The clippings inclosed by Mr. Batson refer to a successful test of peat briquettes furnished by the American Peat Company, of Capac, Mich., whose plant, it is stated, will be turning out its full capacity of 200 tons daily in a very short time.—Ed.]

Peony Registration.

The Secretary of the S. A. F. notifies us that the list of herbaceous and tree peonies, previously sent to this office, (but not published) by the "Secretary S. A. F. Peony Association," has been submitted by the same firm to the Department of Plant Registration of the S. A. F. He adds: "The above list which comes through the medium of the 'S. A. F. Peony Association' is now registered provisionally. Because of the confusion existing in peony nomenclature, final registration will be held in abeyance until March 23. Meantime, parties knowing specifically of previous dissemination in America of any of the varieties herewith enumerated, under American names other than those here given, or making any claims of priority in connection therewith, are requested to address this office with fullest particulars obtainable on or before above-mentioned date. To facilitate identification, the Japanese names with translations are given."

Nine days is a very short time in which to straighten out the "confusion existing in peony nomenclature," entitling the list to "final registration," especially in view of the fact, that the same list of peonies has been distributed all over America and Europe.

The list furnished for registration is by no means a new one, the varieties enumerated having been in commerce for years. We submit that any registration with "The Department of Plant Registration," of the S. A. F., provisional or otherwise, of a list of established varieties of any plant is outwith the province and intent of that department. We refer our readers to the Constitution and By-Laws of the Society of American Florists, as these appear in the published proceedings of the Society for 1901 (p. 153), and still operative. In Section 3, relating to the "Duties of Officers," clause (c) specifies among those appertaining to the office of Secretary: "He shall keep a registration book, in which shall be recorded names and descriptions of new varieties of plants, under the rules of the Society," and so forth. This is the only power conferred on the Secretary by the Society relative to Plant Registration.

The names of the peonies submitted for registration, "provisionally," not being new, we hold that no notice of them can be taken by the "Department of Plant Registration of the S. A. F."

The Conviviality of the Craft.

For the past two meetings the New York Florists' Club has been wrestling with the subject of what has facetiously come to be characterized as "the canteen"—that is, the furnishing of liquid refreshments at the club gatherings, finally deciding that the practice shall be continued. The matter was first sprung on the members after the reading of the report on the recent flower show held in Madison Square Garden, and was introduced with the view of retrenchment in the club's expenditures, having in mind the severe financial setback given by the exhibition referred to.

The various discussions ensuing were conducted in the most good-humored spirit, yet several points were brought out which seem to have a bearing on the good of clubs generally.

The trend of the debate clearly demonstrated that the social feature in the club must be catered to, for the reason that of all men the gardener is the most convivial creature in existence. And this social trait of his character finds its highest development when in the company of his confreres. He may, in his daily walks, meet a tradesman of "another denomination," and pass him by with the most polite greetings, but a fellow-craftsman, never. With the latter an adjournment must be made to the nearest corner.

It was pointed out by those who had paid close attention to the matter that, divested of this sociability-engendering element, the attendances at the meetings were reduced—not because the good things provided were available gratis, but on account of the greater fraternalism which these, present, created. Good cheer, on tap in the club room, also, it was said, prevented subsequent sessions in less congenial surroundings.

THE FLORISTS' EXCHANGE

Nos. 2, 4, 6, 8 DUANE STREET,

NEW YORK, March 14, 1903.

Mr. Advertiser,

Dear Sir: We take this opportunity of calling your attention to the 1903 Special Spring Trade Edition of The Florists' Exchange, which will be issued March 28.

This is "the" issue of the entire year, and is so looked upon by every person in the Trade. Announcements in the Special Spring Trade Editions of The Florists' Exchange bring results—this has been conclusively proven each year since the inception of the special numbers.

Your advertisement for this year's "Special" is therefore solicited, feeling assured you will be well pleased with the returns you are certain to receive from it.

There will be no increase in advertising rates, but on account of the extra size of the edition, it is requested that all "copy" be in our hands not later than Wednesday noon, March 25.

Trusting to see you represented in the Special Spring Trade Edition of March 28, and with best wishes, we are,

Yours very truly,

THE FLORISTS' EXCHANGE.

We presume this characteristic is evalent in human nature generally, d that being so, it is necessary to ter to it. "All work and no play," c., is as much applicable to the floris' club business as it is to any other; d that club will best conserve its terests which provides for the greatt expansion of the craftsmen's natal instincts—which are: first, work; cond, recreation.

One of the ardent enthusiasts in vor of the retention of the convivial pirit" was Brother Birnie, of Hoboa, N. J., who quoted Burns on the bject of the many admirable qualities herent in a drop of Scotch, as folws:

hou clears the head o' doited Lear;
hou cheers the heart o' drooping
Care;
hou strings the nerves o' Labor sair
At's weary toil;
hou even brightens dark Despair,
Wi' gloomy smile."

A factor fraught with so many adntages to humankind is surely worv of consideration as an accompanient of a gathering of florists, into hose lives and meetings each one of e aforesaid adverse elements enters, at find their antidote in the remedy escribed.

Obituary

Edward J. Sheppard.

Edward J. Sheppard, florist, of owell, Mass., died Monday, March 9. e was born in England in 1824, and me to this country in 1846. He was member of Merrimac Lodge and annalancit Encampment, I. O. O. F.

John M. Underwood.

Mr. John M. Underwood died Wednesay morning, March 4, at his home in olumbus, O., after an illness from ropsy dating since last December.

Mr. Underwood was in his 84th year t the time of death, and had been a resident of the city continuously for the past 38 years. He was born in Dublin, Ireland, and came to the United States about 50 years ago. He settled in Cincinnati, where he followed the profession of florist. He then went to Columbus and settled on the East Side, where he had lived ever since. With his sons he conducted a florist's establishment on Fair avenue, and was widely known throughout the State.

A widow and six children survive him.

Mr. Underwood was a Mason, an Odd Fellow, a member of the old Division No. 1, Uniformed Rank, Knights of Pythias, and a Red Man. He was also a faithful attendant up to the time of his serious illness of Trinity Episcopal Church.

Benjamin Grey.

Benjamin Grey, the well-known florist, nymphæa and orchid grower, died at his late residence, No. 382 Eastern avenue, Malden, Mass., the result of a paralytic stroke, March 5, aged 56 years, 6 months, 26 days, and was buried Sunday, March 8.

The deceased was born at Ayton, Yorkshire, England, August 7, 1846; he came to America at the age of 7 years with his parents, who settled near Dubuque, Ia., shortly afterward coming East to Farmington, Conn., and later he with his parents moved to Albany, N. Y., where his father, the late William Grey, was up to the time of his death superintendent of the estate of Hon. Erastus Corning, the owner of one of the best-known orchid and general plant collections in the country. Here Benjamin Grey learned his profession.

At an early age, at the breaking out of the rebellion, he enlisted and served in the Army of the Gulf and that of the Potomac, under Burnside, Hancock and others. He enlisted in the 177th New York Volunteers and 123d Independent Battery, which was later transferred to the 8th Artillery. During his career he was present in several noted battles, among those of Cold Harbor, Port Hudson, Spottsylvania, Fall of Richmond, Lee's surrender and Antietam.

Returning home, he engaged in his favorite occupation and after working at private gardening for several years, part of which time he spent in the employ of Edward S. Rand, Esq., Dedham, Mass., owner of a noted orchid collection, he entered the florist's business, in which profession he remained to the time of his death, the greater part of which time he had lived in Malden, Mass.

Mr. Grey is survived by his wife, Harriet O. Grey, and three daughters, Dorothy, Harriet and Grace. He was a member of the S. A. F. and A. M. Lodge at Valatie, N. Y.

Firms Who Are Building.

JACKSON, MICH.—Eli Cross, the violet grower, is building a new greenhouse.

KENTON, O.—Salansky & Son will add another house, 128x25 feet, to their establishment.

BELLEFONTAINE, O.—Poole & Purllant are building a new house 100 ft. 4 in. by 16 ft. 6 in.; also a new boiler pit, and will install a new boiler of 20 horse power.

BERNARDSTON, MASS. — George Lamphear is building a new greenhouse here.

CHESTER, PA.—Albert Austin is preparing to erect three new greenhouses, each 16 x 50 feet.

CARNATIONS

March Propagation.

There is no doubt in my mind that the best months in which to propagate carnations are January and February. But, in many instances, the 1st of March comes, the tally shows a shortage in stock of many varieties, and as a result a large number of carnation cuttings go into the bench despite the lateness. I have noticed a few points in regard to propagation during March which may be opportune, and which I wish to call to the notice of my readers.

With the coming of longer days, and a stronger sun, we find that cuttings are best taken from the plants during the first part of the day, if the day be bright, for the bright sun, especially after a dark day, renders the cuttings very soft; and when in this condition they are apt to wilt, and we all know what a wilted cutting means. They should be sprinkled, and then trimmed in a cool, shady place. This, you will say, is true at any time; but it is, however, especially true as late in the season as this. More shading in the propagating bench is required and more sprinkling. There is also more danger from a draught than during the Winter months, for, to prevent the temperature of the propagating house from running up more and more, air is necessary; and a draught is liable to be the outcome, which will be very damaging to newly struck cuttings. Better let them run a little warm than risk an excess of air with the destruction which usually accompanies it.

Will a cutting taken during March make as good a plant, in time for benching, as an earlier one? Perhaps not; but there are a few points to be considered. When taken from the bench the plants should be potted off into 2-inch pots and given all possible encouragement, and should be kept in pots until well rooted before planting into the field. This is contrary to the theory that the sooner in the field after the ground is ready the better; but I believe that a plant will be benefited by the delay, and will take hold better in the field than one which is but poorly rooted in the pot. These late cuttings do not make as large plants, and can therefore be planted closer in the houses; and from some samples I have seen I do not believe large plants are a requisite for high-grade blooms. I merely quote the example of Mr. Warburton's Cressbrook, which he exhibited at Brooklyn, and which came from cuttings taken during the month of May. I do not wish to be understood as favoring late propagation, but merely to bring before you a few redeeming features of the case; and where one has a small stock of a choice variety and wishes to increase it all that is possible, it is well to overlook the date for some weeks to come.

The Care of Young Stock.

The subject is old and I have very little new to add; but I wish to call to your attention the requisites of health—plenty of light and air with a proper supply of moisture. Almost any place that is not too warm will do for young stock, and, above all things, it should be kept in a healthy growing condition. To have a cutting, or rather young plant, become pot-bound and, as a result, hard and almost dormant, is to subject it to a check from which it will take a long time to recover. To pull out the top of a cutting is also detrimental, as water lodges there and causes disease and decay. Top the plants only when well rooted and commencing to run up; not just before nor just after a shift; and make a clean cut between the joints with a sharp knife. Look over the young stock and cut off diseased or rusty foliage, and, if kept growing, good healthy stock will be the result.

Further Notes on Varieties.

No one can consider all the varieties in an article of this kind; and no one can grow all that the introducers recommend. In fact, no one grower wants them all; but the past Winter has brought out some good points in some and shown the weaknesses of others.

On the list for next year stands, first of all, Mrs. Thomas W. Lawson, and we hear of very few who cannot do it well. And it deserves its widespread popularity, for it is a great producer and the quality is nearly always all that could be desired.

Queen Louise, with us, comes second, and the call for stock has shown that it will be widely grown the coming year. Governor Wolcott and Norway, for a pair of fancy whites, make a good combination. Lorna is not their equal here in the East, although it has been very fine of late. The Marquis and Floriana! It is hard to make a choice, and we shall continue both another season and until we can pick the winner.

In scarlet, G. H. Crane is still good, but we all know its weakness; while Estelle, though better in color, is for the most part short-stemmed; but these varieties will both retain a place for the coming year; and Adonis will be given a chance to live up to its reputation.

Two of our best commercial varieties are Genevieve Lord and Morning Glory. These, with General Maceo, will be planted heavily. Governor Roosevelt has proven its title to space, and has been with us, exceptionally clean from rust, although many growers have had to discard this variety on account of rust. Golden Beauty is paying its rent promptly, and is one of the best sellers we have, while Eldorado, though producing more bloom, has fallen off and shall be grown only in a limited number. Prosperity, from its record of last year, is an average producer, and is doing well this season. I understand that the New York market will see more Prosperity flowers the coming season than in the past, and it well deserves its place on the list.

Dorothy is one of the best producers, and when well grown the flowers are the equal of the much talked of Mrs. E. A. Nelson. It will be grown heavily, and will replace both the last-named variety, whose many faults are only too prominent, and Mrs. Frances Joost, whose race is run. Enquirer and Cressbrook will keep them company without regrets, for we have not learned to love them; but it is with genuine sorrow that Mrs. G. M. Bradt enters the retiring list. A brighter star is appearing; but a variegated carnation seems to meet with very little approval among the retailers.

Of the new ones, Enchantress, Adonis, Governor Lowndes, Lillian Pond, The Queen, and President McKinley will be given a trial, and, as always, "we hope." It is always "next year" with a florist.

W. R. PIERSON.

BRIEFS FOR BUSY FLORISTS.

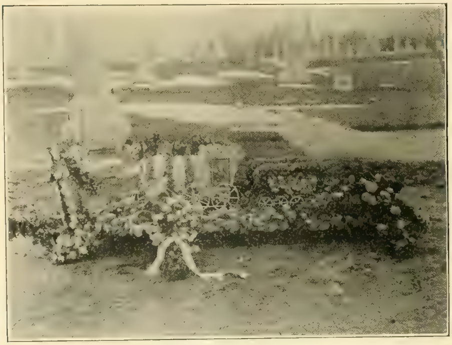
GERANIUMS.—Plants that were rooted last Fall should now be potted into the four-inch size pots. When potting this batch of geraniums there is no need to use soil that has been composted; leave that for plants that have to remain longer in pots than will the geraniums.

HYDRANGEAS.—If the cuttings have not yet been taken for next year's supply of plants, no time should be lost in getting them into the sand. While young stock can be raised at any time during the Spring and Summer, we must remember that it is only from the early rooted cuttings that we can have nice, bushy plants for the Spring of 1904.

PANSIES.—Well filled pans of pansies are always in good demand at Easter; and if selected plants are taken now and planted in suitable sized pans, then given a carnation house temperature, they will come in nicely for Easter business.

COLEUS.—The propagating of this useful bedding plant should be pushed for all it is worth from now on. There never seems to be too many of these plants, and it is a noticeable fact that the demand for a greater number of varieties is growing, though Golden Bedder and Verschaffeltii are the most desired.

PALMS.—There is always a fair demand for palms at Easter, and the getting together of suitable sized stock is in order at the present time. Medium-sized plants of kentias are about the best sellers, though the Areca lutescens is growing in popular favor again.



A LOCOMOTIVE IN FLOWERS

Artist—G. E. Hunt, Rutland, Vt.

A Floral Engine.

The accompanying illustration shows a floral locomotive made by G. E. Hunt, of Rutland, Vt., for the Brotherhood of Locomotive Engineers, sent to the funeral of one of their number, who was killed in the recent railroad wreck near Shelburne, Vt. The design was five feet in length, and was mounted on a track, placed on a platform seven feet long. The body of the engine was composed of carnations, violets, primulas, roses, and galax leaves. The tender and base were filled with roses, carnations, Cape flowers, narcissus, Roman hyacinths, dagger ferns, galax leaves and Asparagus Sprengeri. Fifty dollars was received by Mr. Hunt for the design; and the photographer sold 159 copies of the picture, realizing more money than the funeral piece cost.

QUESTION BOX

Poor Putty.

(61) The action of the soot would have no ill effects on the putty, if the latter is made of the right material We think the putty in question has been of a very cheap grade to have powdered so soon.

To Dye Carnations Green.

(62) We take the following formula from a German authority:

Eighteen grains alum, one quart of water, and enough malachite to give the mixture the desired shade of color Prepare the flowers by dipping them in water at a temperature of 68 degrees first putting in the water two grammes of tannin to the quart. Then dip the flowers in the dye, and do not dip them in clear water afterward.

Manure for Roses.

(63) G. A. C.—As the roses will make a very heavy growth for the next two or three months they will stand a good mulch of horse manure, if the manure is well rotted; or use the sheep manure and loam, mixed in equal proportions and put it on two or three inches thick

Before applying the mulch it would be a good idea to give a slight dusting of bone meal over the surface of the soil, then the meal will get into the soil quicker than if it were mixed with the mulching material. By good care during the Summer months the roses can be carried over easily for another year.

Use of Forced Bulbs.

(64) D. D. H.—The best thing to do with bulbs that have been forced is to throw them away; then when the season rolls around again buy a new stock Bulbs once forced are a long time in getting over it.

Callas for Easter.

(65) D. D. H.—Callas that are showing buds now should be just about right for Easter. No extra forcing at this time would bring flowers for Easter if the buds are not already in sight

Solid Beds vs. Benches for Rose Growing

(66) P. P.—For roses intended for Winter flowering, and where new stock is planted each year, there is no doubt that raised benches are preferable. For Summer blooming, or where it is intended to grow the stock two or more seasons, solid beds are probably the most satisfactory.

Ficus Plants Losing Their Leaves.

(68) Will you kindly give us some information about our rubber plants? They were from 2 to 4 feet high, and we cut off the tops to make the plants branch. In time they did so, but now we find the leaves below where they were cut are turning yellow and dropping off. We have had three or four do this so far, and, if possible, would like to know the cause of it. W. & N.

—The leaves of the rubber plants would probably have turned yellow and dropped off if the plants had not been cut back to make them branch. Rubbers, like any other plants, will commence to drop their leaves after a certain time, and there is no way of keeping the same set of leaves on a plant forever. If the plants were cut down during the Winter months, and while they were in a house not sufficiently hot enough to start them into growth right away, it is possible that the cutting back would hasten the falling of the lower leaves.

The Cohocton (N. Y.) annual sweet pea and floral exhibition will be held at the Presbyterian Church, August 11 and 12 next. Several leading trade firms contribute premiums, among them W. Atlee Burpee & Co., Henry A. Dreer, D. Landreth & Sons, John Lewis Childs, Arthur Cowee, Cushman Gladiolus Company, and W. A. Christy.

A Talk on Ferns.

By N. Butterbach before the Monmouth County (N. J.) Horticultural Society, March 6, 1903.

Considerable care is required in raising ferns from spores. A shallow pan should be used, half filled with broken pieces of pots, or, better still, with mortar from an old wall, and then filled within one-half inch from the top with fine sifted soil, which should be scalded with boiling water, and drained, before the spores are sown, so as to kill the germs of fungus or insects detrimental to the growth of young ferns. The spores should be scattered over the surface without covering them with soil. A pane of glass should be put over the pan, and the latter should be placed in a saucer of water, which will keep the soil sufficiently moist. Keep the pan well shaded until the spores are visible as minute plants.

The chances of getting new varieties by intermixing are not very great, but it is the only way to get any at all, except, perhaps, a chance seedling.

In selecting the spores care should be exercised to take them from that portion or form of the plant which is most desired. For instance, if a crested form is wanted, the spores of the crested part of the plant should be taken, and the certainty of getting crested seedlings is thereby much increased. The minute plants should be taken up in small patches and pricked off carefully, and when they are established and fit to be handled they should be divided and potted off singly.

Plants that have several crowns, or have creeping rhizomes, are easily increased by division. Some species produce small bulbs along, or at the end of, the frond. If those are removed and placed on soil they form plants.

A preparation of soil which suits almost all ferns is a mixture of two parts of good loam, one part of sharp sand and one part of leaf mold. The latter is indispensable in raising ferns to perfection. If the soil does not contain sufficient lime, a sprinkling of the same will be found very beneficial.

Repotting of ferns should not be overdone, as it is known that the most luxuriant growth is made when the inside surface of the pot is covered with a network of roots. Ferns like moisture, and the absence of water is shown by the shriveling of the old fronds.

In herbaceous plants, or plants with woody texture, the young growth wilts first. If the latter stock has been kept too dry the ball can be soaked and the plant will recover; but with ferns it is quite different, as this treatment has seldom any effect on them, with the exception of a few varieties. Repotting can be safely performed at any time of the year, but the best time in the stove house is in February, and in the cool house in March. In any case it is best to repot before the plants start to make young growth. The pots should be clean and dry, as in any other case the rootlets will stick to the sides of the pots; and if the plants require repotting again, they will suffer greatly, as it will be found impossible to remove them from the old pots without breaking a quantity of live roots. New pots will absorb a great quantity of water; therefore they should be soaked in water and dried again. As the first and second waterings would be absorbed by the pots, the balls will become dry, to the detriment of the plant. Although ferns need moisture at all times of the year, drainage is most important. In their natural state most of the ferns grow in partly decayed vegetable matter of a soft texture; therefore, they should be potted firm, but not hard.

Moisture, proper atmosphere and temperature are the most essential; the soil is only of secondary consideration. The ventilation should be managed so that the plants are not in a direct draught; but a close, stuffy atmosphere is more injurious than an excess of ventilation, and more so in the stove house.

A fern house should, whenever possible, be built from north to south, and the plants shaded from the strong rays of the sun, although retaining all the natural light possible. Blinds of unbleached muslin, fastened on the inside, under the roof of the house, we have found the best for this purpose.

One of the most useful, and a very old favorite fern is Adiantum cuneatum, or maidenhair fern. It is of easier culture than most any other fern, and adapts itself to almost any soil and situation. If it is kept moist at the roots it will produce the whole year around an abundance of fronds. It is generally raised from spores, but can be easily propagated by cultivation of the crowns.

A. cuneatum gracillimum is a variation of the above, and one of the most elegant ferns. The fronds attain a height of from 1½ to 2 feet, and are densely tufted. This variety is reproduced true from spores and is of very easy culture.

A. formosum is a strong, handsome greenhouse species, and attains large size. It is very useful for house decoration, and is also of easy culture. It succeeds well in a greenhouse temperature, but if cultivated in stove heat the fronds become much larger and the plant will make a fine specimen. It is raised from spores and by division of the rhizomes.

A. Ghiesbreghtii, or scutum, is supposed to be a variety of tenerum. It makes a beautiful plant for decorative and exhibition purposes.

A. peruvianum is one of the most ornamental stove species of the large growing adiantums. Its graceful fronds are borne on wiry, long stalks from 12 to 18 inches in length, the fronds from two to three feet.

A. tenerum is a stove species, of elegant habit and very large dimensions. It grows wild in Florida on the river banks, and its fronds are from two to three feet in length. If sufficient room is allowed it, this fern makes a grand exhibition specimen.

A. cuneatum grandiceps is highly decorative and robust. It has densely tufted crowns and the fronds are more elongated than in A. cuneatum. Its branches are smaller, and the fronds have an arching habit which makes it suitable for hanging baskets.

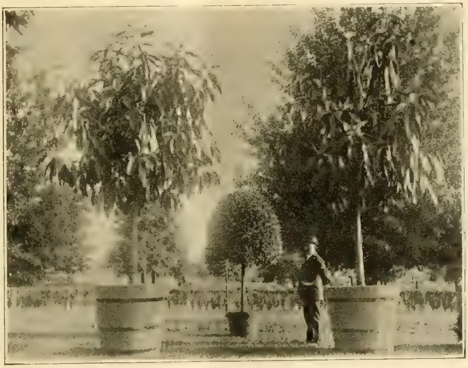
A. caudatum is a stove species, different from the majority of adiantums. It is a very useful fern for baskets, and if suspended, its fronds can be seen drooping two or three feet.

A. capillus-veneris imbricatum is the handsomest of the capillus-veneris varieties. The fronds are borne on slender stalks, pendulous, from eight to ten inches long. The appearance of this plant is that of A. Farleyense, but it is of dwarfer habit. It is classified as a cool house fern, but with us it does best with greenhouse treatment. Its graceful cut fronds are used for dinner table decorations, and the plant makes a first-class house fern.

A. Farleyense, undoubtedly the handsomest of all ferns, has attained such a degree of popularity that any description, however complete, would fail to do it justice. It is supposed to be a natural sport of A. tenerum; but whatever it may be, it shows admirably the gardener's skill, and draws attention wherever exhibited. Its fronds are gracefully drooping. I have seen plants grown at Florham Farms, Madison, N. J., with fronds 2½ to 3 feet in length, and the pinnules, or leaflets, 1½ inches broad; and they were grown entirely in pure fibrous loam. They require a temperature of from 70 to 75 degrees at night, and plenty of moisture. Attempts have been made to raise this fern from spores, but without success, consequently it is propagated by division of the crown.

A very useful fern for decoration, and a very good house plant, is Cibotium Schiedei. Although an arborescent fern, its trunk never attains a height of over two or three feet when artificially grown. It is of free growth and its fronds are elegantly drooping, measuring sometimes from six to eight feet.

In closing, I must not forget to say a good word for a genus of ferns which demands a space in every greenhouse, however small, viz., the nephrolepis. They are valuable as house plants, for rockwork, decorations and baskets. They are most tenacious of life, and will stand a treatment which no other fern would.



TWO MONSTER RUBBER TREES.

Courtesy of J. H. Troy, New Rochelle, N. Y.

New York Florists' Club.

The monthly meeting of the club was held in Civic Hall, 128 East 28th street, on Monday evening, March 9, 1903. President J. H. Troy in the chair.

The outing committee, through Vice-President Traendly, reported that they had engaged a boat, and also secured Witzel's Point Grove, for July 1. W. J. Elliott was on hand with the program of sports, which includes games both ancient and modern, for the delectation of both sexes; and incidentally bagged quite a number of prizes for the event, as well as contracts for advertising space in the program. President Troy headed the list with a donation of $25.00 to be given as premiums in the ladies' contests. It is hoped that the members will encourage the committee by patronizing the advertising columns of the program, so that the outing may again prove "self-supporting."

Secretary Young read the resolutions prepared on the death of the mother of Lawrence C. Hafner, which were ordered spread upon the minutes, and a copy sent to the bereaved family.

Mr. Sheridan made the gratifying announcement that he had been informed through Chairman John N. May of the Legislative Committee, that the express companies had restored the old rate on cut flowers, to go into effect Tuesday, March 10. Mr. Sheridan presumed that this satisfactory result had been brought about partly by the agitation on the subject throughout the country, and quite largely through the efforts of the S. A. F.'s committee. The information given was received with applause.

Owing to the sickness of two of its members, the report of the committee on the matter of the club's special premiums, to be competed for by its members only at the annual exhibition of the Chrysanthemum Society of America to be held in New York City next November, was laid over till the April meeting.

Treasurer Weathered read further payments to the Guarantee Fund, and reported that [illegible] Son, New York, had donated the prize money won by them at the late show to the fund. The club also voted an appropriation of $200.00 for the purpose of raising the Guarantee Fund to the amount necessary to liquidate all premiums, pending a reduction of the sum named through collection of moneys, still outstanding, from guarantors.

The Board of Trustees announced the selection of a new meeting room at the Grand Opera House Building, 23d street and Eighth avenue, a change of ownership of the present meeting place has necessitated its vacation by the club. The room chosen is said to be the best the club has yet occupied, being well suited to the purpose.

A letter was read from W. Wells, of Surrey, England, acknowledging receipt of the medal awarded him by the club for a display of cut flowers of chrysanthemums at the Madison Square Garden Show last Fall. The medal was delivered to Mr. Wells through the courtesy of Alfred Dimmock.

C. W. Ward, Cottage Gardens, Queens, N. Y., exhibited two very fine vases of carnations Mrs. President Roosevelt and Alpine Glow. The exhibition committee, Messrs. Donaldson, Herrington, and Duke, recommended a certificate of merit for both varieties, subject to the rules of the club.

Mr. O'Mara was again unable to be present to submit his motion relative to abolishing the "canteen," except on special occasions. The subject, however, was thoroughly discussed pro and con, and a motion was finally passed to the effect that the Entertainment Committee continue to furnish refreshments at each meeting, as usual, one or two members only dissenting.

Messrs. Weathered, Wallace, and Young were appointed a committee to draft resolutions on the accidental death of a son of Fred. Donahue, a member of the club.

L. V. Hallock and Leonard Vaughan, son of J. C. Vaughan, Chicago and New York, who were present, each made remarks. Mr. Vaughan, who is taking a course in horticulture at Cornell University, and who is in the city owing to the typhoid epidemic at Ithaca, gave an entertaining account of the methods of instruction pursued in the horticultural and agricultural departments of the college, which was listened to with much attention and greatly enjoyed by the members. Messrs. Rennie and Proctor, from Lenox, Mass., were also visitors at the meeting.

Monster Rubber Plants.

Our illustration shows two plants of Ficus elastica, imported for a customer by J. H. Troy, of New Rochelle, N. Y., president of the New York Florists' Club. The plants, after being received, were grown on for a year. At the time the photograph was taken each had attained a height of 18 feet, with a spread of 10 to 12 feet. They weighed in the aggregate 3,700 pounds net. Mr. Troy is seen standing near one of the specimens.

Have Convictions and Stick to Them.

Men who do things, who achieve results, have strong convictions; they believe something in particular, and believe it without reservation. A man who is willing to fight for an idea, to sacrifice everything in order to develop it, has something definite in his life, a specific certainty that will bring him out somewhere in the neighborhood of success.

A man without a policy, without a definite purpose, without a strong conviction of any kind, who believes a little of everything and not much of anything, who is willing upon pressure to relinquish his opinion on any subject, to abandon any idea he has conceived, whether it be feasible or not, who does not hold on to any one thing tenaciously, will never accomplish much in this world.—Success.

Canadian News

Canadian Horticultural Association.

At a meeting of the executive committee of the above Association held in Toronto, March 6, it was decided to hold the sixth annual convention (at Toronto) on Wednesday and Thursday, September 3 and 4. These dates are during the first week of the Industrial Exhibition, which is to be made a Dominion affair this year. Railway fares will be at their minimum rate, which will apply all over Canada and the neighboring States.

The trade exhibit will be held in one of the permanent buildings on the exhibition grounds of sufficiently ample proportions to display a large number of entries. Full particulars will be given at a later date.

There will be four sessions of the convention, three on the first day in the city and one on the second day on the exhibition grounds. The question box will be made a special feature this year, and those who have questions to ask are invited to do so in good time, so that the inquiries may be submitted to specialists to reply thereto. Four essays of special interest will be read.

A. H. EWING.

Woodstock, Ont.

Hamilton.

It looks like an early Spring. The heavy rains of the last few days have pretty well drawn out the frost. We will probably catch it later on, however, but such weather makes it easy to market cinerarias and other plants which are hard to handle.

There is a remarkable change for the better in the health of Easter lilies this year. I read some years ago that the British Government had sent a commissioner to Bermuda to improve the health of the lily crop. He must be getting in his work, for there will evidently be comparatively little loss this year from disease.

The following local men attended the Toronto carnation exhibition: A. E. Cole, Ed. Walker, E. J. Townsend, C. M. Webster and John Morgan.

Toronto Carnation Show.

Though the show was held in a smaller hall, I think the exhibition was of a higher order and commanded more attention than the last one. The attendance of the "wise men of the east" was good to see. Time was when no Canadian floral function would draw the craft more than a hundred miles from home.

There were some fine carnations exhibited. That Flamingo is a "bird" every one admitted when they saw it. It looked well to see a home-grown article win the silver cup for the best vase; of course, flowers grown locally had a big advantage over those that were shipped, and certainly from the point of tasteful arrangement and fresh appearance Dunlop's vase of Mrs. Lawson deserved the award.

The Visit to J. H. Dunlop's.

No doubt about it, a set and sufficient time for an executive meeting is a necessary thing, and the good shape in which business was done at the C. H. A. meeting will surely veto any more hurried or impromptu gatherings.

It was thoughtful of Mr. Dunlop to serve luncheon to his visitors, and it was especially acceptable to those that stayed to look through his place. One needs a substantial meal before starting on a trip through the place these days. Everything I saw bespoke an admirable system and close, thorough cultivation. A carnation exhibition is available any day at Mr. Dunlop's. I was particularly interested in the operation of rose-grafting; it has seemingly been reduced to the precision of a nickel-in-the-slot machine.

The Club Dinner.

This was an event which I should say every one enjoyed. Too bad some more of the Hamilton boys did not see their way to stay.

After the good things had been disposed of a lengthy toast list was begun. This, I think, was the most interesting part of my brief holiday—at any rate, I missed my train without complaint in order to hear the conclusion. The Toronto aldermen made the table decorations do their drill over and over; they served the purpose of illustrating many remarks. The decorations were good, though, and I suppose the gentlemen should be excused for not recognizing the fact that they were only a meager sample of what Toronto could show. But to return to the toast list, it has never been my privilege to listen to as fine an expression of the attainments and ambitions of Canadian floriculture. S. S. Bain's spirited speeches would rouse the drowsiest to enthusiasm, and Tom Manton's speech, from his own little platform, certainly eclipsed all his former efforts. The toastmaster would not allow the boys to sing all Tom's praises—we just had to think them. The musical talent was excellent, and one cannot but remember in this connection the songs by Mr. Lawrence and Mr. Bain.

The Canadian Florist.

D. C. Nixon was on hand at the executive meeting and announced his intention of publishing a paper by the above name, to appear bi-monthly. Mr. Nixon's assurances that he had ample editorial and financial backing were regarded favorably by the meeting, and he announced that the next issue would be mailed on the 16th inst.

I wish "The Canadian Florist" long life and success.

F. G. Foster & Sons, florists, Charles street, have assigned, with liabilities about seven thousand dollars.

BEAVER.

Ottawa.

Toronto Recollections.

I have just returned from the meeting of the executive committee of the C. H. A. and the carnation show at Toronto. The committee made arrangements for the convention in September, which ensure its being the best ever held. All detail, of course, was left to the local committee, who are most enthusiastic and promise the greatest trade exhibit ever seen in Canada.

The meeting was held at J. H. Dunlop's place, and he more than maintained his reputation for hospitality by entertaining us at luncheon. Some thirty sat down. Another treat was a walk around his establishment, which, on the whole, is in fine condition.

A visit to Mr. Dunlop's is always instructive, for he most thoroughly and pleasantly explains everything on the place—shows the results of all his experiments, whether successful or not; roses from cuttings, grafts, roots, one-year-old, 2-year-old; in fact, everything connected with them. You can always see the latest in carnations, and learn from him the good and bad points in each.

In company with Messrs. Bain, Bennett and McKenna I went to Brampton, and there, if possible, got more roses and carnation lore than we well knew how to get away with. In looking over the new range of glass devoted to carnations, the first impression is that one is looking over a large field of grain—it seems so immense. The same may be said of the roses, then again of violets. Perhaps one of the most striking features was the large house full of carnation cuttings, striking and rooted, and looking magnificent. The stock generally was in good condition. Some carnations were, of course, off crop, but still, owing to the magnitude, one gets the impression that they never can be in short supply. The sight of the buildings pays any one for going a long journey, for if not the largest, I should say they were the most complete in every way on the continent.

Findley's place was also visited, and his violets were simply grand, in quantity and quality.

Mr. Jennings, of the same town, has a small place, but it is a picture, mosty in carnations—the best we saw on our trip, in full crop for Easter, not a bursted flower or a yellow leaf.

E.

Toronto.

The Annual Dinner.

The annual dinner of the Gardeners and Florists' Association was held at Webb's on Friday, the 6th, the night after the carnation show. About 75 members and their friends sat down to a fine spread. The table was handsomely decorated by E. Collins and H. G. Dillemuth. A splendid lot of Anthurium Scherzerianum, cypripediums and ferns were on the center of the table, and small palms, cypripediums, begonias, hyacinths and ferns on the ends, with some fine roses, carnations and tulips along the sides. The plants came mostly from the Horticultural Garden and John H. Dunlop; the cut flowers from Mr. Dunlop, the Dale Estate, and the Horticultural Garden. The room was well decorated with tall palms and other plants. Mr. Dunlop acted as toastmaster, a position which is generally filled by Park Commissioner Chambers, but unfortunately that gentleman is ill at present. I am pleased to say he is convalescing. The various toasts were responded to in a fitting manner. Among our visitors from a distance were Mr. Murray, of London, England, and Harry A. Bunyard, of New York.

Carnation Show.

The fifth annual carnation show of the Gardeners and Florists' Association was quite a success, although fewer new varieties were on display than in some former years. Standard kinds were well represented. The show was free to the public and was well patronized.

The challenge cup, won by E. G. Hill Co. last year, with Adonis, was captured this year by John H. Dunlop with a fine vase of Mrs. Lawson. Mr. Hill did not send a defender. The entries for the cup were the J. D. Thompson Carnation Company, Chicago, with Enchantress, a grand variety, which had suffered in transit and was not seen at its best. Weber & Sons, Oakland, Md., sent Governor Lowndes, also a fine variety. It opened up a little sleepy, but improved considerably later. S. J. Reuter, Westerly, entered Lillian Pond, a fine white, strong but rather short-stemmed. The flowers carried well, and were in good condition. Dorner & Sons Co. sent Stella, Apollo, and Sibyl; the latter is not large, but looks as if it were prolific; also Dorothy Whitney. The flowers traveled well. William Murphy sent his white variety, but it was not in a condition to be judged on arrival. The display of the Chicago Carnation Co. consisted of Mrs. Potter Palmer, Her Majesty, Marshall Field, and Harlowarden. The latter did not carry as well as the others.

L. E. Marquisee, of Syracuse, N. Y., exhibited Sunbird and Flamingo. I think the latter was the most admired variety among the new ones in the hall; it stood up well, and its color was very attractive. He also sent a few flowers of Albatross.

Ernest G. Asmus, West Hoboken, N. J., exhibited a vase of the new yellow rose, Franz Deegen; it was recommended for a certificate.

F. R. Pierson, Tarrytown, N. Y., had a specimen of his new fern, Nephrolepis Piersoni, which also was recommended for a certificate.

The winning of the challenge cup by Mrs. Lawson carnation again proves what a grand variety it is, for, although it had the advantage of being grown locally, the newer sorts in competition with it were very fine.

The roses, carnations and violets from The Dale Estate were in good shape. Mr. Dunlop's exhibit—carnations, roses, bulbous stock and plants—was much admired. Other exhibitors were: W. J. Lawrence, plants, cut roses and bulbous stock, a vase of Ivory being of special merit; Jay & Son, plants and bulbous stock, and Manton Bros., orchids.

The judges were Messrs. S. S. Bain, J. McKenna, and Joseph Bennett, of Montreal; and E. I. Mepsted, of Ottawa.

C. H. A. Executive.

The meeting of the executive committee of the C. H. A. was held at the Dunlop's greenhouses, March 6. Among those present were: Messrs. Bennett, of Montreal; Mepsted, Ottawa; Webster, Hamilton; Ewing, Woodstock, and Dunlop and Manton, of Toronto. Several of the members were also present, and assisted the committee in its deliberations.

It was decided to hold the convention during the first week of September next, on Wednesday, Thursday and Friday. Friday will be given up to pleasure. Not quite so many papers as last year will be read, but the Question Box will be made more interesting. It is expected the trade exhibit will be staged in the fruit building of the Industrial Exhibition. George Mills will be superintendent. The general arrangements connected with the convention are left in the hands of the local society. John H. Dunlop has undertaken to supervise the preparation of the program.

Mr. Nixon was sanctioned to use the association's name in connection with his paper, The Canadian Florist. It was understood that this privilege might be withdrawn at any future meeting. The gathering was very harmonious, and after adjournment the members were entertained by Mr. Dunlop at lunch, when a very pleasant time was spent. THOS. MANTON.

THE MARKET

OTTAWA. The snow is fast disappearing and the weather is fairly bright. Stock is looking well, but is not in supply equal to the demand. Carnations are somewhat off crop, always excepting Mrs. Lawson, which never seems to need a vacation. The sale of bulbous flowers continues good. Lily of the valley is good and plentiful, selling well.

In plants, the promise for an extra fine stock for Easter is bright. Easter being late, a great deal of thinking and moving around are required. Crimson Rambler roses look at present at if they had not been given time enough.

This week Parliament opens, which means a lively hustle in the provinces for flowers for the drawing room on Saturday, the floral feature of the season. The demand promises to be up to that of former years. E.

TORONTO. Business has improved a little. Roses still keep up well in price, but are getting more plentiful. Carnations are also in greater supply. Violets are cheap, but generally clean up pretty well; bulbous stock is very plentiful and cheap.

The Dutch army still keeps coming, and if Canada is not well stocked with bulbs next Winter it will not be the fault of the drummers.

The weather is warm and the snow is nearly all gone from this district; in many places the frost is out of the ground. In the city tulips and crocus are showing above ground, and there is every appearance of an early Spring T. M.

MARSHALLTOWN, IA.—O. E. Garlinghouse, a member of the seed firm of Garlinghouse & Wilson, is missing. He had no financial troubles and his accounts with his firm are all in good shape. It is thought by some that Mr. Garlinghouse may have met with foul play but his wife does not accept that solution. She says he had no enemies.

EASTER STOCK

Genistas, 3 in., good for Easter, 90 cts. per 10.
Primula obconica, 5 in., in bloom, $1.20 per 10.
Kentias, 4 in., good, 5 leaves, 3.50 per 10.
Phœnix Rec., 5 in., 5-6 leaves, $1.50 per 10.
Asparagus Plumosus, 3½ in., fine, $1.00 per 10.

Webster Bros., Plantsmen, Hamilton, Canada

NEW CROP FLORISTS' SEED

All the leading varieties for present sowing. We give you the largest trade packets going, and guarantee the seed fresh and of the highest quality. Our own specialties are well known **Aster, Cyclamen, Cineraria, Centaurea, Mignonette, Nasturtium, Pansy, Petunia, Stock,** and **Verbena.** Send at once for new Catalogue.

Chicago.

Among the Growers.

A visit to the establishment of John Lang, Melrose and Robey streets, found him busy preparing for the Spring plant business. He devotes his entire place, seven houses, to bedding plants, and finds a ready sale for his whole output at the greenhouses. This, he says, is more satisfactory than to employ a man to sell the plants from a wagon. When his customers come from any distance he hires an express wagon to make the deliveries for them. He has been in business at the same place for the past 16 years.

Jottings.

The express companies have at last listened to the appeals of the florists and have concluded to restore the old express rates after the 10th of this month. E. E. Pieser has been an energetic worker to get this rate and deserves the thanks of the florists in the vicinity of this market.

Wietor Bros. report the largest sales of carnation cuttings the present season of any since they started in business. They are also doing an immense shipping trade in cut flowers.

A look into the seed stores finds the early customers buying their first instalments of seeds; and if we have a few days of such nice weather the seed houses will be soon in the rush of Spring trade. Up to the present time it has been rather slow.

One wholesale house had an order on Friday for 45,000 carnations, 3,000 roses and 1,000 ferns, all from one firm. This order is to be duplicated, as near as possible, every Friday for the rest of the Spring.

The greenhouse construction men are running their mills to their full capacity trying to keep up with orders, and are also working nights and Sundays at office work. They say trade was never so brisk at this time of year as now.

The Chicago Flower Growers' Company is adding to its list of growers almost every week. Beginning with 12, that number has increased to 22. Every one seems satisfied with business. Vaughan's Seed Store is represented on the floor with samples of well-grown Boston ferns, palms, rubbers and a variety of miscellaneous stock, besides a full line of florists' supplies.

Visitors in town included: George W. Caldwell, president of Caldwell the Woodsman Company; Peter Fisher, Ellis, Mass.; A. N. Kinsman, Austin, Minn.; H. W. Peirce, Waltham, Mass.; B. Eschner, Philadelphia, Pa.; J. Niednagel, Evansville, Ind.; C. L. Brunson, Paducas, Ky., and J. L. Loosé, Alexandria, Va.

ROBERT JOHNSTONE.

KALAMAZOO, MICH.—The Central Michigan Nursery will remove its general offices from the Pratt Block to 304 West Main street about the last of March. A complete retail store for cut flowers, flowering plants and palms will be opened. The company will also carry a full line of bulbs and seeds of every description.

Asparagus Sprengeri

3 in., $5.00 per 100; 2 in., $2.50 per 100; $20.00 per 1000.

DEAN FERRIS, PEEKSKILL, N. Y.

Coal Didn't Bother Us!

We are Headquarters for

Easter Plants

Blooming Easter Week or Before.

I have an immense stock of the finest and choicest in Philadelphia, and in such quantities that exceed anything that I have ever offered before. Several new greenhouses have been added to our large establishment, and these, with many hot-beds, are devoted to the entire cultivation of Easter plants alone; therefore I will be prepared to fill all orders if sent in time as far as the supply will reach.

AZALEA INDICA.

Have two houses 20 x 100 feet full of these choicest and most favorite Easter plants. Most of my customers already know that I am agent for a large concern in Ghent (Belgium), O. Vanden Plas; therefore I can offer you plants at first hand and not through the middleman. In the interest of my customers I go there every year if possible and select my stock personally for the American market. **Notice:** My Azaleas as soon as they arrive from abroad are planted in pots and pinched out as often as it is necessary and taken care of all winter, while some florists place their plants in hot-beds or frames without pots until sold.

MME. VAN DER CRUYSSEN is a rare article this Easter, but as a novelty I can offer about 700 (6-in. pots) of the finest middle-sized plants of this variety, and these are the finest you ever laid your eyes on, as round as an apple, covered with buds. Price, 75c., $1.00, $1.25 each. Specimen plants, 10 and 11-in. pots, $4.00 and $5.00 each.

Other choice varieties in double white, we have Niobe, Bernhard Andreas alba and Deutsche Perle. In pink we have Simon Mardner, Dr. Moore, Memorier, D. L. Van Houtte, Paul Weber etc. In variegated we have Empress of India, Prof. Walters, Vervaeneana, and about eighteen more best varieties of all shades and colors, too much to mention. Price 6-in pots, 60c., 75c., 85c., $1.00 and $1.25 each. Specimens, 7-in. pots, $1.50 and $1.75 each.

AZALEA MOLLIS, a novelty when in bloom, 6-in pots, 60c and 75c.

SPIRÆA COMPACTA, 6-in. pots, $3.00 per dozen (my own importation, fine, bushy plants). Cineraria Hybrida (perfect jewels), all shades and colors, full of buds and flowers, 6-in. pots, $3.00 and $4.00 per dozen; smaller plants 5 and 6-in. pots, $2.00 and $2.50 per dozen.

DAISIES, white and yellow, 6-in. pots $3.00 per dozen.

LILIUM HARRISII. Have about 2500 of these (H. F. Michell's selected bulbs, 7 x 9, at $120 per 1000); height from 15 in to 36 in., 5 to 10 buds to the plant, at the rate of 10c. per bud. Lilies are scarce, other plants must accompany the order.

HYDRANGEA OTAKSA (pink). Have a large housefull in tip-top condition, better than ever; strong plants, 6 in. pots, $4.00, $5.00, $6.00 to $9.00 per dozen. Specimens, 7-in. pots, $1.00, $1.25 and $1.50 each (a few white ones at $3.00 per dozen).

BEGONIAS. Pres. Carnot, 5-in. pots, $2.00 per dozen; 6 in. pots, $3.00 per dozen.

BEGONIA Metallica, 6-in. pots, very large and bushy, $4.00 and $5.00 per dozen.

BEGONIA Vernon (dark red), a new variety from Switzerland, 6-in. pots, full of flowers, $3.00 per dozen.

BEGONIA Vernon (dark red), 4-in. pots, $1.50 per dozen.

BEGONIA, Mixed, 4-in. pots, $1.20 to $1.50 per dozen.

HYACINTHS, all named varieties, from first-sized bulbs of my own importation, all fine shades, $10.00 per 100.

TOURNESOL TULIPS (double red and yellow striped) best double Tulips in existence, sell at sight, three bulbs in a 4-in. pot, $1.50 per dozen pots.

DAFFODILS (Von Sion), double-nosed three bulbs in a 5 in. pot, unusually fine this year, $2.00 per dozen pots.

Mr. G. Aschmann has very fine azaleas, hydrangeas, Easter lilies, spiraeas, cinerarias, tulips, hyacinths and other plants in bloom and bud. We very highly recommend our customers to Mr. Aschmann for fair and reliable business treatment. (Signed) Henry F. Michell, 1018 Market St.

No use talking, Mr. Aschmann has a very fine lot of Easter plants, and I am greatly surprised at the low prices quoted on same. I can recommend Mr. Aschmann to anyone, as I have known him for the past 20 years. (Signed) Geo. Huster, head gardener of Girard College, Philadelphia, Pa.

There is nothing too much said in Mr. Aschmann's ad; all that is said is true. (Signed) Thomas Logan, head gardener to W. L. Elkins, Ashbourne, Pa.

On account of saving express charges please mention if plants are to be taken out of pots or not.

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere; only 25 minutes' ride from City Hall. Take 13th St. car, or Germantown car 8th and Market Sts. north to Ontario St. and walk one square east. Cash with order, please.

Money can be sent safely by Express or Postal Money Order, Registered Letter or Draft.

All goods shipped at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario St., Philadelphia, Pa.
Importer and Wholesale Grower of Pot Plants.

Mention the Florists' Exchange when writing.

Clerodendron Balfourii.

The accompanying illustration gives but a faint idea of the beauty and free-flowering qualities of this handsome greenhouse climber. The flowers are bright crimson, and although somewhat short-lived, the pure white calyces are in themselves pretty and retain their beauty for a considerable time after the flowers have fallen; and as fresh blooms keep expanding toward the end of the panicles, the beanty of the panicles is maintained for several weeks.

The plant illustrated has been in its present location for about six years, having been planted at that time out of a six-inch pot. Growth was somewhat slow at first, but once established, it made rapid progress in covering the space on the wall alloted to its accommodation (a space of about 70 square feet). This it covered in about two years, and since then it has only been kept within bounds by a frequent and liberal use of the knife. If allowed to roam at will, it is hard to tell just how much space it would have covered, up to the present time; certainly several hundred square feet.

The bench in which it is planted is at the warm end of the rose house, and the temperature and conditions there seem in every way to suit its requirements. The only attention the plant gets in the way of soil is a fresh top dressing when the rose benches are filled.

The photograph from which the illustration is made was taken in May of last year. Flowering continued for about two months. After flowering, the plant was allowed to dry somewhat to insure the proper ripening of the wood. It was then severely cut back, and again it bloomed freely in September. A liberal supply of water, when in active growth, seems to be essential to its well-being; and flowering is materially assisted by an occasional application of liquid manure.

In the raising of young stock of clerodendron propagation is most conveniently accomplished by cuttings, though seed may be employed where cuttings can't be procured. Side branches about 4 inches long, taken off with a heel when the wood has become partly ripened, will make the best cuttings. If taken too soft, they don't stand up well; and if too hard, they don't root so freely. A propagating bed, where the plants can be kept somewhat close, and where a temperature of 70 to 75 degrees can be maintained, will root them readily. For the first potting, a light, rather sandy soil is preferable, and while their cultivation is confined to pots the soil is all the better if not too retentive. But when the plants attain sufficient size, I would advocate planting in a box, or bench, in preference to pots, as the roots seem to want plenty of room to ramble, and here will thrive in any good ordinary soil.

To insect pests clerodendrons are not very susceptible, though mealy bug, red spider or aphis will attack them if they are brought in contact with plants infested with these pests. But, as a general rule, the plant can readily be kept clean by an occasional good syringing.

To prevent burning of the foliage a slight shading is necessary during the warm Summer months, but the shading should not be overdone, or it may prevent the proper ripening of the wood. Shading may be removed altogether by the end of September and need not be again applied until April. SCOTIA.

American Institute (N. Y.) Show.

The annual Spring rose show of the American Institute was held in the Berkeley Lyceum, New York, on Wednesday and Thursday of this week. While the exhibits of roses were not numerous, the quality was well up to the average.

The general appearance of the show was considerably enhanced by exhibits of palms and flowering plants from H. A. Siebrecht & Son, New York, and by Lager & Hurrell, Summit, N. J., who had on view a very choice collection of orchids in full flower. There were also several exhibits of carnations, notably three vases from Dailledouze Bros., Flatbush, who staged Prosperity, White Cloud and Fragrance.

W. C. Russell, Millbrook, N. Y., exhibited a new crimson carnation, named [illegible] which seems to be a very good variety. The flower is three inches across, carried on a long stem, and is of a rich deep crimson color.

In the competing classes for carnations, Mr. Russell took first prize for three varieties; W. Waite, second. The winning varieties were Dahein, Mrs. G. M. Bradt and White Cloud. In the class for five varieties of carnations, C. H. Allen, Floral Park, N. Y., was the winner, with Lizzie McGowan, Wm. Scott, Mrs. Thos. W. Lawson, Fair Maid and White Lawson.

Two or three lots of violets were on exhibition. George Hale carried off first prize for 100 single; W. C. Russell being second. For double varieties George T. Schunemann, of Baldwins, L. I., was first; Howard Nichols second.

George Hale showed a nice group of Primula obconica; and Robert Allen, gardener to Mr. E. C. Benedict, Greenwich, Conn., a group of nice cinerarias.

In the rose classes there was only one entry for 50 American Beauty; this was from the Briarcliff Greenhouses, and was awarded a first prize. For twelve American Beauty Howard Nicols won first premium; C. F. Bertanzel, second.

In the commercial class for twelve American Beauty Edwin Waller, of Morristown, N. J., took first. John N. May, of Summit, N. J., won out for 25 Mrs. Oliver Ames, second for 25 Bride, first for 25 Papa Gontier, and second for 25 Bridesmaid. John R. Mitchell, Madison, N. J., was first for 25 Bride; also for 25 Bridesmaid.

For 12 Bridesmaid George H. Hale won first; W. C. Russell, second. For 12 Bride Mr. Hale was again first. For 25 Ivory the first prize went to John N. May, the second to Ernest Neward, Hackensack, N. J. Mr. May likewise took first prize in each of the following classes: 25 Perle des Jardins, 25 Golden Gate, 25 Mrs. Pierpont Morgan. He also exhibited a bunch of his new white carnation, The Bride. For 12 Bridesmaid John R. Mitchell was first and Edwin Waller second. For 12 Perle des Jardins, C. F. Bertanzel was the winner.

For 12 Bride in the private gardeners' class, George Hale was first, and W. C. Russell second. For 12 Bridesmaid Peter Duff took first; George Hale second. For 12 Mrs. Pierpont Morgan, W. C. Russell was first; George Hale, second. For 12 Golden Gate, the first went to Howard Nichols; second to Peter Duff.

In the classes for single roses Peter Duff was first for American Beauty; C. F. Bertanzel, second. For Bridesmaid, no first prize was given, but W. C. Russell and Peter Duff were each awarded a second. For Mrs. Pierpont Morgan, W. C. Russell took first; George Hale, second. For Bride, Howard Nichols was first; Peter Duff, second. For Kaiserin Augusta Victoria, Mr. Hale was the only exhibitor and was awarded first prize. Howard Nichols took first for Meteor; Peter Duff first for Mme. Caroline Testout; George Hale first for Souvenir du President Carnot; C. F. Bertanzel for Perle des Jardins; Howard Nichols for Balduin; Peter Duff for Golden Gate and Mrs. Oliver Ames.

The judges were Messrs. Frank L. Moore, Wm. Turner and Mr Chas. B. Tanner.

Providence, R I.

Jottings.

Mr. Keller has moved into new quarters, which are nicely fitted up.

The Boston Store had a 12c. sale of violets the other day and the demand was heavy. However, the blooms were not as good as the regular flower store article.

The town was full of violets at low prices and the Princess of Wales was most in evidence.

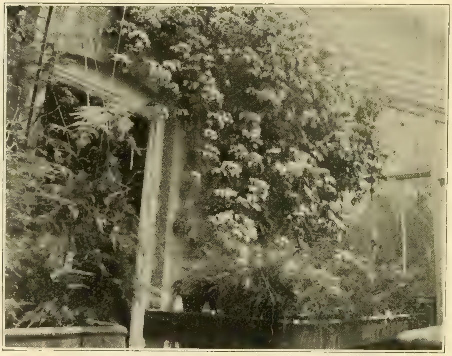
Although there is a lull now, March should see a good month's business.

In Boston we noticed an elegant one hundred Enchantress. The bloom is great in size and color, but looks as though it might bruise and discolor in handling.

J. Newman & Sons were hustling with funeral work. It was a pretty sight to see nine adults working hard on this kind of designing, and doing it without confusion, too.

Wax Bros. always keep a pretty window, and are original in their effects

It would seem as though the little florist, next to Galvin, would hurt the big store on violets. The small place has an immense stock, at low prices. I wonder how Galvin explains the difference in price. C. S. MACNAIR.



CLERODENDRON BALFOURII GROWING IN ROSE HOUSE.

Washington, D. C.

Some Staff Changes.

Mr. Haase, late with A. Gude & Bro., is now with George Cook.

Chas. W. Wolf, formerly with Blackistone, has accepted a position with Geo. C. Shaffer, and has charge of the Pennsylvania avenue store.

Mr. Suppert, late with Loosé, is now with Henry Pfister.

Wallace Kimmer, lately of Blackistone's staff, has joined forces with A. Gude & Bro.

A Beautiful Wreath.

For the funeral of Hubbard Smith, who died in Italy, J. R. Freeman made an elegant design in the form of a placque, on which was the insignia of the Columbia Athletic Club, surrounded by a double crescent wreath of magnolia leaves, and having a cluster of dendrobiums and Adiantum Farleyense on the left upper side; on the lower right side was a cluster of roses. The wreath was 6 feet 6 inches in diameter. C. W. W.

Pittsburg.

The Week's News.

J. W. Ludwig has returned from his Eastern trip and brought some new ideas with him. He is a great observer and nothing of any importance in the florist line escapes his eagle eye.

Joseph A. Goudy, representing Henry A. Dreer, Philadelphia, spent several days in our vicinity. He is showing and taking orders for Fall delivery of the new Pandanus Sanderi, a beautiful plant far ahead of Veitchii, and said to be as hardy and easier to grow. Mr. Goudy made some good sales in our town.

M. L. Twomley, representing the J. W. Sefton Mfg. Co., paper box manufacturers, was also a visitor.

W. Clark, treasurer of the Pittsburg Cut Flower Co., has the sympathy of his many friends in the loss of his daughter, Letitia, 5 years old, who died March 11.

At last the express company has come to terms. Notices have been sent to all in the trade that the rates on cut flowers have been restored to the old figures.

John B. Ferguson, a well-known East End florist, was shot and killed at New Castle, March 9. Mr. Ferguson was about 50 years old, and had been conducting a landscape and general florist business for many years. Some few years ago he operated a wholesale cut flower store on Sixth avenue, but could not make a success of it, and went back to the florist trade, having a store in the East End. Lately he was associated with his brother in the tobacco business in a small way.

E. C. REINEMAN.

Cleveland.

Club Notes.

At the club meeting Monday night about forty members were present. Mr. Tilson was elected to membership. George W. Smith, of Wade Park avenue, had a nice vase of his seedling pink carnation Magdalene on exhibition, and G. M. Nauman exhibited his seedling Miss L. Nauman. Both were much admired. They will be offered to the trade next season.

It was decided to have a carnation night at the next meeting, which occurs on Monday evening, March 23. All the new varieties will be there, as well as some of the standard sorts, and from the arrangements that are being made it will be quite a show.

Mr. Weiss of Philadelphia, was a guest of the club at the meeting, and gave his opinion on the carnations that were staged.

Walter Mott, of Jamestown, N. Y., called on the trade this week, and reports business good; also that the Lakeview Rose Gardens will erect another range of houses as large as those put up last year.

J. B. Whitaker, of Canton, O., was in the city buying up Easter stock.

F. M. Smith, of Smith & Fetters, has left for a three weeks' stay in Florida in order to gain strength after his siege of sickness. Ed Fetters will return from Arizona, where he has been in search of health. J. A. Eastwell, of the same firm, will leave for the East this week to buy Easter stock. He will take in Dreer's and a few more of the largest growers around New York and Philadelphia.

Fred Aul, of Glenville has a pure white sport of G. H. Crane carnation.

Review of the Market

NEW YORK.—The weather has been wet and disagreeable on several days this week, and the cut flower business has suffered proportionately. On Monday it rained all day, and as shipments of flowers were somewhat heavy, there was a general accumulation of stock in the hands of the dealers, little business being done. While it cannot be said that the stock of any particular flower is coming in very heavy quantities at present, there is so little demand that there is really no fixed price on any product, and it is evident, from present appearances, that this Lenten season is to be the worst that has been experienced in this city for some years, though we are inclined to the belief that the weather is in a larger measure responsible for poor business than is the observance of religious offices.

Roses will not average up so well in value as they did last week; neither will carnations. Bulbous flowers are not nearly so plentiful as they were, yet the values remain about the same. Violets have got clear down as to rates, and a good supply of these flowers comes in every day.

Sweet peas and freesias are quite plentiful, and have to be sacrificed in order to clear them out.

Lilies that are not up to the mark are going at 4c. each; and there is a lot of such stock on the market.

Cattleyas are hard to dispose of, though not any more so than are the many dendrobiums that are coming in.

Lily of the valley has shortened up in supply somewhat, but there is little advance in its value as yet.

We are expecting better business every day, and, if the weather gets settled, we shall no doubt see prices go up again.

BOSTON.—Business during the latter part of last week showed some improvement, and gave some encouragement for this week; but it has rained almost constantly since Saturday, and reports are general of unsatisfactory trade in the retail district, though the wholesalers report it fairly good. The market is still flooded with all kinds of seasonable stock, except the medium and smaller grades of roses, which have cleaned up remarkably well in comparison.

American Beauty are very sticky, and a brave effort is being made to keep the values up, but this has been found to be up hill work, and a break may be expected shortly, if present conditions continue. For the fancy specials very few realize the $50.00 mark, which is asked for all, and many have to be sacrificed at much lower figures after they have been kept a day or two. No. 1 grade make $25.00, and extras $35.00 per 100, with smaller ones at from $4.00 to $16.00. The finest Bride and Bridesmaid are now freely offered at $12.50 per 100, and do not move nearly as fast as the medium and smaller grades, which usually clean up daily at from $8.00 down to $2.00. Red roses are in very good supply, but the really good ones are not plentiful.

Carnations are greatly in overstock and values are tending downward. Some very fine flowers are now offered at $1.50 to $2.00 per 100, with $2.50 as high for the best of the ordinary sorts; fancies and novelties make $3.00 and $4.00. Much of the ordinary stock is cleaned out at $1.00 to $1.50, and inferior stock at 75c. to $1.00.

The same overstocked condition prevails as regards bulbous flowers as last week, with Trumpet Major and Princess at $1.00 to $1.50 per 100, and Von Sions and Empress at $1.50 to $2.00. Golden Spurs make $3.00. Tulips, single, are held at $1.50 to $2.50, with doubles at $3.00 to $4.00. Dutch hyacinths bring $3.00 per 100.

Lilies are very plentiful at from $6.00 to $10.00 per 100; and lily of the valley is very abundant at $2.00 to $3.00. Violets continue druggy at 25c. to 50c. per 100. Pansies and primroses in small bunches are in good supply, the former making 60c. to 75c. per 100, the latter selling at $1.50 per dozen bunches. Sweet peas do well at 75c. to $1.00 per 100.

Mignonette is now in good supply at $2.00 to $4.00 per 100. Adiantum is coming in a little more plentifully, selling at 75c. to $1.00 per 100. F. J. NORTON.

CHICAGO.—Since last report trade has been fairly good, and the opening days of this week point to a better market as regards prices. Values have been a little stiffer on most all lines, with the exception of long-stemmed American Beauty. The demand for these latter has fallen off considerably and a great many are to be found after the morning's sales. The supply of other roses does not run much above the demand, with the prices about the same as at last report. Liberty are not in over abundance and the price is pretty well maintained on these.

Carnations are on the short list; there are not enough coming in at present to supply all demands. White varieties are the scarcest. Prices run from $1.00 to $4.00, for common to fancy grades, while a few novelties, such as Prosperity and Harlowarden are bringing $5.00 to $6.00.

The supply of violets is about the same as last week, with a fair demand.

Bulbous stock is yet seen in great quantities. Tulips are somewhat cheaper; some pretty good stock can be bought for $2.00 or less. The price on other stock remains about the same.

More sweet peas are to be seen, but for some reason this stock does not move as readily as in former years, nor is the price as good.

Some extra well grown double stocks are to be seen, and are selling at $4.00 per 100. Greens remain the same as at last report, with smilax in the lead.

R. J.

PITTSBURG.—A little more activity was noticeable in the flower business the second week in Lent, mainly due to funeral orders. It takes a pretty good constitution to withstand the many changes of our weather, and pneumonia is much dreaded, as it has caused many deaths lately. The last few days the thermometer has been around 60 degrees, with continuous rains. Buds are pushing fast; peonies are above ground, with prospects of severe weather yet to come. The growers, particularly the plant growers, are very busy at present preparing hotbeds and getting plants in good condition for early sales. From present indications the bedding plant trade should be good this season, as several have quit growing this stock altogether, and there will be considerably less of it on the market. In cut flowers the market is well stocked, except Harrisii lilies, which are few indeed in comparison with the supply of other years, and will likely be so for Easter and bring a big price. Most of our growers are disgusted with lilies and vow they will not touch any more. The past season has certainly been the worst ever experienced.

Palms and ferns are selling fairly well. John Bader, who is the largest grower of such plants in the western part of our State, has sent out some good orders the past month. Even Latania borbonica, which has gone rather slow the past few years has been moving nicely with him lately.

The seed trade is very active; working overtime is in order with all seedsmen.

E. C. R.

INDIANAPOLIS, IND.—The Lenten season has as yet not affected the flower business to any extent. Social affairs seem to be going on the same as before, with possibly the exception of a few weddings. Funeral work has been keeping up well, and aids materially in using up the large amount of material now at hand. There has been a decline in the price of roses, Bridesmaid, Bride, Meteor, Sunrise and Ivory selling for $6.00 per 100 for A No. 1 stock; seconds and shorts at 1c. to 3c.; $1.00 to $2.00 per dozen is the retail price for roses, only very select ones bringing the last named price. American Beauty are good, and are holding their price better than other roses. Carnations are plentiful, but hardly so good as in some weeks past. They are selling at 2c. to 3c. wholesale, and 50c. to 75c. per dozen retail. Bulbous stock is over-plentiful. Common varieties of tulips, daffodils, narcissus, and lily of the valley sell at 60c. per dozen. Freesias bring 30c. per dozen. Double violets are small, and there is not much demand for them at 35c. per bunch of 25; single violets are plentiful and sell readily on account of their low price.

There has been a scarcity of A No. 1 blooming plants, which will soon be supplied, as many of the growers have a large number close at hand. I. B.

ST. LOUIS.—White carnations are a little scarce, but other white stock is in good supply. Paper White narcissus is just about over. Very fine double Von Sion are in their height and plentiful. The top price of roses is $8.00. In general prices on all stock have declined a shade, but scarcely enough to take much notice of. Violets of excellent quality are very plentiful. Big orders take them for 25c., and they move out on small trade at a good steady rate. A few tulips are on the market; they go at 4c. Not many Dutch hyacinths are received. Only a few Harrisii lilies are handled; but callas are in good supply and demand. Sweet peas are slow all around.

F. W. M.

CINCINNATI.—Lent has so far cut very little figure in the decrease of business; in fact, trade has been exceedingly good, with plenty of all kinds of stock. Prices have remained firm for good stock. American Beauty is about the only flower that has dropped in price. These are now selling at: Fancy special, $4.00 per dozen; Bride and Bridesmaid bring $4.00 to $8.00; Liberty, $4.00 to $10.00; carnations, $1.50 to $4.00; lily of the valley, $3.00 to $4.00; tulips and narcissus, $2.00 to $3.00. Smilax is very scarce. Harrisii lilies fetch $12.00 to $15.00 per 100; violets, 50c. to $1.00. Inquiries for Easter prices are now commencing to come in, but, of course, it too early to say much about these pric yet. E. G. G.

CLEVELAND.—Trade has fallen considerably since Lent began. Stocks flowers are increasing, and prices a weakening. The street peddlers are ta ing full advantage of these conditions a the mild weather, and are disposing lots of stock. The restoration of the express rate helps these fellows in th town, as most of the stock sold by the comes from Chicago or Pittsburg.

Prices for the week are as follow Roses, tea, $4.00, $6.00 and $8.00; carr tions, $1.50 to $4.00; violets, 25c. to 7 per hundred; tulips, daffodils, Roman h acinths, Paper White narcissus, $2.00 $3.00; hyacinths, miniature, $2.00 to $3. No. 2, $4.00 to $5.00; No. 1, $6.00 to $8. callas, $8.00 to $10.00; Harrisii lilies, $10 to $15.00. Green goods as last quoted. T above prices are only for the best st in their respective sizes, as some lots selling much lower. G. W. S

PROVIDENCE, R. I.—We note a cided lull in business, which is nowh near as bright as a week ago. Ev carnations have joined the ranks of s plus flowers and the best grades ha dropped a full cent. It is now possi to buy the very best at $2.00 to $3.00 100. Roses are in fine supply, at $ to $5.00, and violets stand still at an thing over 35c. per 100. Funeral work still brisk. Daffodils and tulips are ha to sell at 2c. C. S. M

BUFFALO.—For some weeks trade conditions along retail lines ha been quite satisfactory. In this, flow for funerals have been leading. Such mand now is lighter, and with the Len season reducing other calls, quieter ditions rule, and flowers in best quali are overplentiful on some days. At wholesale store, W. F. Kasting menti a surplus of stock at present. Spr openings of fancy departments in some the leading stores have called for sc decorating and loaning of plants.

VID

DETROIT, MICH.—The prevailing weather has no tendency to overstock market. In American Beauty there i good supply of all grades. Other ro are very fine, bringing excellent pric though somewhat lower than last rep ed. Carnations in all grades are picked on sight, especially white. In vio there is at times a little oversupply, same can be said of bulbous stock. S lax is scarce. DILGE

GRAND RAPIDS, MICH.—There just enough flowers to sufficiently m the lessened demand consequent on L Carnations realize from 50c. to 75c. $1.00 per dozen; roses, $1.00 to $1 American Beauty, $2.00 to $5.00; viol 20c. to 40c. a bunch; lilies, $2.00 to $ per dozen; lily of the valley and ot bulbous flowers, 50c. per dozen.

G. F.

LOUISVILLE, KY.—Owing to the c tinued good demand for funeral wo business is satisfactory. While flow of every class are more plentiful, th has not been much of a surplus. Pri quoted last week still hold good.

A. R.

BALTIMORE.—With the advent of L the usual gluts in all kinds of stock taking place. Carnations and violets plentiful, and are being offered on streets for little or nothing. Roses white carnations are the least plentifu

E. A

CHANGES IN BUSINESS.

SALEM, N. H.—James Littlejohn given up his greenhouse business h and is to sell out everything in connect with it at auction.

FITCHBURG, MASS.—Mrs. C. E. Ma field will open a flower store in the Jo sonia Building, Putnam street.

ATHOL, MASS.—George Sutherland Natick, has bought the business of Ja Sutherland & Son, florists, on South M street, and will take possession at o Mr. Sutherland formerly lived in At James Sutherland will retire from b ness, and his son, David, contempl removing from Athol.

GARDENIAS

SAMUEL S. PENNOCK
1612-14-16-18 Ludlow St., PHILADELPHIA, PA.

Mention the Florists' Exchange when writing.

Baltimore.

Club Notes.

The Gardeners' Club held its annual election on March 9, with the following result: Richard Vincent, Jr., president; John A. Cook, vice-president; J. J. Perry, corresponding secretary; Philip B. Welsh, financial secretary; John Wagner, librarian; Fred Burger, treasurer.

A communication was received from M. T. Jones, superintendent of traffic of the United States Express Company, stating a "classification of cut flowers at single merchandise rate" would be made effective March 10.

After the election the annual banquet took place at the Rose House. Among the invited guests were several of the brethren from Philadelphia, among them President S. A. F. John Burton and Robert Craig, D. T. Connor, Robert Kift, George Moss, Frank Adleberger, William Gibson and John Dunham; also Mr. Bauer, of Washington. Retiring president, Robert Halliday, was presented with a silver loving cup by friends of the Gardeners' Club. The presentation was made by George O. Brown. Robert Graham presided as toastmaster. Mr. Halliday was surprised, and so visibly affected that for some time he was unable to acknowledge the gift. The table decorations consisted entirely of carnations.

Rambles Among Growers.

Philip B. Welsh is growing good Mrs. Lawson carnations in his new house, which he has given a little shade at this date. J. J. Perry handles the greater part of Mr. Welsh's stock which, owing to its good quality, finds ready sale.

Halliday Brothers' carnations are in the pink of condition. A light Daybreak pink seedling shows up well.

I. H. Moss is cutting carnations in plenty at present. His stock is in fine shape. He is sold out of outdoor-grown roses to the wholesale trade. He has invested heavily in Lillian Pond carnation.

Bulbous stock is going slow at present, judging from the stock one sees around. EDWIN A. SIEDEWITZ.

Cincinnati.

News Notes.

At this writing, March 10, we are confronted with a very high river; and from the reports sent out by the Weather Bureau we shall have a decided flood before these notes reach the readers. Several of the craft are now getting ready to vacate.

The annual carnation meeting, to be held at the club rooms of the Cincinnati Florists' Society, will occur on Saturday, March 14, and from all appearances it will be a banner meeting. We expect to see all the new sorts staged.

In September, commencing about the 10th, the Fall Festival Association will offer $1,000 for two floral exhibitions. The first will probably be for cut flowers, and the second for table decorations exclusively, $500 being used for each exhibit. The schedules have not been issued as yet, but will be out in a very short time.

The stores are all busy with funeral work, which has cleaned up the market nicely. E. G. GILLETT.

Buffalo.

News of the Week.

A Gardeners' and Florists' Union has come into existence here, headed by John Bischoff as president. Its projected scope and intents as yet seem rather undefined.

On Monday of this week an automobile show was opened in City Convention Hall. In compliment to same some special window showing was done by Palmer. Arthur Beyer fitted up a full-sized model of a "machine" in good style and well proportioned. Galax leaves were effectively used for all the flat panel and inside seat portions, and the edgings of same in white carnations and Bride roses. These blooms were also used for outlining the spokes and rims of the wheels. A wax figure of a regulation chauffeur occupied the seat. The large window of the uptown store of this firm was taken up with a decorated "auto" done in yellow daffodils, violets being also freely employed. With a wax model of a female figure, gowned in navy blue, given an occupant position in the vehicle, a color scheme most brilliant was the result, and proved attractive to the passing public. C. A. Schnell planned this arrangement.

The Buffalo Florists' Club mustered a quorum at last week's meeting on Tuesday evening, and nominated some of its best element as candidates for election to offices for another year. Election is to be held at the next meeting.

Easter prospects begin to engross attention in the stores during these comparatively idle days. VIDI.

Be Brave.

The timid man does not advertise, and his more enterprising neighbor who does advertise flourishes.—Class Advertising.

THE FLORISTS' EXCHANGE, 2 Duane Street, N. Y

Worcester, Mass.

Thursday afternoon, February 26, Geo D. Leavens, of Grafton, gave a talk on grass culture in Horticultural Hall. Mr. Leavens described the whole process of hay-making from the preparing of special fertilizer, through the plowing, harrowing, sowing of seed, cutting, curing and storing away.

The subject was so well handled it would make a good farmers' bulletin for the Government to issue. The audience found Mr. Leavens well posted, and the discussion at the close brought out much valuable information.

The first exhibition of the season was held at Horticultural Hall March 5. The attendance was not as large as the high quality of the display would warrant. The center of attraction was an immense cœlogyne from the private greenhouse of John M. Whitins, of Whitinsville. It was the finest plant of the kind ever seen in Worcester. A conservative estimate places the number of buds and blossoms at about 1,500. H. F. Littlefield showed an Azalea indica that measured three feet across, covered with about 1,000 buds and blossoms. Edward W. Breed, of Clinton, who is expected home from Jamaica about the middle of this month, was ably represented by his foreman, who carried off three first, two second, and three third prizes, with a money value of $16.50. Fred. A. Blake, of Rochdale, won eight second and three third prizes, footing up $20. H. F. Lange's carnations carried off first honors.

CAROLUS.

Utica, N. Y.

March 5 was meeting night of the Utica Florists' Club. There was a very good attendance. Several new members were elected and two proposed. At the rate at which we have been getting them in for the past few months we shall soon have them all. Our club is in fine condition, and we ill attend with a great deal of pleasure.

We had a very interesting paper on "Begonia Gloire de Lorraine, and How to Grow It," by J. C. Trandt, of Canaharie. I think we all know more now about the plant and understand its requirements very much better. A vote of thanks was tendered Mr. Trandt.

The club decided to extend an invitation to our Syracuse brethren to meet with us on March 18 to visit with our florists during the day, and in the evening we shall see who are the best bowlers. We expect a large delegation. Wm. Mathews has a sport of Mrs. Lawson of that beautiful Daybreak color; it is fine and we hope it will stay, as we can use that color.

Our President, F. J. Baker, is one of the happiest men in Utica; it is another boy. The boys will all be pleased to see him at our next meeting; one case will be enough, Frank.

W. A. Rowlands is all enthusiasm over his trip to the carnation show and expect to see three or four more houses go up this season at his place. It looks as if there would be quite a number of places built or added to in the near future.

QUIZ.

Tarrytown, N. Y.

A meeting of the Tarrytown Horticultural Society was held February 26, President David McFarlane in the chair. The prize box of cigars, for best display of bulbous flowers, was awarded to James Ballantyne, gardener to Mrs. Geo. Lewis. For the March meeting a similar prize, for best dozen cut roses other than American Beauty, is offered.

The F. R. Pierson Co. exhibited three new carnations—Flamingo, Albatross, and Sunbird—which will be sent out January, 1904, and for which the judges awarded a certificate of merit.

F. R. Pierson offered the following prize to be awarded at the annual show in November next: A silver cup for 36 blooms of chrysanthemums, 12 varieties 3 of each, of the following sorts: Mrs. J. W. Pockett, Convention Hall, W. R. Church, Durban's Pride, Earl of Arran, Edith Pilkington, Godfrey's King, Fair Maid, Yellow Timothy Eaton, Chas. Langley, C. J. Salter, Mrs. C. Nevelli, Lord Salisbury, Queen Alexandra, Madame Reboul, Mrs. Thurell, Millicent Richardson, John Pockett, Mabel Morgan, Mrs. George Mileham, Bessie Godfrey, Mme. Herwedge, Florence Molyneux, and Mme. Cadbury; also a cash prize of $25.00 to be divided as follows: For best plant of Nephrolepis Piersoni, $15.00; for second best plant, $10.

H. J. R.

Orange, N. J.

Society Meeting.

Charles H. Totty, of Madison, read a concise and practical paper upon the chrysanthemum on Wednesday evening, March 4, before the New Jersey Floricultural Society, at its regular monthly meeting. He confined himself to cut flowers, and gave from his own experience, avoiding all vexatious differences of opinion, and following the usually accepted manner of cultivation, fertilizing, etc. Of special interest was his endorsement of compact, flat, rather than upright, loose packing, naming the method employed by the E. G. Hill Co. as that which has demonstrated the flower's superiority in carrying long distances for exhibition.

In the discussion which followed, the superiority of nitrate of potash over soda was brought out. Mr. Totty applies one pound to fifty gallons of water and uses it with a Kinney pump, sometimes combining this fertilizer with liquid sheep manure, but this latter requires more judgment to avoid spot. The merits of horse, chicken, and other manures were discussed. The subject of treating all varieties alike was raised by John Hayes. Mr. Totty does not adopt this method. His list was particularly valuable, being quite up-to-date, and he emphasized this point as an essential to successful growing for exhibition purposes.

Mr. Totty recommended the use of not over two stems, as three had a tendency to scatter the energies of the plant. He gave Mrs. Henry Robinson as an example of this.

Upon the point of difference of plants in regard to hardness of wood, raised by President George Smith, this characteristic in Merza was brought out; also the method of puncturing the cut stem below the estimated "water line." Though the variety might wither slightly in carrying, it would "come up" where so treated after shipment. The necessity of a stem full of water before shipment was made plain. Peter Duff endorsed Mr. Totty's methods; and the society testified its indebtedness to the speaker by a unanimous vote of thanks.

In the monthly flower show, which President George Smith has instituted, the orchids of Arthur Bodwell, gardener for Mr. Wm. Barr, of Llewellyn Park, were favorably noticed, scoring 80 points, the only other plants receiving so high a mark being the plants in pots -a bilbergia and Gymnogramma chrysophilla—of Malcolm McRorie. Among the carnations were the usual up-to-date varieties. The Bride, a recent white introduction of John N. May, grown by John Hayes, received 65 points. Peter Duff's roses were up to their usual excellence, receiving 70 points. Dietrick Kindsgrab showed a vase of well-grown carnations, receiving 70 points, and a very symmetrical cypripedium, which scored 70 points. Other exhibitors were: President Smith, roses and apples; Vice-President Wm. Burnett, carnations and narcissus; Treasurer McRorie violets and hyacinths, the last of remarkably beauty, scoring 85 points; Peter Duff's collection of vegetables, and Henry Hornecker's Primula obconica.

Four new members were elected. Communications from the N. J. Horticultural Society and the Chrsyanthemum Society of America were read The first, asking for co-operation, was left to individual members; the last, soliciting a prize to be offered by the society, was handed to the executive committee, with power.

J. B. D.

Quite True.

Profitable returns is all the good advertiser considers. He does not worry about the cost of his ads. He wants profits and it does not matter how much an ad costs if it pays. Cheap space is often very costly advertising.—Class Advertising.

Express Rates.

The official announcement, by the superintendent of the New England division of the Adams Express Company, that on and after the 10th inst. the company would accept shipments of cut flowers at single rates, "where no special service was required," was received with great satisfaction by the florists in this vicinity. "If special service, either in forwarding or delivering at destination, is required, a reasonable additional charge will be made commensurate therewith," is the way the announcement of the change is qualified. This will not be objected to by shippers, provided the "special" service required is given.

One very general complaint by florists everywhere has been that, with the increased rates, there has been no improvement in the service. It is undoubtedly a fact that the express companies found that their business in cut flowers was steadily decreasing. Goods that formerly went through their hands have of late been shipped by freight or sent by mail; and as the weather became more favorable, this departure would be more pronounced. The florists, as a whole, have made a decided stand against this increase of rates, and they are to be congratulated on the result.

W. R. Pierson left on Monday for a trip through Western New York in the interests of his father, A. N. Pierson.

H.

Milwaukee.

Riemer & Radmer, agents of the Herendeen Manufacturing Company, have just finished installing hot-water heating plants in the new greenhouses of Mr. Moore, of Lake Geneva, Wis., and of Mr. Whiting, of Corliss, Wis. The boilers used are in both instances the Furman new sectional, having 30-inch grates.

Riemer & Radmer also have in view other work among greenhouse parties, and will make more installations than ever before the season closes this year. This is partly owing to the growing popularity of the Furman new sectional boilers for greenhouse use, and partly to the enterprise and energy of the firm named.

CLEAR CYPRESS ABSOLUTELY FREE OF SAP

IT IS just as essential in building to get good material, as it is to plant house with good stock.

You cannot get a good cut of flowers from poor plants, neither can you build a substantial house from poor material.

We have made greenhouse construction a special study.

You are welcome to the benefit of our wide experience.

Get our estimate. We can serve you better than your local mill.

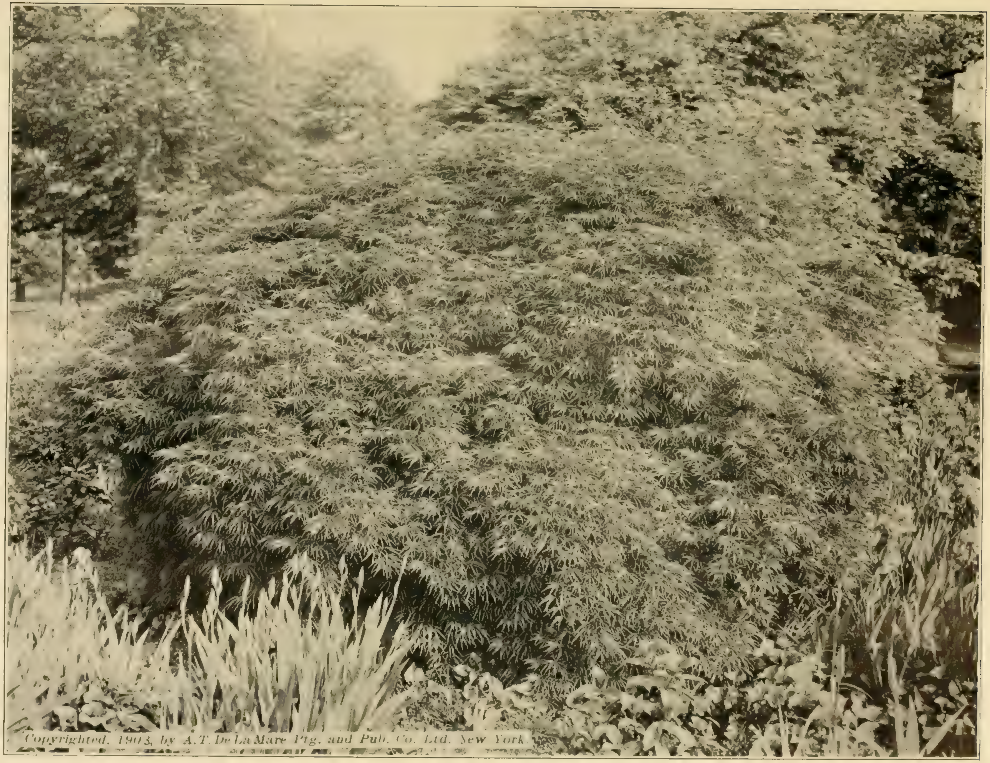
Our Gallery of Fine Specimens



Copyrighted, 1903, by A. T. De La Mare Ptg. and Pub. Co. Ltd. New York.

Plate 49

ACER POLYMORPHUM DISSECTUM ATROPURPUREUM—Blood-leaved Dissected Japanese Maple

The red foliage of this Maple is particularly pleasing in early Spring and Summer. Though almost as blood-red as that of the common blood-leaved one, it does not appear so, because its finely divided leaves present less quality of surface; but it is beautiful always, and most desirable.

Special Spring Trade Edition Next Week

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 12 NEW YORK, MARCH 21, 1903 One Dollar Per Year

10,000 POTS OF

LILIUM LONGIFLORUM

FOR EASTER.

We have an exceptionally fine lot of these, and plants are in perfect condition, with fine, healthy foliage, and A No. 1 in every respect, averaging from four to eight buds each. We are now booking orders for Easter delivery or earlier at the rate of

12c. per Bud or Flower.

CUT LILIES AT SAME PRICE.

In ordering please state whether plants in pots or cut lilies are wanted.

Customers at a distance wishing to procure a supply will find it safer to order early, just before the flowers open, as plants can then be shipped cheaper and with greater safety. You will then have the plants on hand and avoid the rush at the last minute. A great many of our customers order in this way, and find it a decided advantage. We can ship at any time now plants selected so that they will just come into bloom in nice shape the week before Easter.

We should be glad to have buyers from near-by points call at our Scarborough greenhouses and inspect the stock. Plants can be selected and laid aside and reserved at any time and delivered when wanted.

We have also an Exceptionally Fine Stock of

Ficus Elastica, Kentias, Boston Ferns, Araucarias, Large-sized Latania Borbonica, for Decorating, Etc., Etc.

COMMERCIAL BEAN GROWING IN NEW YORK STATE.—A bulletin on this subject has been issued by the Cornell University Agricultural Experiment Station at Ithaca, N. Y. The author is J. L. Stone. It is stated the present production in this State approaches 2,000,000 bushels per year. The industry was begun in New Orleans County about 1839. While beans will grow in a wide variety of soils and climates, the production of the commercial crop seems to be limited, chiefly on account of the attacks of the bean weevil, to a narrow belt along the northern border of the United States, and to a portion of California. The bulletin gives full instructions as to culture, etc.

European Notes.

Mild conditions still prevailing, business in all parts of the Continent keeps good. Germany is having a busy time, and realizing good prices on what is left of their stocks; France and Italy also report sales good on almost every article, although French-grown mangel does not move, and the crop of yellow onion far exceeds present demands.

Seed crops are reported all around to be fast breaking into life. The biennials in Germany, influenced by the humidity of the atmosphere and soil, are sending out their new roots, and the effect of a frost hardening up the ground would be serious. France reports all crops have stood well so far. White carrots make a better show than usual. Red varieties are very good and plentiful, although a few districts report a grub at the root which is doing a little damage.

From Italy come very favorable reports of the prospects for the crop of cauliflower seeds. Since October, frequent rains have fallen and plants have developed well. The months of December and January were, for this climate, rather cold; it has also been cold early in February, so that the running to seed is retarded. By this means we hope they will not suffer from any later frost which may yet come.

The crop of seed last year, especially of the earliest strains, was only a very moderate one, and the seed itself was not well developed; but there should be a good crop of good seed this year, for on account of the low prices the cauliflowers are realizing in the northern cities of Europe, many of the gardeners will let their plants stand for seed. Of onions and leeks it is now only possible to say that they are looking very well, and we may expect a good crop. Perennials are coming into new life, and growers are now sowing the earlier varieties of flower seeds.

S. B. Dicks, of London, has arrived in Egypt on his way to South Africa, via the Red Sea and the East Coast Route. EUROPEAN SEEDS.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President.
D. S. Lake, Shenandoah, Ia., Vice-President.
George C. Seager, Rochester, N. Y., Secretary.
C. L. Yates, Rochester, N. Y., Treasurer.

LINCOLN, ILL.—J. W. Jones, of Detroit, bought in the property of the W. E. Jones Nursery Co., at the Master in Chancery sale, for $2,000.

MONTGOMERY, ALA.—The executive committee have arranged for carrying into execution the new law requiring an inspection of all nurseries in Alabama and of all fruit trees sold in the State. The inspection of the nurseries and the fruit trees will be done by Professor R. S. Mackintosh, State Horticulturist, who is a member of the faculty of Auburn College.

ROCHESTER, N. Y.—The certificate of incorporation of The H. S. Taylor Nursery Company has been filed. The capital stock is $10,000, divided into 100 shares of $100 par value each. The incorporators, who are also the directors for the first year, are Hinman S. Taylor, Frederick V. Taylor and J. Frank Norris. The company was incorporated to take up the business and property of J. F. Norris & Son, which has been located in Brighton.

Ellwanger & Barry, nurserymen, Rochester, N. Y., are introducing two new hardy rambler roses this Spring. One, named Leuchstern, bears single flowers in large clusters, of a bright rose color with a white eye; foliage and habit similar to crimson rambler. The other novelty is named Rubin, a deep red color, and having flowers somewhat larger than crimson rambler. This firm is not sending out a new catalogue this year, but a copy of their last edition will be mailed on request.

World's Fair Horticulture.

Pomological and Nursery Exhibits.

The fruit growers and horticultural societies, both State and local, are taking great interest in the plans making for the fruit exhibit in the horticulture building. The fact that there is to be practically twice as much space devoted to this exhibit at St. Louis as there has been at any former exposition is encouraging news to them.

The space will be secured by an officer representing the State Commission of each State, and all exhibits of this character will be under the management of the State Commission unless there should be a State that does not have a commission, in which case some other arrangements will be made.

Fruit growers, in making an exhibit of fruits, are assured that they will not lose their identity by an arrangement of this kind, for it will be required that all exhibits be plainly marked, showing the name of the grower and the locality where the fruit was produced. This will be of great value from an educational standpoint, as it will give all who are interested in studying fruits, definite information as to the locality where the fruit was produced.

It is important that fruit growers everywhere begin at once to prepare to grow fruit for exhibition purposes. Sufficient plant food should be supplied to enable the trees to bear perfect specimens, and this should be followed throughout the season with the most thorough cultivation. Thorough cultivation will hold the moisture in the soil which will be available for the use of the trees and plants in development of perfect specimens of fruits.

The thinning of fruit should not be neglected. This is an important consideration where it is desired to grow perfect specimens. In doing this work it is advisable to leave only such specimens as promise to be large and perfect, and also those that are not shaded by foliage.

States that are planning to exhibit must have a sufficient quantity of fruit in cold storage so that the space allotted to them will be entirely covered at the time of the opening of the exposition, and in order that they may have a sufficient quantity in reserve in storage to keep the space covered until the 1904 crop of fruit is available.

A circular on cold storage of fruits will be sent out from the Department of Horticulture in good season, giving the latest information obtainable concerning that subject.

It is intended that a collective exhibit of nursery stock from all sections of the world will be made in the Department of Horticulture of the Louisiana Purchase Exposition. This will afford a splendid opportunity for nurserymen, botanists and fruit growers to study the individual varieties and types represented. From an educational standpoint, the value of such an exhibit will be appreciated by all interested in horticulture.

It is also expected to have a collection of the newer varieties of grapes in bearing, especially those that have been produced by crossing. These will be planted the present Spring so that they will be bearing in 1904.

A collection of varieties of strawberries will be planted the present Spring. These will be confined to the new varieties. A part of these will be new varieties that have been produced by a careful system of breeding for the purpose of obtaining those possessing certain characteristics.

In the nursery exhibit, a collection of nursery trees affected with crown gall and other diseases, as well as trees infected with woolly aphis, will be made.

FREDERIC W. TAYLOR.

"Hardy" Eucalyptus.

Nurserymen say they are having no end of useless correspondence from parties inquiring for hardy eucalyptus trees, having seen in the Saturday Post an article on this tree in which it was stated that it was suited to any place "from a tropical swamp to above the snow line on the mountain tops," and that it was to "solve the fuel problem of this country." The article was copied into other papers, where it came under my notice, and a greater lot of rubbish could hardly be put together. Nurserymen and florists all know the eucalyptus trees are from Australia, or that part of the Pacific, and will not stand more than a few degrees of frost, and some species none at all. They are really but greenhouse plants, excepting where it freezes but little.

Earliness of the Season.

It has been some years since so many of the early shrubs are in flower as there are at this date, March 12. Cornus mas is a show, with its shoots thickly covered with its small yellow flowers. Daphne Mezereum is in bloom, so is Jasminum nudiflorum, Lonicera fragrantissima and the catkins of hazel nuts and alnus are fully expanded.

The Cornus mas is not in nearly as many collections as it should be. It is an old shrub, and can be had from almost any nursery. It is the first shrub to make a good display of flowers in Spring.

Hardy Yellow Jasmine.

What a lovely early Spring flowering half climber is the Jasminum nudiflorum, commonly called the hardy yellow jasmine! The Spring now on us has been favorable to this plant; no freezing to catch its buds, and at this writing, March 12, the many plants of it in the gardens hereabout are a mass of yellow flowers. In addition to its use as a climber for fences, or to place alongside a low wall, it makes a pretty object set out as a single specimen, and tied to a stout stake. In a few years there is a mass of shoots sustaining an upright position for some feet without the aid of a stake, and these appear then a shrub with graceful drooping shoots.

This jasmine makes a pretty pot plant. It must be grown in a thrifty way, not pot-bound, but vigorous, with nice, young shoots; then an abundance of its yellow flowers are produced. By keeping such plants in pots, in a cool, shady place until a few weeks before Easter they would be available for that occasion and the flowers are good for a week after expansion, and all do not open at the same time. After flowering, give the plants a rather close pruning.

The Planting Size of Evergreens.

In conversation with a fellow nurseryman recently, on my remarking that there was a dearth of large evergreens, he said he was very glad there was, and he then went on to relate how the large evergreen and the large deciduous tree were each a menace to the good feeling which should prevail between the nurseryman and his customer. These large trees were hard to dig successfully, hard to deliver and hard to grow, he said; and for all concerned the smaller-sized tree was much the better. There is a great deal of truth in what this friend stated. When advice is asked of me I invariably urge the selection of a medium-sized tree. It is surer to grow, and will overtake a larger one in most all cases, as its roots are not injured in transplanting to the extent those of larger ones are. And then there is the satisfaction of seeing the smaller one gain stature and thrive!

An evergreen of three feet and a deciduous tree of eight feet make an appearance at once, and in a very short time double their height. The nurseryman is safe, and so is the customer, when such trees as these are planted.

In the case of a dwelling with no trees about it, it is proper to set large trees, to be in character with their surroundings, even if they do stand still for a year or two; but, as a fact, smaller trees will usually outstrip them in growth.

Japanese Pines.

The following comes from Japan:

"We have been packing a very pretty collection of what we call 'rare' Japan conifers for England, and among them there were several varieties of the variegated 'Matsu' pinus. Remembering that in a recent number Mr. Meehan wrote about these pines, I cut a few twigs and send them to you by this same mail.

"Four of them without any label are forms of Pinus densiflora and the fifth, with a label, is Pinus Massoniana. Mr. Meehan said at the time, if I remember aright, that it was rather difficult to distinguish the two species.

"The Japs call P. densiflora 'red pine' and P. Massoniana 'black pine,' and they may readily be distinguished by the color of the young branches. P. Massoniana looks much darker than P. densiflora; besides, P. Massoniana is of heavier appearance, and perhaps not so much branched.

"The twigs will show the difference in the thickness of the young growth, also in the needles. You will note that the golden form of P. Massoniana is much darker yellow than the P. densiflora.

"Of Pinus densiflora quite a number of forms are found here in the gardens and nurseries. One form—dwarf, forming flat heads (helped along by the knife)—is much favored by the Japanese (we call it umbrella pine). There is also a very pretty hanging form which is especially beautiful when grown up to large trees. The drooping habit is quite constant and cuttings always come true. THEO. ECKART."

The above notes from Mr. Eckart are very interesting, as were the specimens of pines referred to, which were received safely. The trouble here has been not so much between P. Massoniana and P. densiflora as between the latter and P. Thunbergiana. The original densiflora in nurseries here is an extremely rapid grower, strong and coarse in its growth, and noticeable for its prominent white terminal buds in Winter. Now we have what we are told is P. densiflora in one also a rapid grower, but not of the sturdy, coarse growth of the other, and without the white buds, more like the samples Mr. Eckart sends. Which would indicate that the one we have, of fine growth, is the true P. densiflora; and the coarser one P. Thunbergiana, probably.

What a paradise of pines and coniferous trees of all kinds Japan must be!

Mr. Eckart has our best thanks for his kindness in sending the notes and samples.

CARNATIONS ROOTED CUTTINGS

NOVELTIES—This Year's Introductions

Mrs. Theodore Roosevelt. A brilliant shade of deep cerise pink, flamed with carmine. Finely formed, average 3 inch flower on strong stiff stems. Habit vigorous, early, free. Fragrance, strong clove. Selected, strong, well-rooted cuttings now ready. $12.00 per 100; $100.00 per 1000.

Alpine Glow. A deep salmon pink on opening, which finishes a bright Daybreak tint. Good sized bloom, averaging 2¾ inches at this season of the year. Flowers of great substance and a splendid keeper and shipper. An extra vigorous grower; early, profuse and continuous bloomer. Cuttings taken last April produce plants carrying 25 to 30 blooms by the first of March. We believe this will prove one of the most profitable of the daybreak colored carnations. We shall have the following rooted cuttings ready for delivery at the dates specified: March 15th, 2,500; March 21st, 5,000; April 5th, 5,000. Price, $8.00 per 100; $75.00 per 1000. Quantity limited to the above.

Lillian Pond 2,000 selected plants from 2 inch pots, ready for immediate delivery, $10.00 per 100.

Her Majesty From 2 inch pots, March 10th to 15th delivery, $10.00 per 100.

Marshall Field From 2 inch pots, March 10th to 15th delivery, $12.00 per 100.

Gov. Lowndes Strong plants from 2 inch pots, for immediate delivery. $12.00 per 100.

Adonis Strong plants from pots, March 10 to 15th delivery. $15.00 per 100.

INTRODUCTIONS 1902

Harry Fenn. Extra strong selected stock, $50.00 per 1000.

Viola Allen. Fine strong cuttings for immediate delivery, $50.00 per 1000.

Stella. $6.00 per 100. $50.00 per 1000.

Challenger. Extra strong stock ready for immediate delivery, $5.00 per 100; $40.00 per 1000.

Mention the Florists' Exchange when writing.

CHANGES IN BUSINESS.

DES PLAINES, ILL.—Julius Fulle has disposed of his greenhouse business here.

KANSAS CITY, MO.—The Wm. L. Rock Flower Co. was incorporated with a capital stock of $50,000. The incorporators are W. L. Rock, C. E. Haite, Louis Westervelt and Lucy B. Rock.

WASHINGTON, PA.—Large greenhouses are to be built on the McBurney farm, about two and a half miles east of Washington, and flower culture will be carried on extensively. The farm contains 42 acres, and has been purchased by a company of local men at $160 an acre. The men interested in the enterprise are J. M. Dickson, Peter Kennedy, W. J. Warrick, Wm. Christman, Ed. Culbertson, Joseph Seaman, John W. Warrick, Todd Culbertson, J. S. Salmons, John M. Wilson, George Warrick, and A. J. Culbertson. J. S. Salmons, a stockholder, a practical flower grower, with experience here and also in other cities, will be at the head of the project, and will live on the place. On the farm is a gas well that will supply fuel for an acre of glass. There is also a deep drilled water well and sand stone quarry, with a 30-foot breast. Small fruit culture will be conducted as a side line.

For Sale or Exchange 50,000 Sen. Dunlap **Strawberry** plants, the best strawberry introduced in ten years, ten other varieties 50 cts. per 100; $3.00 per 1000. THE FLORISTS' EXCHANGE. 2 Duane St., N Y

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, ready for delivery in March, 75c. each; $7.50 per Dozen; $50.00 per 100. Stock limited.

GREAT REDUCTION

On the best list of Cannas ever offered; **50 Varieties,** all different shades; **strong healthy roots. Our Cannas never kept so well. Prices** have been lowered **25 per cent.** to reduce surplus. **This offer good for a short time only. No order accepted** for less than 100 roots, or 10 of a kind, at these prices.

Cincinnati.

Carnation Meeting.

The carnation meeting at the club rooms of the Cincinnati Florists' Society last Saturday claimed most of my attention the past week. To start with, the blooms, as a whole, were of better quality than it has been my pleasure to see for many a day. The principal exhibitors were the Chicago Carnation Co., H. Weber & Son, and our own "Dick." You all know who he is. Before I forget it, I want to say a good word for his Improved Estelle. This is well named. While its color possibly is no better, the flower itself is a decided improvement and contains much more substance. The stem and calyx are all one can desire in a good commercial carnation. A vase of Adonis was certainly grand. It is easily the best scarlet carnation to date. While there are many others on the same order, they have not the bright luster. Enquirer, a vase of which was on exhibition, is very handsome. As a light pink it is hard to beat. The Chicago Carnation Co. had the following staged: Fifty white Polar Queen. This is a new sort which looks promising. It has a fine stiff stem, a good calyx, and a flower which measures about three inches in diameter. Her Majesty, a white with light penciling of pink, is a fine flower. The penciling is so light that it is of no particular objection. As it is a very free bloomer, it is well worth a trial. When I saw Mrs. Potter Palmer last year at Indianapolis I was favorably impressed with it. As it was shown here Saturday, I still hold to the same opinion that it is a good thing. Harlowarden, crimson, is O. K., and I believe it attracted more attention than anything else in the show. Marshal Field is variegated on the order of Mrs Bradt. I think it a beautiful flower, but the buying public only want pink, white and scarlet. They have never taken kindly to crimson in this market. I am inclined to think, however, that when Harlowarden makes its debut here it will sell.

The judges reported: Polar Queen, second prize; Her Majesty, third; Harlowarden, first. Potter Palmer, first, in competition with Estelle; Marshal Field, second, in competition with Prosperity.

I believe H. Weber & Sons had a finer lot of blooms than they ever staged before. I never saw Estelle done better. Although Dick won first, he said in open meeting that Weber & Sons deserved it. Governor Lowndes is certainly a grand flower, and it won the first prize as best white; also the S. A. F. bronze medal. Adonis captured the S. A. F. silver medal. Mrs. Lawson, Genevieve Lord and Prosperity were all choice flowers. The last two named carried away first premiums In the seedling class. Adonis secured first prize; Governor Lowndes, second. Third went to Witterstaetter's No. 822 A, which is a fine scarlet. Mrs. Lawson showed up well here, but, of course, was not as interesting as some others.

Peter Crowe, Utica, N. Y., sent a choice display of Bride and Bridesmaid roses, also a fine plant of Adiantum, all of which was awarded a certificate of merit.

Mrs. E. T. Grave had a vase of President McKinley which, as usual, attracted attention.

Huntsman & Co. exhibited a pink seedling that was creditable.

J. W. Rodgers had a violet display. The prize for best general display was awarded to R. Witterstaetter.

The meeting in the evening was well attended, with the following visitors present: James Hartshorne, Joliet, Ill.; E. T. Grave, Richmond, Ind.; C. H. Kunzman, Louisville, Ky.; Herbert Heller, New Castle, Ind.; Henry Weber, Oakland, Md.; Walter Mott, Jamestown, N. Y.

The discussion of the schedule for the Fall festival was taken up and laid on the table until March 21.

The progressive euchre to be given at the club rooms March 26 promises to be quite a "swell" affair.

E. G. GILLETT.

Pittsburg.

G. & J. W. Ludwig had their stand decorated very prettily in honor of St. Patrick's Day. Green carnation was, as usual, the favorite flower, and quite a number of people still say as they pass the stand that they have never seen green carnations before. From the top of the stand streamers of green tape were gracefully hung, reaching almost to the counter, an electric fan keeping them in motion.

John Bader, accompanied by Mr. Koerbel, of Jeannette, Pa., has left for the East to pick up some novelties for Easter trade.

Superintendent Falconer, of Schenley Park, tendered his resignation to the Director of Public Works, and has accepted the superintendency of the Allegheny Cemetery. Mr. Falconer will likely remain until after the Easter show, and then expects to visit some of the cemeteries throughout the country before he takes his new place about May 1. He has done much to improve our parks, and the work at present is in good shape. Mr. Falconer came to Pittsburg in 1896 and succeeded the late A. W. Bennett as Superintendent of Parks. He is a graduate of Kew Gardens, London. After spending a few years in Texas, where he met Professor Sargent, of Harvard University, he was induced to take the position of superintendent of botanical gardens at Harvard. He remained there for seven or eight years, and then took charge of Charles A. Dana's estates for twelve years, after which he came to Pittsburg. He succeeds John Perring, who retires after being superintendent of the Allegheny Cemetery for almost 30 years.

E. C. REINEMAN.

Buffalo.

Along retail lines a dullness exists, though not extreme. This week some decorating orders for store "openings" have made business for some firms. Flowers are in pleasing supply for all regular needs, and in fine quality. There is no glut, such as usually exists at this time. Carnations are not in overplus.

VIDI.

Newport, R. I.

Easter stock this year is looking very promising. The weather is fine and lilies are in good condition.

F. L. Zeigler, our new seedsman, has a fine lot of large Crimson Rambler coming on finely, also a clean lot of lilies which will be just right for Easter.

Gibson Bros. report exceptionally bad luck with lilies, having had to dump about a thousand owing to disease, but they have a very fine lot of lilac, and an enormous amount of bulbous stock. They have imported some fine specimen Box, both standard and pyramidal.

Mr. Fred Smythe, of Smythe & Wadley, was in town this week, superintending the laying out of an extensive Italian garden for Mr. R. Gambrill on Belvue avenue, which is going to take an enormous quantity of stuff. While in town he purchased the well-known specimen conifers on the J. J. Van Allen estate, and intends shipping them to New Jersey.

Mr. Chas. D. Stark has a fine lot of American Beauty, which will be in full crop for the holidays.

The G. A. Weaver Co. report fine business in seeds; they are making a specialty of dahlias this season, having imported a large quantity from Europe.

T. FIELDHOUSE.

New York.

Market Question.

Spring is here and the time is hand when the plant growers for New York market must have a e in which to sell their goods. So nothing has been accomplished to- d that end. The old Clinton Mar- is falling down, and the Tompkins rket is too small. If there are any er markets available for plant pur- es we are not aware of the fact at writing. The members of the New k Florists Market Association called ther meeting for Friday afternoon discuss the situation, but as the nt will not occur until after this ion goes to press, we cannot report result until next week.

s of the Week.

St. Patrick's Day brought with it good demand for shamrocks and, le there was a fair supply on hand, e was not nearly enough to fill all ers. Some of the East-side store- who had been thoughtful enough repare for this day found the sham- s a bonanza, and sold out in short er. Green carnations were offered sale by many of the Greek florists, peddle their wares on the streets, these dyed flowers were no doubt rofitable venture, as they seemed ell at sight, almost.

he funeral of a once prominent poli- n, which took place at Coney nd on Monday, the 16th, called for geat floral display, and a few of Brooklyn retailers reaped a big vest thereby. James Weir's Sons over a vanload of designs and rles Krombach also furnished a l many.

G. Endtz, representing Endtz, Van & Co., Boskoop, Holland, is in n for a few days, and will shortly e on a Western trip to visit his omers.

here is a rumor abroad that a firm retailers will open a store on 28th et, right in the midst of the whole- district.

Herrmann, florists' supply mer- nt, 34th street, reports a very busy on in all lines of goods handled. cut flower market held in the room ctly under Mr. Herrmann's place till in operation, and indications t to a general increase in growers nding this market again in the near re.

eed & Keller, the florists' supply lers, 25th street, have several new gs they are putting on the market season, notably a pot cover that the same decorative effect as the h Bark Cover. It is called the kine Pot Cover, is a splendid imita- of the real thing, lasts equally , and costs a great deal less. An- r novelty is a satin pot cover, de- ed to meet the ideal of a fastidious e. The material (best grade of n) is fixed on semi-circular hoops that clasp together and form the pot cover. To place on a pot or jardiniere, it is simply unclasped and put around and then fastened again, making the richest-looking pot cover we know of. Still another new thing is what is termed the Link Hanger. The hangers on which the fairy flower vases are used are well known to the trade. This latest hanger is gotten up on the link principle. The support, instead of being a single rod, is composed of a series of links, which, besides holding the flower vases, can, by adding to the links, be made any height or length desired. Bark-covered window boxes and Japanese pot covers are also taking well with the trade. The extension pot support, one of the firm's recent introductions, is meeting with an immense sale; in fact, the factory is continuously behind-hand in filling orders.

Myers Gottlieb is spending a vacation at Hot Spr'..gs, Va.

J. H. Rebstock, of Buffalo, was in town this week.

John Einsel, the well-known buyer for George Stumpp, met with a severe accident on Friday, March 12. He was thrown out of the wagon while turning the corner at 55th street and Fifth avenue, and on being taken to Roosevelt Hospital it was found he had a fractured leg. After remaining in the institution a few days he was well enough to be taken home, and is now improving nicely.

WE HAVE

purchased the following, which must be removed before May 1st.

For immediate shipment we have:

1500 Hydrangea Otaksa, 5 and 6 in. pots, $5.00 per 100.

Wholesale Catalogue of everything in the ROSE and PLANT LINE now ready. Address

THE GOOD & REESE CO., Springfield, Ohio
The Largest Rose Growers in the World.

Washington, D. C.

State of Trade.

Business has been good the past two weeks; flowers are in excellent shape and the cut is heavy by all growers. Potted plants are selling well. Lent has not had much effect on trade so far. Carnations are a little scarce and holding their own in price. Standards realize from 50c. to 75c. per dozen; fancy from $1.00 to $2.00 per dozen. Roses are also plentiful, prices ranging from $1.00 to $9.00 per dozen. Kaiserin Augusta Victoria range from $1.00 to $3.00 per dozen, retail; Bridesmaid 75c. to $3.00 per dozen; Bride, 75c. to $2.00 per dozen; Ivory from $1.00 to $3.00 per dozen; Golden Gate from 50c. to $3.00 per dozen; Liberty from $2.00 to $6.00 per dozen; American Beauty from $2.00 to $9.00 per dozen; Meteor from 50c. to $2.50 per dozen. Lilium Harrisii are still a little scarce; they realize $3.00 per dozen retail.

Bulbous stock, such as daffodils, tulips, hyacinths, go very readily at 50c. and 75c. per dozen. Callas do not go so fast as Harrisii lilies.

Notes.

Munder Bros. expect to cut about 21,000 longiflorum for Easter.

A. Gude & Bro. are cutting a fine lot of roses. They will have a nice lot of azaleas for Easter.

One of the leading market florists was selling fresh violets at 5c. and 10c. a bunch of 50, retail; old ones from 25c. and 35c. per 100, wholesale. C. W. W.

BRIEFS FOR BUSY FLORISTS.

TULIPS AND HYACINTHS.—These plants should be got into the greenhouse now if intended for Easter flowering. Shade them from the sun for a few days, and if the soil in the flats, or pans, shows signs of being infested with worms, give a watering with limewater. One or two applications will rid the soil of the worms. No forcing will be required to have the bulbs flower on time. A house where the temperature goes down to 50 degrees at night will bring them about all right.

ROSES IN POTS.—These should be regularly fed with liquid manure from now on. Another thing that will need looking after is to afford the plants more space on the benches. As the growth develops, they soon get too crowded together, and the first thing one knows the branches on the inne sides of the plants become affected wit mildew, and the shapely plant is gone By spreading out the plants on the benches as they need it, and allowing a free circulation of air around them at all times, they are not so apt to become a prey to mildew.

BOUVARDIAS.—The young stock i almost ready to be taken from the cutting boxes. Potting them into 2½-inc pots is now the right thing to do. Afte potting place them in a rather war house, as they need to be grown alon quite fast in order to make good stoc for planting outdoors when the weathe becomes warm enough.

AZALEAS FOR EASTER

14 to 16 inch, 75 cts. each; 16 to 18 inch, $1.00 eac These are extra large, shapely plants, full of bud.

AZALEA INDICA.

Have two houses 20 x 100 feet full of these choicest and most favorite Easter plants Most of my customers already know that I am agent for a large concern in Ghent (Belgium), O. Vanden Plas; therefore I can offer you plants at first hand and not through the middleman. In the interest of my customers I go there every year if possible and select my stock personally for the American market. **Notice:** My Azaleas as soon as they arrive from abroad are planted in pots and pinched out as often as it is necessary and taken care of all winter, while some florists place their plants in hot-beds or frames without pots until sold.

MME. VAN DER CRUYSSEN is a rare article this Easter, but as a novelty I can offer about 700 (6-in. pots) of the finest middle-sized plants of this variety, and these are the finest you ever laid your eyes on, as round as an apple, covered with buds. Price, 75c., $1.00, $1.25 each. Specimen plants, 10 and 11-in. pots, $4.00 and $5.00 each.

Other choice varieties in double white, we have Niobe, Bernhard Andreas alba and Deutsche Perle. In pink we have Simon Mardner, Dr. Moore, Memorier, D. L. Van Houtte, Paul Weber, etc. In variegated we have Empress of India, Prof. Walters, Vervæneana, and about eighteen more best varieties of all shades and colors, too much to mention. Price 6-in. pots, 60c., 75c., 85c., $1.00 and $1.25 each. Specimens, 7-in. pots, $1.50 and $1.75 each.

AZALEA MOLLIS, a novelty when in bloom, 6-in pots, 60c. and 75c.

SPIRÆA COMPACTA, 6-in. pots, $3.00 per dozen (my own importation, fine, bushy plants).

CINERARIA HYBRIDA (perfect jewels), all shades and colors, full of buds and flowers, 6-in. pots, $3.00 and $4.00 per dozen; specimen plants, $5.00 per dozen, smaller plants, 5 and 6-in. pots, $2.50 per dozen.

DAISIES, white and yellow, 6-in. pots. $3.00 per dozen.

Coal Didn't Bother Us!

We are Headquarters for

Easter Plants

Blooming Easter Week or Before.

I have an immense stock of the finest and choicest in Philadelphia and in such quantities that exceed anything that I have ever offered before. Several new greenhouses have been added to our large establishment, and these, with many hotbeds are devoted to the entire cultivation of Easter plants alone; therefore I will be prepared to fill all orders if sent in time as far as the supply will reach.

LILIUM HARRISII. Have about 2500 of these (H. F. Michell's selected bulbs, 7 x 9, at $120 per 1000); height from 15 in to 36 in., 5 to 12 buds to the plant, at the rate of 10c. per bud. Lilies are scarce, other plants must accompany the order.

HYDRANGEA OTAKSA (pink). Have a large housefull in tip-top condition, better than ever; strong plants, 6 in. pots, $4.00, $5.00, $6.00 to $9.00 per dozen Specimens, 7-in pots, $1.00, $1.25 and $1.50 each (a few white ones at $3.00 per dozen).

BEGONIAS. Pres. Carnot, 5-in. pots, $2.00 per dozen; 6-in. pots, $3.00 per dozen.

BEGONIA Metallica, 6-in. pots, very large and bushy, $4.00 and $5.00 per dozen.

BEGONIA Vernon (dark red), a new variety from Switzerland, 6-in. pots, full of flowers, $3.00 per dozen.

BEGONIA Vernon (dark red), 4-in. pots, $1.50 per dozen.

BEGONIA, Mixed, 4-in. pots, $1.20 to $1.50 per dozen.

HYACINTHS, all named varieties, from first-sized bulbs of my own importation, all fine shades, $10.00 per 100.

TOURNESOL TULIPS (double red and yellow striped), best double Tulips in existence, sell at sight, three bulbs in a 4-in. pot, $1.50 per dozen pots.

DAFFODILS (Von Sion), double-nosed, three bulbs in a 5-in. pot, unusually fine this year, $2.00 per dozen pots.

Mr G. Aschmann has very fine azaleas, hydrangeas, Easter lilies, spiræas, cinerarias, tulips hyacinths and other plants in bloom and bud. We very highly recommend our customers to Mr. Aschmann for fair and reliable business treatment. (Signed) Henry F. Michell, 1018 Market St.

No use talking, Mr. Aschmann has a very fine lot of Easter plants, and I am greatly surprised at the low prices quoted on same. I can recommend Mr. Aschmann to anyone, as I have known him for the past 20 years (Signed) Geo. Huster, head gardener of Girard College, Philadelphia, Pa.

There is nothing too much said in Mr Aschmann's ad; all that is said is true. (Signed) Thomas Logan, head gardener to W. L. Elkins, Ashbourne, Pa.

On account of saving express charges please mention if plants are to be taken out of pots or not.

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere; only 25 minutes' ride from City Hall. Take 13th St. car, or Germantown car, 8th and Market Sts. north to Ontario St., and walk one square east. Cash with order, please.

Money can be sent safely by Express or Postal Money Order, Registered Letter or Draft.

All goods shipped at purchaser's risk.

Worcester, Mass.—H. A. Jones.

The Massachusetts Horticultural Society has a total membership of 883, 694 of whom are life members.

Florists' Clubs and City Surroundings.

The Hartford (Conn.) Florists' Club has set an excellent example to other similar bodies throughout the country in the investigation it had instituted into the condition of the street trees of the city, which work was placed in the hands of a committee of the club's members. This committee has now made an exhaustive report, intelligently and ably handled, recommending certain necessary changes, as well as suggesting that a forestry department be created, with a sufficient yearly appropriation to develop and maintain the tree planting along all highways in an efficient and practical manner, that said department should be under the jurisdiction of proper authorities, and should be clothed with sufficient power to carry on its work after a uniform and systematic plan.

An interesting portion of the committee's report is the list of trees specified as being best adapted to city conditions; and from that part of the report we make the following extract:

> The ailanthus is pre-eminently the tree which stands more adverse city conditions than any other. Smoke and gas do not seem to affect it, apparently no insects attack it, and it will live and grow in a dry location amid asphalt and other pavements. Although for beauty it is not of the first order, it ought for the foregoing reasons, to be quite extensively used. Others similarly constituted are the cottonwood, white poplar, and some forms of willow. Next are the European linden and the English elm, both of which are tougher in this respect than the American species. All things considered, the best tree for the semi-urban and the suburban parts of a city, where it will have enough room, and where the soil is at least fairly good, is the American elm. Its advantages are a high but not too dense shade, the ease with which wires can be passed through its branches, its rapidity of growth, and the beautiful gothic way in which its limbs overarch a street. Its disadvantages are its lateness in putting out its leaves, its habit of shedding them continuously from about the middle of the Summer onward, its earliness in losing them altogether, and its liability to attack by the elm leaf beetle. Although the habitat of the American elm is a moist locality, it does well even if planted where the ground is somewhat dry, seemingly having the power to send its roots a great distance in quest of water. The English elm, however, has proven in other cities to adapt itself much better to unfavorable city conditions, such as smoke and gas, and excessive drainage of the soil. It also holds its leaves during a longer period. Its worst fault is its greater attractiveness for the elm leaf beetle than even the American elm. Nevertheless, it can be highly recommended as a street tree for the city of Hartford.
>
> Some other trees for the suburban portions of the city are red, scarlet, black, and pin oaks, horse chestnuts, hackberry, silver and red maples, and black walnut. Of all the trees frequently planted, the rock maple is probably the worst, although as a park tree it is one of the first merit. It is one of the first trees to succumb to urban conditions as the city reaches out into the country. If it is planted thickly along a street, and thrives, its shade is too dense. The smallness and multitude of its branches make it difficult to treat it to allow telephone wires to pass through. Linemen say that it is absolutely essential that not the least twig be allowed to touch such wires. In order to prevent this in the case of the rock maple there is no other way than to cut a great hole in the heart of the mass of branches, and this, if left to the average linemen, usually results in ugly and injurious mutilation. If used at all as a street tree it ought to be planted only sparingly on the side streets of the more rural portions of the city. The Norway maple is often planted, and stands city conditions quite well, but it has some of the objectionable features of the rock maple, namely, the denseness of its shade, and its branchiness, and consequent unsuitableness for electric wires. Judging from the somewhat limited data furnished by experience in other cities, the gingko promises well as a street tree. It is to be hoped that a trial will be made of it in Hartford.

The committee was composed of the following gentlemen, and they certainly deserve much credit for the workmanlike treatment given the subject entrusted to them: Theodore Wirth, chairman; G. A. Parker, Robert Karlstrom, Hans J. Roehler and J. Wesson Phillips.

A Severely Serious Society.

An agricultural paper, in a recent issue, holds up the Western New York Horticultural Society as a model of a business society among similar bodies organized for educational aims and objects. The journal in question says: "The attendance regularly overruns the five hundred mark by a good deal, and any member who comes an hour later than the time set for the opening of the meeting invariably finds that he has already missed some important talk and discussion. No time is consumed with lengthy devotional exercises, with addresses of welcome and responses. There is no display of oratory, of wit, or humor, which is intended to amuse the crowd, rather than for instruction and elevation, and no music. There is nothing except that which applies directly to the furtherance of the serious aims and objects of the society. In these respects it differs from many meetings of farmers and fruit-growers, and its example could be followed with benefit."

Yet we have a faint recollection of the seriousness of this serious society having once been broken, not long ago, by a most humorous debate on the nursery fumigation question, or something of that nature.

BOOKS AND PAMPHLETS RECEIVED.

F. B. Vandegrift & Co., New York, have issued their Digest of the Dingley Tariff Law, revised to July 1, 1902. The work is in the form of a pocket edition. Besides containing the text of the tariff, together with the different rates of duty charged on importations, it gives clear and concise instructions on getting goods through the custom house.

BUDDING THE PECAN, by George W. Oliver, Expert, Seed and Plant Introduction and Distribution, Department of Agriculture, Washington, D. C., Bulletin No. 30.

In this bulletin, in which the contents are accompanied with several explanatory plates, Mr. Oliver goes thoroughly into the subject of the propagation of the pecan by budding and otherwise, and presents an improved method by which the work of budding can be very successfully done It is as follows:

> For the reception of the bud make two transverse cuts in the bark of the seedling stock a few inches above the ground line, these two cuts, about one inch apart, to be connected by a longitudinal incision. The bark at each side of the longitudinal cut is then raised far enough to admit of the insertion of the section of bark on which the bud is situated. The rectangular section of bark when prepared for insertion must be of exactly the same length as the cut in the stock. It is taken from the stick of buds by making two transverse cuts through the bark at equal distances from the bud. Two longitudinal cuts are then made through the bark, leaving the bud in the center of the patch, which should be a little over one inch long and five-eighths of an inch wide. The patch must be raised carefully from the bud stick to guard against breaking and with as little bending during the operation as possible. When the operator finds that he does not succeed at the first trial, it will be advisable to practice for a time on wood which is of no value. The stick of buds should be grasped firmly in the left hand, with the knife held by the fingers of the right, the thumb resting on the bud stick. Insert the point of the knife at one end of one of the longitudinal cuts, pressing the blade toward the thumb; this pressure will start the bark. Next insert the end of the handle of the knife, gradually removing the section. The patch is prepared for insertion by first cutting the two ends as straight as possible, using a very sharp knife. The outer bark at the sides is then shaved off, so that the edges will make a perfect fit when under the bark of the stock. When the bud is securely in place, the two wings of bark on the stock are bound firmly over the bud section with raffia, and, as a preventive against the admission of water during the process of uniting, a little soft grafting wax may be smeared across the upper transverse cut and the whole wrapped with a narrow strip of waxed cloth. The wrapping should be started at the bottom, each wrap being half covered by the succeeding one; this will effectually keep out moisture during wet weather. As a protection against the heat of the sun, strips of paper, 8 inches long by 6 inches wide, should be tied around the stem of the stock an inch or two above the bud, but covering it, allowing the bottom part to remain open. After the sixth day the paper covering should be removed, and after the tenth day the waxed cloth may be taken off. By the fifteenth day the buds will have united sufficiently to allow of the removal of the raffia. This method of budding will be found to give an exceedingly satisfactory union. Experience has shown that with carefully selected buds from 1-year-old wood and healthy, vigorous growing seedling stocks, every section of bark will unite.

SILKWORM FOOD PLANTS; also by Mr. Oliver, Bulletin No. 34 of the same division, treats on the cultivation and propagation of various mulberry trees, as well as of the osage orange.

The work, in both instances, has been well done, and the two bulletins will be found of greatest service to all interested in the subjects dealt with.

Obituary

Mr. and Mrs. David Foulis.

It is with regret that we record this week the deaths of Mr. and Mrs. David Foulis at their residence, 260 West 115th street. Mr. Foulis contracted a severe cold which developed into pleurisy and after but a short illness died on Monday, the 16th inst. His wife, Elizabeth A. W. Foulis, who had been an invalid for some time, took to her bed when Mr. Foulis became ill, and lay in a comatose state for a week, dying the day following that of the death of her husband. The funeral services over husband and wife were held in the Fourth Presbyterian Church, Thursday, the 19th inst., at 1 p.m. Three sons and two daughters are left to mourn their loss. Mr. Foulis was about 70 years of age, and had followed the gardening profession all his life.

David Foulis was born at Fordell, near Inverkeithing, Fifeshire, Scotland, August 9, 1834. His father was gardener at that place for over fifty years, and it was there that the son served the apprenticeship considered necessary for the making of a Scotch gardener. Later, as a journeyman, he served at Largo House, Scotland, the Royal Botanical Gardens at Kew, and Trentham Hall, England. While at the latter place he was engaged by the late Mr. Edwin Hoyt, of Astoria, L. I., and came to this country in October, 1861. In 1863 he started in the retail florist business as a member of the firm of Beattie & Foulis at 925 Broadway, and later for himself at 1482 Broadway, where he remained until 1891.

Five years ago, Mr. Foulis took the position of landscape superintendent for Alex. McConnell, the Fifth avenue florist, which position he retained until his death. During the Summer of 1902 he was in charge of the improvements (under Mr. McConnell) at Georgian Court, the palatial home of George J. Gould, Lakewood, N. J.

Besides being an all-round practical gardener, Mr. Foulis had a taste for literary work, and often wrote interesting articles on horticultural topics. He was also a lover of his native country's sports, and never missed an opportunity of participating in the curling games that occurred in or near this vicinity. He was a man of strict integrity, respected and honored by all who knew him.

Hugh Graham.

Hugh Graham died at his home at Logan, Philadelphia, on Saturday last, after one week's illness with pneumonia. He was 71 years old. Born in Ireland, he came to this country when young. In early life he was chiefly interested in the dry goods and clothing business. His first start in the florist business was at 18th and Thompson streets, where he bought out the business of Joseph McMurray. As the ground was sold off for building, other property was acquired at Logan and greenhouses erected. In the eighties he moved down town, going into partnership with Mr. Gregg, at 1204 Chestnut street, later buying out this interest. The firm was known as Hugh Graham & Son. About six years ago the business was moved to 104 South 13th street, where the business is now being conducted on a very large scale, including all the principal decorating work for the large balls, etc., this using up the entire product of the large establishment at Logan. Two sons, William and Hugh J., have been for many years associated with their father in the business. DAVID RUST.

The Special Spring Trade Edition of the FLORISTS' EXCHANGE will be issued next Saturday

Your advertisement in that number will be seen and read by practically every Florist, Seedsman and Nurseryman throughout the country whose trade is desirable. Results are, therefore, conclusively assured. Send in your advertisement. No increase in advertising rates.

New Advertisements can be received to 5 P. M., Thursday, March 26.

Changes of advertisements must be in hand not later than Wednesday, March 25.

THE FLORISTS' EXCHANGE
2 Duane St., New York

Reflections on Current Topics.

ſr. Editor: These are the days of enuous soliciting of advertising busis by the trade press. Three special tions in view, each one claiming to the thing; and all after your ad. It lifficult to decide how to allot one's siness into aliquot parts; still give solicitors satisfaction, and bring k to yourself what you and they are er—the almighty dollar.

dvertising business, unlike kissing, uld go by results received and not favor. Not having stock in any of publishing companies distributing de literature, I adopt the former n, and place my advertising where does me the most good—in The rists' Exchange.

ut it was more on the methods of strenuous solicitor than otherwise t I desired to write at this time. t long ago I received from one of t fraternity a missive somewhat as ows: "Dear Job: I read your icles in the Exchange with pleasure. m glad to know your own health l that of the baby is at par. Don't get the Weekly in your advertising." w, apart from palaver, poetry and traits, that's about the most apling solicitous solicitation that has reached me. After that reference baby I could hardly resist the reest. But I did.

nother one, more of the brazen racter, reads as follows: "Why do discriminate against us in the matof advertising space? You give New York contemporary just uble what you give us. That's not ht. Don't we do as much for you as y? Do you forget that we recently blished the picture of your new cartion?" My answer to this is found the introductory remarks herewith. 'hat leads me to reflect as to how ich a trade paper does for me; ether I am under obligation to it references to my varieties exhibited, unsolicited articles setting forth the w things and good old ones that ve appeared at my place! I have alys believed that the business of a de paper was to give its readers all "news" that would tend in any way help such readers; and that my siness was to run my business as st suited myself to my own advange. But it seems I don't know the first principles of business, and have a lot to learn yet.

⁂

Then there's the matter of rates. Cheap advertising, like cheap articles of any kind, always betokens inferiority. When a man pays a small price for his advertising he should not grumble if his returns from it are correspondingly small. Some friends of mine have been fortunate enough to have their offerings presented "free" in a certain medium; but they tell me the price charged is commensurate with the returns received. The advertiser is after results; the first cost is a secondary consideration, if the advertising pays. That is why I don't object to pony up what you demand.

The old express rate on cut flowers has, I am pleased to notice, been restored. An amusing feature connected with this restoration is the number of agencies arrogating to themselves the credit for having done the job. Probably the withdrawal of business from the companies has been the strongest factor in the case, proving once more that individual effort has an especial value. I read not long ago where some of the shippers forgot to mark "Fresh Cut Flowers" on their boxes, which were forwarded as containing ordinary merchandise not within the "plan and scope" of the higher rate. It's a smart institution that can get on behind the florist. Sure enough, "there's tricks in all trades, but ours."

I may, with your permission, again refer to the peony matter next week, or in the near future. Meantime keep your eye on JOB.

American Rose Society.

The annual meeting of this society will be held in Horticultural Hall, Philadelphia, on Wednesday, March 25, at 2 p.m., when the usual routine of business will be transacted.

Prof. L. C. Corbett will address the meeting on the subject of "Propagating Roses from Flowering or Blind Wood." Mr. E. G. Hill will submit a report on "New Roses," and an address on the "Rose Society and Its Work" will be presented by Mr. Robert Craig. There is considerable local interest in the exhibition, and it is felt that the Philadelphia show will take on a character entirely different from what has been seen in previous efforts in New York City.

How to Care for Evergreens.

Paper read by Joseph Hurley, Gardener to James W. Paul, Jr., Esq., Radnor, Pa., before the Pennsylvania Horticultural Society.

Evergreens as soon as received should be heeled-in immediately. A great mistake, in my judgment, is frequently made in having the holes dug in advance of the arrival of the trees, but the anxiety of the gardener to get the job off his hands naturally inspires him to be prepared to plant the trees as soon as they arrive; and, as frequently happens, the planting takes more time than he calculated on, and the results are that the trees are lying on the ground from perhaps four to six hours before they are all planted, exposed to the prevailing dry winds of either Autumn or Spring.

Now there is one point that I would like to call especial attention to, which I think is not sufficiently well understood by most persons, and that is, the reason why an evergreen cannot stand getting even partially dry, as the deciduous trees can, from the fact that the sap of the evergreen is of a resinous nature, and after once becoming dry it can never be brought back to its normal condition no matter how you water it or care for it afterward. Whereas, if most deciduous trees become somewhat dried out they can be brought back to a normal condition by soaking the roots, or if necessity requires it, even burying the whole tree, roots and branches, in the ground for a week or ten days, and unless the roots have been entirely dried out before burying the tree, you will find your tree come up out of its grave ready to start to grow.

Half an hour of exposure to a hot sun, or a drying wind, is often sufficient to dry out the roots of an evergreen; notwithstanding it may have the best of the gardener's care in planting and ample watering after it is planted, it will eventually die. And while the water question is in my mind, if there is any one thing that causes more failures (other than allowing roots to dry out), it is that of puddling roots before planting; as a rule, those who puddle do not water afterwards, hence in the course of a few days the dry earth coming in contact with the damp puddled roots absorbs all the moisture and leaves only a few hard dry balls of earth that had adhered to the roots for the young roots to start in.

How to Plant.

Assuming that you have had your trees heeled-in, of course you would be naturally familiar with the size of the balls, and, therefore, could judge accurately the size of the hole required for each tree. But it is always wise in digging holes for trees, if you err at all, to err on the side of having the hole both deep and wide, and in low or filled-in ground. It is always advisable to fill in the bottom of the hole with eight or ten inches of broken stone, for if there is anything that an evergreen detests it is water lying around the roots. Where such conditions prevail and where artificial drainage is not provided for, the tree may survive for a few months, then sicken, take on that yellow appearance, called tree consumption, and die. Dig around the roots of one of those trees which I have just described and what will you find? All the underneath roots black, sour, rotten. The tree is existing on the few little white roots which the trunk is sending out just at the grade level where the air has kept the soil sweet and pure; these few young roots sustain life for awhile, but in the end the result in death.

In planting, be sure you do not plant any deeper in the ground than the trees were growing in the nursery row. This can be readily seen by a ring around the tree showing the dirt mark. Throw your rammer across the hole, sight it with your eye and if the lower part of your rammer is level with the former dirt mark on your tree, then you are ready for planting.

Now for a willing rammer and a lazy shoveler; and my experience has taught me that it is wise to use two men ramming to one shoveling. It is very prudent and wise after the tree has been set in position to tie up all the lower branches with a rope; this will prevent them from getting injured with either the rammer or shovel.

If your trees have not come to you bagged and with a good ball of earth (and I would not buy an evergreen tree of any nurseryman who would not send his trees so bagged), then I would consider it a very wise plan to spread out the roots as the hole is being filled in, so as to get them in as near the same position as they were before the removal of the tree from the nursery (but keep your eye on the rammer, never mind the fellow with the shovel). Make the rammer ram and ram and ram, but look out that he doesn't get his rammer too close to the trunk of the tree and ram off the young fibrous roots that the tree has to depend on to make it a joy forever.

Never fill in the soil level at first; leave room for water. Have a man follow the planters with the hose, and if not convenient to a hydrant, then use the garden watering barrel, giving to each tree planted from eight to ten quarts of water. Give them a similar supply of water as soon as the first watering has soaked through, and when the second watering has soaked in, then you are ready to put in the balance of your soil, and the tree is planted.

Care After Planting

Having planted the tree, the next thing to do is to mulch it with manure, leaves or any other kind of litter that will help keep the moisture around the roots. Under no circumstances, no matter how dry the weather may be, should any more water be given to the roots, but that does not mean that the tree can survive through a protracted hot, dry spell. We have another method in hot or drying winds of supplying moisture, and that is, syringing. Syringe morning, noon and night; syringe Sunday as well as on week days; syringe the foliage as often as you can; syringe it whenever you can. If you cannot reach your evergreens with the hose, go around among them with the bucket and the little greenhouse syringe. No matter when you plant, Spring or Fall, keep the syringe going until Thanksgiving.

These are the methods which I adopt, and I have planted more than five thousand evergreens within the past two years, and our percentage of loss has not been over two and one-half.

MAGNOLIA STELLATA.

Flowering and Ornamental Shrubs for the North.

Paper read before the Montreal Gardeners' and Florists' Club, by P. J. D'arcy, Manager Eastern Township Nursery Company.

In compliance with your request for some notes on flowering shrubs suitable for this locality, I will mention but a few, and most of these will be old favorites; but they will have the merit of being perfectly hardy and suited to the positions for which they are recommended. They can be seen at any time growing in our nursery at Cartierville, Que.

The dwarf double-flowered almonds, both the pink and the white varieties, are among our very earliest flowering shrubs, and are very desirable varieties.

The purple barberry, Berberis purpurea, is a very handsome shrub growing about 5 feet in height; its violet-purple leaves and fruit make it a very desirable variety, especially for hedges.

B. Thunbergii, with its fine foliage and low dense habit of growth, does best planted in a shrubbery border where it will get plenty of sun, this being necessary to bring out the blood-red color of its foliage to perfection. B. ilicifolia, the holly-leaved barberry, known to some of you, no doubt, as Mahonia aquifolium, a low spreading shrub, well adapted to growing in the shade. It flourishes even where grass will not grow. Many an unsightly spot could be transformed by planting a few of this beautiful evergreen shrub.

For anyone with a sheltered position Deutzia crenata fl. pl., with its beautiful white flowers, will be a source of continued delight. The golden elder, Sambucus aurea, given a sheltered and sunny position, and planted in well prepared soil, will far more than repay any trouble you have had in preparing a place for it. As it often makes a growth of 4 or 5 feet in a season, it needs a severe pruning, but this is best done in the Spring, as some of its young growths are often Winter-killed.

The bright-red bark of Cornus sanguinea, dogwood, should secure it a place in every collection. It is a very attractive object during the Winter months, when so little natural color is seen. It does best planted in a sunny position.

Euonymus europæus is a large growing shrub that holds its berries until late in the Winter. This also does best planted in a sheltered position, with plenty of sun.

The purple-leaved filbert (Corylus Avellana atropurpurea) is one of our best purple-leaved shrubs; it retains its color throughout the entire season.

Prunus Pissardi (the purple-leaved plum) is an other shrub worth planting. It grows 8 to 10 feet high, and is equally adapted as a specimen for the lawn or the background of shrubs. The foliage on the young growths is the best colored, so that a severe pruning is advisable.

The purple fringe, or smoke tree (Rhus cotinus), a very elegant ornamental shrub; a fine specimen covered with its curious hair-like flowers, of a pinkish-brown color; is not easily forgotten.

Viburnum opulus fl. pl. (the snowball) is, I consider, the only one of this family worth planting here, or at least that is the only variety I have found hardy at present. I have several new varieties under trial and may be able to make a more favorable report in the Spring.

The snowberry (Symphoricarpus racemosus) is so well known that it is needless for me to comment further on it.

The deciduous spiræas are so common that you may not care to hear of them, but I have a few new ones I would like to mention: One great feature in the spiræas is, that they can be arranged in collections to give a succession of bloom all Summer. S. Van Houtteii is one that cannot be easily beaten. S. Anthony Waterer can be kept in bloom all Summer by removing the flower-heads before they go to seed. S. Bumalda is a beautiful pink, a little lighter than S. A. Waterer, but given the same treatment it will be equally as satisfactory. S. Billardi, with its rose-colored bloom, is a beautiful sight. S. callosa alba is a good companion for S. Anthony Waterer. S. prunifolia fl. pl., or bridal wreath, is most desirable. Planted by the side of a clump of the double pink-flowered almond, its wealth of pure white, double, daisy-like flowers form a beautiful contrast, and are the more appreciated as the snow has hardly left the ground and nature is still sere and brown. S. Douglasii, another rose-colored variety, flowers in July and August. It should be planted as a companion to S. salicifolia; the bright rose-colored flowers of the former and the white ones of the latter blend very harmoniously. S. paniculata rosea, growing about 2½ feet high, flowers from July until killed by the frost. I have many more spiræas that are perfectly hardy, such as S. foliis aureis, the golden-leaved spiræa, S. opulifolia, S. atrosanguinea. S. Reevesii; but these, with many other desirable species and varieties of flowering and ornamental shrubs, I must leave until some future date.

Magnolia Stellata.

Though this magnolia is properly stellata, it gained wide popularity under the name of Halliana; indeed, it is to be found catalogued under this name to-day in some lists. It is one of the loveliest of all, valued greatly for its earliness as well as for the excellence of its flowers. There is no other one flowers before it in Spring. Just as soon as frost is out of the ground it is in flower. The branches nearest the ground expand first, being warmer there than higher up. It will be noticed that the top buds are not expanded as are the lower ones. The flowers are pink in the bud, almost white when open, there being but a faint tint of pink then. Then they are semi-double, fringed and fragrant, a combination of good things accorded no other magnolia. When the plant shown in the illustration was young it had been used for layering purposes, otherwise there would have been more branches near the ground than there are; but we are making no apology for it; it's a beauty.

JOSEPH MEEHAN.

QUESTION BOX

Stocks.

(69) K. S.—The stocks are evidently growing too close together and are becoming drawn. The scalding of the foliage has, no doubt, been brought about by sprinkling the plants overhead, on some bright day, while they were dry at the roots. They should outgrow the trouble in a short time.

Hydrocyanic Acid Gas.

(69) How much hydrocyanic acid gas should be used to fumigate two houses 80x35 feet (two at 17½ feet) five feet to sides open as one? Would the gas have to be placed at more than one point to fumigate the houses? Will the gas injure such plants as spiræas, ferns, etc.? GLOVERSVILLE.

—The question from Gloversville, N. Y., asking how much hydrocyanic gas should be used to fumigate two houses 80x35 feet, opening as one, and would the gas have to be placed in more than one place, is at hand. I cannot determine the exact amount of cyanide of potash to use, as the dimensions of the houses are not complete. I would have to know the height of the ridge and the length of the sash bars in order to figure this out. It can be very easily figured, however, and the cyanide of potash may be used at the rate of half an ounce to 100 cubic feet of air space. The gas should be left in the house from 20 to 30 minutes; the foliage should be perfectly dry, and the work should be done after dark.

The writer should send to the Department of Agriculture for a copy of Circular No. 37, describing in full this process; or should consult previous numbers of The Florists' Exchange. A complete account of the methods is also given in Mr. Galloway's book entitled Violet Culture, and Johnson's Fumigating Methods. Jars should be about 25 feet apart for generating the gas.

Both the gas and cyanide of potassium are extremely poisonous and must be used with caution. Violets, ferns, coleus and related foliage plants can all be fumigated. The amount given above is for double violets. In using the gas on foliage plants or ferns, one-third less of the cyanide per 100 feet should be used, and the time of exposure should be reduced to 20 minutes.

A. F. WOODS,
Pathologist and Physiologist.

Construction and Heating.

(70) We intend putting up three new houses each 19x75 feet and would like some information in regard to constructing and heating same. The houses are to be three-quarter span, run east and west and to be connected. We would like to know how much fall the gutter should have and how wide it should be. What size boiler we should use and location, number and size of flows and returns? (We intend using hot water for heating.) We wish to locate the heater at the northwest corner of the houses and if possible, use our large storage tank as an expansion tank. This is near the northwest corner. The north house is to be used for growing roses; the other two for carnations. The ridges of the houses will be eleven feet high and outside wall boarded up about 4½ feet, except the south side of the south house, which will have a line of 18-inch glass just under the wall plate; 16x18 D. S. A. glass will be used. H. & S.

—It will be well to have the gutters about ten inches wide inside and give them a fall of from six to nine inches. The boiler should be one rated for two thousand feet of radiation, or if a steam boiler is used, it should be about 20 horse power. The rose house can be heated with twelve two-inch pipes. It will be well to have at least four of them flow pipes. Ten pipes will be desirable for the carnation houses, although nine would answer in the middle house with some varieties. The large storage tank will answer as an expansion tank, but care must be taken that the pipe leading to it does not freeze. L. R. TAFT.

(71) Kindly advise how to make a coil boiler, size of pipe, etc., for 500 feet of radiation, thermometer 0°, inside temperature 70°, to be used for dwelling. Is coil to be covered with fire? What kind of grate should be used? About how much would such a boiler cost? SUBSCRIBER.

—For 500 square feet of radiation it will be desirable to have about 50 square feet of fire surface. This will take about 75 feet of two-inch pipe in addition to the fittings. The boiler can be made of four coils containing four pipes each. It will be best to make the coils L-shaped to allow for expansion. Set the coil and brick it in the same as a tubular boiler, exposing all parts to the fire. Use a rocking grate about two feet square, and a ten-inch smoke pipe. The cost will be about $75.00.

L. R. TAFT.

VIBURNUM OPULUS.

Photographed Feb. 28, 1903, at Establishment of Endtz, Van Nes & Co., Boskoop, Holland.

See Page 320.

(72) I desire to put in hot-water system in my greenhouses. Having four square feet of grate surface, what should be the dimension of chimney for same? Also, will one two-inch flow pipe feed eight 1¼-inch pipes in house 75 feet long? J. C. F.

—For a grate containing four square feet the chimney should have an area of 100 square inches, or say 8x12 inches, and a height of about 25 feet, although this would be modified by the lay of the land and the height of the surrounding buildings. If two-inch pipe is used for the flow, two will be needed; one 2½-inch pipe would answer.

L. R. TAFT.

(73) Would like to ask a few questions on changing my heating from steam to hot water. The two houses are 125 feet long by 30 feet wide each, glass ends and glass on south side of one house 24 inches deep. Both houses open into one another. I have a three-inch main leading from boiler overhead to extreme end of each house, reducing to 2½ into headers—one coil of 1¼ pipes on both sides, 6 pipes in each, four other coils of four pipes in each two in each house, or three in each, with outside coils. What temperature should that heat to at 15 below zero outside with steam and what temperature will that heat with hot water when changed? I have a three-inch hole in boiler for steam. Will that be large enough to connect a five-inch pipe to for return, or will I have to cut the hole to fit the five-inch pipe? A CANUCK.

—The houses are too long to get satisfactory results with hot water through 1¼-inch returns, and if used at all it should be as a closed system. In that way it might be possible to maintain fifty degrees, but even for that temperature it will be best to run another three-inch flow pipe. The present radiation should give sixty degrees with steam. While it is best to have the openings to the boiler the full size of the flow and return pipes it will answer if five-inch mains are used to connect to the present openings by means of reducers. The present arrangement seems very well adjusted for steam, and should give better results than are likely to be obtained with hot water in such small pipes. L. R. TAFT.

(74) What is the best way to make a water tube boiler for hot water? How many feet in length of two-inch pipe would it take to make a boiler large enough to heat a house 110 feet long and 16 feet wide to a temperature of 50 to 54 degrees at night? Also how large a grate surface would be required? I cannot put the boiler in a pit on account of water near the surface of the ground. Neither can I have a high boiler (not more than two feet from grate) as I have to connect the flow pipes from the new boiler to the flows already in use. If I have a high boiler I shall have to rearrange all my piping, some of which is four-inch cast iron pipe. I don't want to disturb these, if possible to connect a new boiler, without doing so.

METHUEN.

—By allowing eighteen inches between the grate and the bottom of the coils it will be possible to build a boiler with two pipes in each coil that will satisfy the requirements. It will not be as economical in fuel as a boiler with four pipes in each coil. About one hundred feet of two-inch pipe will be desirable for the coil and with two pipes in each coil it will be necessary to use either six coils eight feet long or eight coils six feet in length. The grate should be about 2x2½ feet, and the smoke pipe ten inches in diameter.

L. R. TAFT.

(75) What is the best way to set hot water pipes so as to heat two small greenhouses? One house 14x20 I wish to heat at 50 to 55 degrees and the house 10½x30 to a temperature of 40 to 45 degrees. Temperature outside seldom goes to zero. The highest point above level of cellar is about 11 to 12 feet. The 14x20 house is well protected on north by residence and workroom. The 10½x30 house is fully exposed, but is well built with wall double boarded. I want to use 1½-inch or 2-inch pipes. I wish to place boiler in cellar of residence, as there is a good chimney for the boiler. JOS. HALLE.

—The 14x20 house will need about 100 square feet of radiation, which will take 200 feet of 1½-inch pipe, or 161 feet of 2-inch pipe. It will be best to arrange it in coils around the walls with a 2-inch flow and return pipe for each coil. The other house will need about one-half more radiation.

L. R. TAFT.

(76) Will you please say how and with what material the best way to pack joints of 3-inch pipe (boiler tubes) and cast T's and elbows for use in hot water heating in greenhouse? I have one house in which I have, or am trying to use up, a lot of boiler tubes for this purpose, and am having trouble to keep the joints from leaking. The pipe is plain, no collar on the end like soil pipe or cast pipe, and am using a 4-inch hub with ring inside for the 3-inch pipe to meet against. Y. Z.

—It is difficult to make a joint that will not loosen when there is no collar on the pipes. It helps some if the ends of the pipes are swagged so as to make a slight shoulder to keep the packing from slipping off. Oakum or small rope can be used for packing the joints. Put in enough to fill one-fourth the space in the hub and caulk firmly. Then take Portland cement and mix thoroughly with two parts of sharp sand and moisten slightly. Put in a layer of this, then another of rope or oakum, and finish up with a layer of cement. If the cement is kept moist so that it will not set too quickly it will make a good joint. Iron putty can be used in place of the cement. To prevent the pulling apart of the joints when the pipe cools it should be supported on rollers made from pieces of gas pipe.

L. R. TAFT.

Japanese Notes.

Mr. Foukouba, the director of the Imperial Gardens, states that the Japanese Government has decided to participate at the St. Louis exposition with an important display of Japanese horticulture. Several plans are now under consideration, but the exhibit will likely consist of a Japanese landscape, with some especially selected dwarf trees. Mr. Foukouba will be commissioned to represent the Japanese Government, with probably other gentlemen as assistants. The florists of the United States will meet in Mr. Foukouba a most charming Japanese gentleman, and one who has very profound knowledge of gardening generally.

It may interest some of your nurserymen readers, and forest planters, that the Japanese larch is being introduced in England and on the continent in large quantities. L. Boehmer & Co. alone shipped over 1,000 pounds last year, and but for the failure of the crop would have shipped 1,500 pounds this Winter.

This larix is of quick growth especially in the young state. English plantsmen report that four feet is not uncommon for a year's growth; here the growth even excels that. British planters have resorted to the Japanese larch because the English larch is rather severely affected with a disease which the Japanese variety has, so far, escaped. The tree is one of the hardiest of Japan, growing at an altitude of 3,000 to 5,000 feet in the middle and northern part of Nippon. It has been planted in Hokaido and there also grows well.

Two distinct types are found, one not so high (40 to 50 feet) with rather spreading branches, while the other, growing 80 to 90 feet high has a somewhat more upright growth. T. E.

S. A. F. O. H. Executive Committee Meeting.

En Route to Milwaukee.

The Eastern and Western contingents of the executive committee of the S. A. F. centered in Chicago on Monday and were hospitably received and royally entertained by the brethren of that city. From the East came Messrs. President Burton, Secretary Stewart, George C. Watson and Alex. Wallace. Mr. Tesson came along from St. Louis. The visitors were tendered an informal banquet at the Auditorium Monday night. The tables were beautifully decorated by Mr. Hauswirth, who, by the way, is getting his new store into nice working shape, and will soon have a model shop of its kind. Among the flowers, Mr. Rudd's new carnation Phyllis was very conspicuous. The evening passed with song and story. Every one present contributed to the enjoyment in one form or another. Mr. Rudd was particularly eloquent, and Messrs. Coatesworth and Foley ably supported him. Mr. Hauswirth, always genial and hospitable, made an able plea on behalf of sports at this convention, and predicted the best kind of a bowling contest next August. Other speakers were Messrs. Vaughan, Burton, Stewart, Watson, Benthey, Johnstone, Barker and Kanst. Mr. Tesson told of the St. Louis Exposition, regarding which, he said, there were some doubts as to whether the work would be sufficiently far advanced in 1904 to extend an invitation to the S. A. F. to visit St. Louis, and incidentally take in the exposition next year. Songs were rendered by Messrs. Carter and Wallace, and Mr. Woodruff proved a first-class character impersonator. The affair broke up at an early hour.

In Milwaukee.

The executive committee met here this (Tuesday) morning, March 17. The members were accompanied from Chicago by Messrs. J. C. Vaughan and Phil. Hauswirth.

The craftsmen in the Cream City are making preparations for and expect to have the largest attendance in the history of the S. A. F., and indications point to the fact of their hopes being realized. It is likely that the Exposition Building will be selected as the meeting place, and for the trade exhibit. This is a spacious structure and will provide most ample accommodation for a grand display of the products and accessories of the business in August next. Inquiries for space are already arriving, and large though the building is, there is reason to believe it will be none too big.

This is a great bowling center. The building where the contest in August next will, it is expected, take place, has some 16 alleys, eight on each of two floors; and during convention time it is thought both floors can be secured for the bowling match. This will greatly facilitate the progress of the games, and lessen the time to complete the contest.

On Tuesday evening the members of the executive committee were the guests of the Milwaukee Florists' Club at an informal dinner in the Hotel Pfister, after which the diners adjourned to the alleys, where one game of ten pins was rolled, with the following result:

J. C. Vaughan	105

Viburnum Opulus.

The plant of Viburnum opulus shown in the illustration demonstrates that this subject can be forced readily, and would make a very useful Easter plant. The photograph was taken February 28, 1903, seven weeks after it was started into growth. We are indebted to Messrs. Endtz, Van Nes & Co., Boskoop, Holland, for the photograph.

The Summer Flower Garden.

Read by Francis Canning before the Philadelphia Farmers' Institute.

From time immemorial the flower garden has been considered an indispensable adjunct to the home. It has stepped hand in hand with the world's progress and the sentiment of rich and poor alike denotes it as one of the purest of human pleasures.

The beneficial influence of public parks and squares with their landscapes and flower beds, have undoubtedly played an important part in educating the mind to love of flowers and the tender care of them bestowed upon a meagre collection of plants in a yard or window garden, may have first received those pleasing sentiments from these public displays.

Similarly the introduction of cut flowers in the home has an elevating and refining influence, and much has been said of the wonderful effects produced upon the sick and convalescent by the presence of suitable flowers. Therefore the advantage of possessing a flower garden, of whatever dimensions, may be looked upon as an acquisition worthy of our best efforts and apart from our own material benefit, may cast its influence for good in all directions.

In commencing to lay out the garden its dimensions, location and so forth must of course be determined by the extent of the property. As near the home as possible with a well-made walk to reach it, is desirable. A background of trees, or shrubbery, with some old shade overlapping, will add to its enjoyment. Large trees are never desirable when in proximity to the flower borders; in fact, the more open and clear the location where the garden is made, the better the chance for ultimate success. A few choice fruit trees, or evergreens, may not be found objectionable, as in their shade some members of the garden thrive; for instance, foxgloves and lily of the valley. The ground should be thoroughly prepared where beds and borders are to be placed; a liberal quantity of manure should be incorporated.

A preconceived plan is also necessary, and in preparing this, the idea should not be to utilize all space for flowers and walks, but rather a larger space for grass walks and open spaces. More room will, of course, be needed; but the flower garden will be better enjoyed when associated with well-kept grass.

The more formal methods of making the flower garden and a similarity of arrangements have, perhaps, too frequently prevailed, and where a small space is allotted for that purpose it seems a difficult matter to change from long recognized methods. The old-fashioned garden, with box edging and various geometrical designs, does not lend itself so readily to the old-fashioned flowers we desire. Similar designs, with cement walks, fountain, and lily pond, must also be very formal. Sunken gardens, with the accompaniment of garden houses, statuary, fountains and so forth, have also many admirers. Many have seen and read of the magnificent gardens of the old world, which are the products of generations of master minds and unbounded wealth.

It is not the purpose of this paper, however, to dilate upon these examples, but rather to suggest what may be accomplished by the average home and garden lover.

Supposing our intended garden is to have ample borders, grass paths and open spaces. We have also a good walk made from the dwelling, so that the garden may be enjoyed in all weathers. As it enters the garden, wide margins of grass and wide borders of flowers are arranged on each side, and should the walk not pass the garden for any other purpose, it shall end in a rustic Summer house, well planted with vines, or a mound of earth and stones covered with the trailing Wichuraiana roses, or some other interesting object.

The garden may be enclosed by a hemlock or Norway spruce hedge, or if a more rapid-growing enclosure is desired a privet hedge or hurdle fencing planted with roses and quick-growing vines may be used. At each end a rustic arch, planted with clematis or roses, or tall-growing evergreens, may be judiciously employed.

A grass walk may join the hedge, or boundary, making a circuit of the garden, along which may be arranged smaller borders, or beds, allotted to a certain variety of plants; for to get the full value and enjoyment of many important subjects, individual plantings are advisable. For instance, hardy chrysanthemums in variety may occupy one bed, a sowing of Phlox Drummondii around the margin, will flower until Midsummer, when the chrysanthemums will have grown sufficient to occupy the entire space. Another bed may be planted to perennial phloxes of good varieties. Just imagine a mass of colors of Cocquelicot or Epopee! Conflicting colors may be separated by masses of white; Independence and Fiancee are among the best.

A bed, or border, of single dahlias always looks well and is more convenient for cutting; as also do sweet peas. A bed of Anemone japonica, and its several varieties, will well repay when the October days come. Peonies, roses, especially such good continuous flowering varieties as Maman Cochet, Gruss an Teplitz, etc.

The long borders may be used for a mixed collection and to display the best general effects. Taste in arrangement will be an important consideration, and whatever is planted should be in sufficient quantity to assert itself. Good wide borders as they are, we have clumps and masses of many perennials and selected so as to have some variety in flower at all seasons, perhaps, planting with the object of having more in the Spring and Autumn, being seasons when the garden may be more comfortably enjoyed. The front of these borders is planted with tender annuals, or plants that are raised from seed and cuttings each year; not planted in rows, however, but masses of each variety.

Suppose we analyze these borders and discover the materials of which they are composed. Placed well back at intervals throughout the entire length, we have clumps of such subjects as boltonias, asters, Rudbeckia Golden Glow, Helianthus rigidus, Maximilianus, and some others, heleniums, hollyhocks, etc. A little forward of these an occasional plant of cassia, mallow or peony, interspersed with clumps of dwarfer perennials such as liatris, Pyrethrum uliginosum, especially perennial phloxes such as Wm. Robinson and Independence, rudbeckias in variety, Helianthus multiflorus, Stokesia cyanea, Dielytra spectabilis, physostegia, monardas, digitalis, irises, aquilegias and many other perennials of similar height, adding also an occasional clump of cannas and scarlet sage.

We have reserved the front for annuals and dwarf perennials, a mass of vinca or Madagascar periwinkle to be followed by verbenas, then torenias, then petunias. A few bold masses of salpiglossis, lantanas, stocks, sweet williams, ageratum and an occasional clump of grasses such as pennisetum, gardener's garter, or Job's tears, dwarf nasturtiums, snapdragons, gaillardias, etc., and many favorites will readily suggest themselves. Nearly all these annual subjects named last throughout the season, among such as do not, we plant gladioli, montbretias, etc., so that vacancies rarely occur.

Such a garden may become almost a perennial delight by planting bulbs in the Autumn, with pansies, English daisies, forget-me-nots, hardy primroses, and wallflowers added in the Spring.

This may appear a formidable list when economy in such expenditures has first to be considered, but a great deal can be accomplished when only a small greenhouse, or even hot beds, are available, providing, of course, genuine interest is not lacking. For instance, all the plants named for Spring planting, namely, pansies, daisies, forget-me-nots, primroses and wallflowers, should be sown in August or September. In October they are separated and placed about four inches apart in a cold frame and may be protected only by shutters during the Winter. If advantage is taken of good weather, to air and tend them, nothing will so well repay the effort.

As regards the Summer bedding plants, the hot-bed will do nicely to raise most of them; it should be made early in March. Special efforts should be directed to have the salpiglossis, and where a greenhouse is available the plant is more readily handled, but the fact of it being rather tedious should not debar its use.

Another annual which is always satisfactory is the helichrysum, or everlasting daisy. With several other everlasting flowers this, with drying, makes pretty bunches to last all Winter in the house.

Newer introductions, or reintroductions of older varieties of annuals with more or less merit are frequently catalogued by the seedsmen. Last year we tried several, among which may be named antirrhinum Sunlight, the foliage of which was quite yellow, but when it commenced flowering it gradually turned green and did not appear to be as good as existing varieties. Arctotis grandis, a single composite flower, some two inches in diameter and lavender in color, bloomed freely during the early part of the season, but became entirely too straggly. The flowers closed in the evening, otherwise it is a good cut flower. Of petunia, Howard's Star, a good percentage came true, extremely free flowered, and looked well in the borders, but not of such size and substance as blooms of the fringed varieties. Celosia spicata argentea linearis is one of the spiked cockscombs with a whitish flower spike tipped with pink, and, when true, is a good subject for the borders and for cutting. Dahlia Colarette only resulted in a poor mixture of single and semi-double varieties.

Gaillardia James Kelway is a good form of Gaillardia grandiflora and well worth growing. The following are perennials: Shasta daisy was a disappointment, but we have sufficient faith in its introducer, Luther Burbank, to believe it will eventually become an acquisition. Thalictrum aqueligifolium is a feathery and graceful border plant. Primula veris superba is a good form of the English primrose.

All this may be looked upon as the flowering side of the Summer flower garden. Constant interest and attention and lots of work are necessary, however, throughout the season. There is the grass to mow, weeding and edging the borders and walks, neatly staking plants and removing dead and past flowers. Constant vigilance is required also to counteract the depredations of various insects, such as red spider on the perennial phloxes, the antidote for which is kerosene emulsion. The voracious blister beetle destroys the flowers of China asters and eats whole plants of Anemone japonica. Hand picking and dusting with slag phosphate, or Dunnite, seem to be the only remedies for these ironclad fellows. The former insecticide is cheap and it is besides a valuable fertilizer. I have found, also, that it scares away the aster beetles effectively. They will not come near the plants where the phosphate has been freely dusted over the plants. Lots of people have almost given up growing asters on account of the beetle, and I am very pleased to suggest this cheap and effective remedy. I recommend applying it when the plants are dry, not because the phosphate will injure wet plants, but because it might be unsightly. These and many other insect enemies, together with blights and bad weather, make up what might be the trials of the virtuous gardener, but we have to bear them with philosophy, and, on the whole, they are but the shadow by which we are enabled to realize the beauty of the other side of the picture.

LOSSES BY FIRE.

GOSHEN, IND.—The greenhouse of John Berkey, with its contents, was destroyed by fire, Friday, February 20. No insurance.

HAVERHILL, MASS.—Fire in the greenhouse of F. W. Abrams, Proctor street, March 14, did $755 damage before it was under control.

ST. JOHN, N. S.—On March 7 fire did considerable damage to the greenhouses of Mrs. W. H. Jones, Tarryburn. One house and its contents were completely destroyed; two sheds were also burned.

Review of the Market

NEW YORK. At the beginning of the week it looked as though the cut flower trade had thrown off its tired feeling, and was about to assume its normal condition. It turned out, however, that a little extra funeral work was being done; the spurt was only of one day's duration, and Lenten conditions are still prevailing.

Violets are coming in very plentifully. Never before were they so numerous and, while the stores use up a fair quantity every day, vast quantities have to be sold in thousand lots to the speculators. The prices obtained on such job lots help materially to pull down the average values.

Roses cannot be said to be very abundant, at least the better grades are not, and it has been possible to obtain a slight advance on the special Bridesmaid. American Beauty have remained firm also. It is a noticeable fact that in grades of Bride and Bridesmaid, known as Nos. 1 and 2, the first mentioned are much the hardest to make a good average on. Buyers seem to want either a long-stemmed rose or a short-stemmed one, and the grade of the medium length is becoming a difficult proposition to handle.

Carnations are not bringing any fancy prices these days. There seems to be too much of the finer-grown stock around, for what demand there is, and this is offered cheap enough, so that ordinary grades do not have much of a show.

The home-grown stock of narcissus is having to compete with flowers that are coming in from the South, and as these are being offered at 50c. per 100 down to 25c., it is difficult to realize more than 50c. to 75c. on the home product. Tulips are doing slightly better, but mignonette, marguerites, sweet peas and freesias are all clearing out very unsatisfactorily..

The best lilies are bringing about 8c. each, and 12½c. is mentioned as the Easter price, though we think they will go higher than that, especially those delivered on the plants.

Cattleyas are not quite so plentiful, though there is an abundance of dendrobium on the market, which does not, however, move out very well.

Smilax is in fair demand and there is an advance in price noted. Asparagus and adiantum fern are in constant supply, with no change in values.

CHICAGO.—There has been no marked change in the market since last report, but a little stiffening in all lines is noticeable. American Beauty of the fancy grades are coming in in larger supplies than before, and the market has increased somewhat, as a readier sale is found for them than last week. Bride and Bridesmaid are about the same, with the exception that the color of the latter is not so good, due to the cloudy weather we have experienced for the past week. All the other kinds are about the same as at last writing.

Carnations do not seem to be so plentiful as they were and the values are a trifle higher. As yet there seems to be a dearth of whites, or it may be that there is more call for them than for any of the colored ones; as a consequence, it is rather hard to pick up any great quantities after the regular morning sales.

Of bulbous stock there seems to be enough of all kinds to supply the demand at the present time, though with some growers there may be a shortening up of the cut for a few days, with the exception of lilies, which seem to have materially increased in the past week, with the price fairly well maintained.

Violets are about the same as at last report, and greens are still a short factor, especially smilax. R. J.

ST. LOUIS.—The past week at the wholesale houses the market was very lively. There seemed to be plenty of stock, but the demand was so great that one would think stock of all kinds was scarce; the street men are using up piles of violets, which are very plentiful.

The weather is now quite mild. With lots of sunshine to gladden the hearts of the growers of Easter stock, who are now preparing for the rush, all bulbous stock is scarce, which heretofore has always been a drug on the market at this time of the year. Harrisii lilies are especially scarce with more callas than demand. Valley, which has been very druggy of late is moving better.

All roses coming in are cleaned up every day. The flowers are of good quality. From $6.00 to $8.00 per 100 for the best is the price for Bride, Bridesmaid, Meteor and Golden Gate. Perle is quoted at $4.00 and $5.00. Extra long American Beauty sell at $4.00 per dozen.

Carnations are sold out each day at from $3.00 to $5.00 per 100; the latter price is for fancies. Some very fine stock is coming in from the J. D. Thompson Carnation Co., St. Louis Carnation Co., and W. J. & M. S. Vesey. Henry Baer, Peoria, Ill., is also among our best shippers of carnations.

Violets are selling in thousand lots at $3.50. All are California, which is the only kind found in this market at present.

Bronze galax leaves are having a big demand. The retail florists about town report a big lot of funeral work the past week. ST. PATRICK.

BOSTON.—An entire overturn in the condition of the market has resulted this week, and roses which were very plentiful a week ago have shortened up considerably, and are now eagerly sought for; while all kinds of carnations are druggy. Bride and Bridesmaid especially are selling very well at prices ranging from $12.00 per 100 down to $2.00. Beauty and red roses do not move so fast, though there is an improvement in the demand for them over that of last week. Prices, however, do not vary perceptibly.

Carnations have become even more druggy, and it is impossible to dispose of the daily receipts at any fair value. Very good stock is freely offered at $1.50 to $2.00 per 100, the finest grade of ordinary sorts making $2.50, while novelties and fancies go to $3.00 and $4.00. The ordinary and inferior stock is cleaned out at exceedingly low figures.

The bulb market shows little or no improvement. Von Sions, Trumpets and Princeps are freely offered at $1.25 to $1.50 per 100, and Empress, Emperor, Golden Spur, Horsfieldii and the choicer varieties make from $2.00 to $3.00 per 100. Tulips range from $1.50 to $2.50 per 100 for singles, and up to $3.00 for double varieties. Dutch hyacinths are in fair supply at $3.00 to $4.00 per 100. N. poeticus, at $1.00 to $1.50 per 100, does pretty well. Valley is going slow at $2.00 to $3.00 per 100. Lilies have now become very plentiful and are selling only fairly well at $8.00 per 100, a few going to $10.00.

Mignonette is plentiful at $2.00 to $4.00, and pansies, sweet peas, primroses, wallflowers, myosotis, etc., in small bunches sell well. Violets continue too numerous at about the same values as last quoted. F. J. N.

PROVIDENCE, R. I.—Things may be summed up in a few words—good general business. True, the growers have to work a little harder in disposing of their stock, but everything goes at a fair price and, consequently, there is no appreciable glut.

Pinks are $1.50 to $3.00; roses plentiful at your own price, say 6c.; white tulips at $20.00 per 1000 are a sale; other tulips and daffodils depend upon the needs of the buyer to bring a fair price, but most of them are hard to move. Greens are very scarce; even fancy and dagger ferns have jumped in price to $2.00 per 1000. Smilax and good adiantum are difficult to obtain locally, and are imported. Galax leaves are all right, and help out wonderfully at $1.50 per 1000. Asparagus plumosus is not in the market generally as yet.

Budlong anticipates growing a hundred thousand carnation plants during the season of 1903-4, and will try to make the New York market gain a lap in importance. C. S. MACNAIR.

CINCINNATI, O.—Business is first-class, and stock of all kinds short of demand. Carnations are quite scarce. Roses are not equal to the demand; consequently, prices remain firm—quotations about the same as last week. Dark and rainy weather is the prime cause of flowers being scarce, and so far Lent has had no effect on the market. Violets are about done around here. The growers in this section are busy getting their stock in shape for Easter.

E. G. GILLETT.

PITTSBURG.—Trade conditions have not changed much since last week, but stock is coming in more freely and is of better quality. The fine Spring-like weather is the cause of this. It is really exceptional weather for the beginning of March, and as some cold is yet to come much harm may be done to vegetation. Roses are selling from $3.00 per 100 up; American Beauty, fine long stemmed, about $25.00 per 100; carnations from $1.50 upward; bulb stock from 3c. to 4c. each; violets sell at all prices. A few gardenias are in the market, although there is not much demand for this old-time favorite. Calla lilies are almost as plentiful as Harrisii and far cheaper. Smilax is usually a little scarce at this time of the year. The fine weather has stimulated the plant trade and there is a plentiful supply to be seen in the markets and stores; blooming plants are selling quite well.

DETROIT, MICH.—Stock is appearing heavier all along the line, and all stuff is up to the standard. Mild weather has helped things along, but more sunshine will make a marked difference. Conditions are much improved from last week's writing; although prices have dropped on roses everything else is holding its own well.

Beauty is in good shape, and next to the Bride is holding its own at moderate prices. Maids, Gate, Meteor and Pearl are slower to sell and lower in price. In carnations there is still a very marked scarcity; demand is way above the production. Violets continue to be plentiful and at lower prices; some very fine white antirrhinum is coming in and sells well at 8c. to 10c.; smilax is quite scarce, as it is universally. Bulbous stock in plenty as well as all other greens. DILGER.

INDIANAPOLIS.—Exceptionally unseasonable weather has brought on all kinds of flowers by the thousands, and it alarms the florist to see such a quantity of stock so far in advance of Easter. Fortunately there has been quite a bit of funeral work but even that does not save a great deal of bulbous stock from going to waste.

All kinds of roses are very plentiful and prices have declined sharply. Good Maids and Bride sell at [illegible] to 6c.; seconds, 2c. to 3c. Liberty are plentiful at 8c. to 10c. Meteor are poor, and few of them are handled on this market. Beauty range in price from 3c. for shorts to 25c. for the best; there has been little demand for the longer-stemmed Beauty. The prevailing retail price for roses is from $1.00 to $2.00 per dozen.

The best carnations can be bought for $3.00 per 100, good grades are to be had at $2.00 to $2.50 per 100; 60c. to 75c. per dozen is obtained for them in the retail stores.

Ordinary tulips, daffodils, valleys and Romans sell at 60c. per dozen; Murillo tulips are plentiful and sell well at $1.00 per dozen. Sweet peas bring 75c. per 100 wholesale; mignonette, $3.00 per 100 sprays; forget-me-not, $2.00 per 100 sprays; freesias, $2.00 per 100. I. B.

LOUISVILLE, KY.—We are now experiencing Summer weather and, consequently, all bulbous stock is coming in most plentifully. This week the retailers report business a little quiet and show a surplus of stock. Retail prices asked per dozen: Roses, $1.00 to $2.00; American Beauty, $2.00 to $6.00; carnations, 50c. to $1.00; Dutch hyacinth, $1.00 to $1.50; Romans and Narcissus, 50c.; lily of the valley, 50c. to $1.00; Harrisii, $2.50 to $3.00; callas, $2.00 to $3.00; tulips, 50c. to $1.00; jonquils, 25c. to 50c.; violets, 50c. to $1.00 per 100. The demand for blooming plants has been very good; some of the prices received are quoted: Hyacinths, tulips, jonquils and freesias, in pots and pans, from 25c. to $1.50 each; azaleas, 75c. to $5.00; rhododendrons, $1.50 to $5.00; spiræa, 35c. to 75c.; callas, 50c. to $1.50. Harrisii are sold at about the same price as the cut blooms would bring. A. R. B.

Kudzu Vine.

Quite a number of persons have asked me at times about the Kudzu vine, having read or heard of its marvelous growth. This vine is one which many catalogues have listed under the name of Dolichos japonicus and, later ones, Pueraria Thunbergiana. Its rapid growth is truly marvelous, in strong plants and in the height of its season being a foot a day. In foliage it is not unlike that of the Lima bean; the flowers are borne in small panicles and are rose-colored. To any one having a ground space to cover, or an old tree for its support, or any other place where lots of room is to spare, this is the vine to plant. When young it dies to the ground every Winter with us in Philadelphia, but as it gets age it maintains live shoots above ground. But whether alive above ground or only below it makes little difference; the strength is in the roots, and hardly any one will complain of too little growth through the season.

Though this vine may have been in the country before the Centennial Exposition in 1876, but little seemed known of it before its appearance in the Japanese collection at that time.

It is easily increased by layering, and no doubt would strike from green cuttings as well.

Beautifying Ugly Corners.

There are many shady corners on a florist's place that could be made beauty spots by the judicious planting of hardy ferns, doing much to make his establishment attractive to customers, and in this way bringing him custom from many to fix up similar places on their own grounds. Hardly a city yard but has a place for ferns, and, as to cats destroying the plants, there are many persons to-day who protect their small gardens and plants from predatory animals, and at small cost, by the use of wire netting.

The fine hair-like roots of the greater number of ferns bespeak for them an open soil. Decayed leaves, loam, sand and peat make a good mixture, though, aside from a heavy one, I have found ferns do well in most any kind.

In the selection of ferns, the stronger growers are the best for the purpose; and do not overlook a good sprinkling of the evergreen species, as these cheer one by their green until the snows of Winter cover them, and it is often possible to get a green frond or two from them in Winter for a background to flowers. The best of the hardy evergreen ferns are found among the aspidiums. Such species as acrostichoides, spinulosum, Goldianum, cristatum and marginale are some of them. Then there are a few aspleniums, notably ebeneum, Trichomanes and angustifolium; and the hart's tongue, scolopendrium, should have a place. These and some of the strong growers to be found among the osmundas, Woodwardias and onocleas not forgetting other deciduous kinds, offer a variety large enough to make a grand display.

I have often tried the walking fern in my collection, but sooner or later insects destroy it. It may be that when in their wild homes insects are kept in check by their enemies, the birds, the help of which we cannot secure near our dwellings.

JOSEPH MEEHAN.

Root Pruning Trees for Removal.

It often comes to the florist, as it does to the nurseryman, to have calls for the removal of large trees, so large that doubts arise as to the safety of the trees under the work. It is not nearly appreciated as it should be, that safety can be almost assured by root pruning the trees a season in advance. It has been so often practised by a few, and so successfully, that there is no manner of doubt as to its utility. A circular trench must be dug around such trees to a depth that will be sure to meet with the large roots. These roots are to be severed, or the greater number of them, and then the soil refilled in the trenches. From these cut roots numerous small ones will issue, rendering the transplanting tolerably safe later on. With a few straggling roots, transplanting is not easy; with a cluster of small ones it is less trouble. As to the distance from the trunk to locate the trench, a tree ten feet high should have the roots severed at about three feet. Native hollies and trees and shrubs usually hard to transplant are made almost sure cases by this system of root pruning.

The cutting of the roots may be done either in Fall or Spring, and then the removal made after another growing season has elapsed. It is better to let two seasons of fresh root growth pass by before removal, as a great mass of roots will be present then. If decided beforehand that two seasons shall elapse, almost every large root may be cut off, but if but one season is to pass, then do not cut off every one of the large roots, only about three-fourths of them.

Anyone having a large tree to transplant would be pleased with the result of root pruning.

Suffolk County Horticultural Association

At the regular monthly meeting last week it was decided to hold a show at Pavilion Hall, East Islip, N. Y., June 23, and to hold the second annual exhibition October 28 and 29, at Bay Shore, N. Y.

An interesting essay on chrysanthemums and their culture was read by Mr. Stewart, for which he was tendered a hearty vote of thanks.

The next meeting will be held April 7, at Mechanics' Hall, Islip.

2 Duane St., New York

List of American Varieties of Vegetables for 1901 and 1902.

Last week we referred briefly to the issuance by the Bureau of Plant Industry, United States Department of Agriculture, of a list of American varieties of vegetables for the years 1901 and 1902. Such a list should be found of greatest service to catalogue men and seed buyers alike.

The full scope of the publication may be gleaned from the author's (W. W. Tracy, Jr.) introduction, which, in part, is as follows:

"This list is intended as an index or catalogue to serve the purposes of seedsmen and experimenters, and aims to supply information which can not be readily found in seedsmen's catalogues. For those who wish to obtain a certain variety the names are given of all seedsmen in the United States and Canada who catalogue that variety; for those who inquire for synonymous varieties there will in many cases be found synonyms given with the names of the seedsmen who cite them as such; while for those who look for a shortening and simplifying of our already long and complex list of names there will be found here a foundation upon which such work can be carried on.

"Variety names of vegetables in this country are being greatly multiplied every year by the renaming of old varieties. This practice, as well as the giving to new varieties names similar to names already used, has made the nomenclature of the whole very complex and misleading. The 320 names of lettuce entered in the list, for example, could be reduced to less than 90 distinct varieties, and the similarity of many of the names and the distinctions which must be borne in mind to separate the varieties make the whole subject very bewildering. To illustrate, the Favorite, Rudolph's Favorite, Sutton's Favorite, Florida Favorite and Gardeners' Favorite varieties of lettuce refer to types very different from one another, while Early Dutch Butter, Dutch Speckled Butter, Hornberger's Dutch Butter, Philadelphia Dutch Butter and Philadelphia Butter all refer, except the last, to the same variety. Besides this, there are often several different types of the same variety recognized by different seedsmen, as is well illustrated by the case of the Philadelphia Butter and Silver Ball varieties.

"Besides being useful for reference, this list, it is hoped, will bring about some desirable changes, of which the first to be mentioned is the adoption of a single name for all identical varieties. There are, however, some difficulties in the way which should be well understood before such work is undertaken. Where the names are similar the varieties are generally identical, but, as already pointed out, there are, altogether, a large number of cases where they are not so; besides this there are often recognized by different seedsmen several widely different types under the same variety name. Then also certain words which might be dropped from most names must be retained in others, as for example, 'extra' and 'early,' which may be dropped from the variety of bean known as Extra Early Red Valentine, but must be retained in the Extra Early Refugee variety to separate it from the distinct variety commonly known as Refugee. For these reasons very few inflexible rules for shortening and simplifying our variety names can be laid down. It will require extensive field tests to determine all of our synonymous varieties, but it is hoped that this list, perfected by successive additions and corrections, will bring about a better understanding of varieties, especially as regards synonyms, and finally establish a body of distinct varieties, eliminating many synonyms which now claim the attention of the trade and public as representing distinct varieties.

"Another improvement which this list should bring about is the prevention of the duplication of old names or the giving to new varieties names which closely resemble some old name. Introducers of new varieties have sometimes given names to their introductions exactly duplicating names already applied to other varieties or if not duplicating them very much resembling them, not knowing of course that such names existed. By referring to this list introducers will hereafter have a means of preventing the confusion arising from this source.

"In preparing this list the following words and phrases have been omitted from the variety name as being unnecessary and multiplying names which mark no real varietal difference: Improved, extra, perfected, pedigree, select, extra select, choice, extra choice, superior, celebrated, fine, famous, our own, true, new, the, and the names of persons. Exceptions have been made and some of the above words retained where they are supposed or claimed to indicate a real difference in type or where the dropping of such a word would be confusing and misleading because the variety is generally and familiarly known only by the full name as in case of Horsford's Market Garden and Nott's Excelsior peas. The words giant, mammoth, large, early and extra early have in every case been retained, because, though not usually indicating a difference in type, there are many cases where they do indicate such a difference. There is, perhaps, more reason for retaining the words 'improved' and 'perfected' and the names of persons than the other words mentioned as omitted, and for this reason they have been allowed to stand in the groups of similar names, though, as already stated, they have been omitted from the alphabetical arrangement.

"Occasionally some of the above descriptions mark real superiority of stock, especially as regards purity and vigor, due perhaps to careful 'rogueing' or to climatic, soil or cultural conditions. It would be much better, however, if such superiority were left to be known by the reputation of the seed house rather than advertised by the addition of the seedsman's name or adjectives to the simple variety name, a practice which has been so much abused that these additions have little or no significance.

"Besides the above reductions in the regular catalogue names other changes have been made, as follows: When the words 'earliest' and 'early' are applied by different seedsmen to the same variety, not marking any difference in type, as in Early Sheffield and Earliest Sheffield, that one of the two forms has been taken up which has been most generally adopted by seedsmen. Incomplete variety names like Plum and Cherry have been changed to more exact names, as Yellow Plum, Red Plum, Yellow Cherry and Red Cherry, wherever it has been possible from the descriptions given in the catalogue to determine which kind is referred to.

"In beans the name Lazy Wives of some seedsmen has been changed to the more generally recognized Lazy Wife, and Marrowfat whenever used is changed to Marrow. In beets the words 'blood' and 'turnip' not being used with any regularity by seedsmen, even with reference to the same variety, have been dropped from names whenever possible, and retained only when they serve to distinguish different though similar-named varieties, as Bastian's Half Long Blood and Bastian's Blood Turnip, or where the dropping of them would make the name misunderstood or incomplete, as in Early Blood Turnip. In cabbages 'headed' and 'heading' have been dropped from all names and Holland changed to the more generally accepted name Hollander. In cauliflower Late Algerian has been changed to the more generally accepted name Late Algiers. In lettuce Early Stone, Golden Stone and Spotted Dutch Butter were changed to the more generally accepted names Early Stonehead, Golden Stonehead and Speckled Dutch Butter, and the words 'white-seeded' and 'black-seeded' retained only when necessary. In muskmelons the words 'cantaloupe,' 'citron' and 'nutmeg,' not being used with any regularity for the varieties to which they are applied by some seedsmen, have been dropped from variety names, excepting where it has been necessary to retain them to make a name complete. In onions 'long-keeping' has been dropped from all names. In peas 'marrow' has been changed to 'marrowfat.' In peppers 'thornless,' which botanically speaking is an incorrect term to apply to peppers, has been changed to 'spineless,' which is the word used by most seedsmen. In squashes the word 'golden' as used in Golden Summer Crookneck, Mammoth Golden Summer Crookneck, Giant Golden Summer Crookneck and Early Golden Summer Crookneck, has been changed to the more generally adopted word 'yellow.' In tomatoes One Hundred Day and Advancer have been changed to the more generally adopted names Hundred Day and Advance."

PHYSOSTEGIA VIRGINICA.

Physostegia Virginica, Dragon Head or Lion's Heart.

This is an American plant and by no means a new one; yet it is a flower so unique in its make-up that it stands apart from all others and alone. Without exception it is the most valuable hardy herbaceous plant producing pink flowers. For massing, planting in association with other appropriate varieties in the border, for planting with shrubbery or for cut-bloom, it is unrivalled. In value it is not equalled by the popular Rudbeckia Golden Glow; and as it possesses a constitution just as rugged, is equally prolific and far more beautiful, it is destined to exceed in popular favor that grand and beautiful hardy perennial plant.

Too much can scarcely be said in its favor. Its large, graceful spikes of tender shell-pink flowers are produced in greatest profusion from about the middle of June, and (if kept cut, so as not to produce seed), it continues to flower in a perfect mass of bloom until frost. The flowers themselves are intensely interesting and attractive (see illustration of a spray, reduced one-half), resembling large heather, or small orchids, and in addition to their pleasing color they are daintily spotted inside with crimson.

The spikes of flowers are never so compact as to appear formal, although the blooms are very numerous and lasting. The stems are long, square, thick, rigid and strong; holding the flowers in a dignified and stately manner when upon the plant, and when cut. The plants form large, dense clumps, three or four feet high, and require no petting, succeeding in all kinds of soil and in all situations. Foliage smooth, dark green; set opposite on the stem and closely sessile; three to six inches long (the lower leaves often being very large) and indistinctly toothed. It is, indeed, a queen among hardy flowering plants.

Physostegia virginica alba is a variety of the above with pure white flowers. In all other respects it is identical with the type.

J. T. LOVETT.

Little Silver, N. J.

Providence, R. I.

The Florists' Club engaged Professor Card, of Kingston, to lecture at the March meeting and, as a result, the members voted to frame a petition to the Legislature asking for State greenhouses to be used as an experimental station. It is doubtful if the bill will be passed at the present session. The idea has caused favorable comment among the florists, although such an experimental station would primarily benefit the farmer more than the florist.

Mr. Chappell requested information concerning the presence and effect of sewer and illuminating gases escaping into his greenhouses.

Mr. John Macrae presided. He invited the club to visit his plant the following Wednesday.

David Phillips has associated himself with Foster Greenhouses this season. He lost his own greenhouse crop through the coal famine.

It is difficult to figure on the Easter crop of violets, but it is safe to say all good singles will be gone.

The downtown trade should remember that the Albee Stock Co. opens its Summer season the day after Easter. This will cause a heavy call for flowers, especially violets, if there be any remaining at that time.

C. S. MACNAIR.

Poughkeepsie.

The School of Practical Agriculture and Horticulture, of which George T. Powell is manager, is now located near this city, having entirely outgrown the old quarters at Briarcliff.

Boston.

Among the Growers.

Early this week we visited the houses of William W. Edgar at Waverly, E. N. Pierce & Sons and Anderson & Williams at Waltham, where Easter stock is grown so extensively.

At Edgar's, as usual, everything is looking first-class. Lilies are a fine sturdy-looking lot of short stocky plants, with fine foliage and well set with buds. In all 5,400 were grown and there will probably be 5,000 good ones, showing a very small loss from disease. A fine lot of American Beauty and Ulrich Brunner roses in 6½-inch pots are grown. The former make a surprisingly good-shaped plant and will all be in on time. A few Brunners, which are not figured on for Easter, will come along later, but many of them will be in good shape. The American Beauty are a novelty at this time and should prove ready sellers.

There are 400 hydrangeas grown, including many specimen plants bearing twenty to twenty-five head of flowers; all the others will average twelve t fifteen heads. About five hundred azaleas in various sizes and colors, wel set in bud, are being brought along Also as fine a lot of acacias as it ha been our pleasure to see for some time A few fine retinosporas and an interesting collection of old wistarias i white and purple, are proving popular as witnessed by the number alread bearing "sold" tags.

At Pierce's about 75,000 lily bulbs wer started this year, but they were not s fortunate in getting the healthy bulbs as large lots of diseased stock will testify. Especially unsatisfactory wer the "multiflora" variety (black stemmed kind), as nearly the entir batch went bad. They will get a fin batch in, however; but, as Mr. Pierc says, it "takes the fun out of it" whe you have to throw away such a larg proportion. A fine house of Brunne in boxes for cutting is coming alon well. The carnation houses are lookin good, especially the Mrs. Lawson an G. H. Crane houses, which have bee most successful all Winter.

At Anderson & Williams' a handsom lot of Crimson Rambler is to be see They are fine stocky and well-shape plants, and of salable sizes, not onl for the grower, but for the retailer a well. The houses of Bride and Bridesmaid present their usual clean, health well-groomed appearance.

Carnation Exhibition at the Flower Mark

The eighth annual exhibition o the Boston Co-operative Flower Growers' Association, held Saturday last a the Market, was grand, surpassing an of the successes of former years, bot in the number of exhibits and in th quality of flowers shown. This exhibition is becoming a purely local affai and this year the great majority of th exhibits were staged by local grower Only a very few came from any distance.

Peter Fisher, of Ellis, had thre grand vases, one each of Enchantres Mrs. M. A. Patten and Nelson Fishe on the front counter, banked on eithe side by vases of The Queen from th Little South Floral Company, of Sout Natick, all of which were of excellen quality.

M. A. Patten, of Tewksbury, sent i a fine collection, comprising vases o Gov. Wolcott, Jos. H. Manley, of excellent size and color, and Gaiety of ver good quality. Gov. Wolcott seemed t be the popular white, as of the fiv vases for competition four were of tha variety. H. A. Stevens, Paul E. Richwagen, of Needham, and Geo. H. Bea also showed it. Mr. Bean staged a vas of Boston Market.

Geo. H. Bean's display containe some well-grown stock of the followin varieties: G. H. Crane for scarlet, Th Marquis, Floriana and Morning Glor for light pink, Mrs. Thomas W. Lawso for dark pink and Harry Fenn for crimson.

Among the scarlets shown beside those already mentioned, were S. J Goddard's bunch of G. H. Crane, C. F Dickerman's vase of the same variet and Albert Batley's J. H. Manley.

For light pink varieties, Albert Roper's Fair Maids were very fine, and J D. Twombly's The Marquis showe up well. With Mr. Bean's three varieties named above this made up the display for that color.

For dark pink, Mrs. Lawson wa shown by three of the four exhibitors

L. E. Small, of Tewksbury; G. H. Bean, and the Reading Greenhouses. C. E. Dickerman, of Dorchester, staged Cressbrook.

In crimson, there were two vases each of Governor Roosevelt and Harry Fenn. The former were staged by Paul E. Richwagen and C. E. Dickerman, while C. W. Ward and G. H. Bean showed Harry Fenn.

There were only two varieties shown n the class for yellow variegated, Eldorado by Backer & Co. and Dorothy Whitney by Patten & Co. Patten & Co.'s vase of Gaiety was the only one shown in the white variegated class.

The seedling table was a very interesting one, containig many promising sorts, though the committee decided hat only four were worthy of the certificate. C. W. Ward's Alpine Glow, a medium-sized flower with very delicate ight pink coloring, but good strong stem; Mrs. Theodore Roosevelt, a dark pink, which looks like an improvement over Mrs. Lawson and closely resembling Nelson Fisher; and Sensation, an odd-colored one being an orange variegated color, were all certificated, as was L. E. Marquisee's Albatross. Mr. Marquisee's Sunbird, a yellow variegated, arrived in rather poor condition.

Among others worthy of note were he following: Albert Roper's No. 1, a white variegated variety of good size and fine stem; No. 305, also white inged with pink, medium-size flower; both varieties are very fragrant. E. Sheppard, a brilliant scarlet, possessing considerable fragrance. Dailledouze Bros.'s white Bradt and Fragrance made favorable impressions.

S. J. Goddard's No. 3, a yellow variegated variety striped red, of good size and stem, and his Queen showed up very well. Marion Buxton, a pleasing ight pink variety, which had both stem and size, sent by Geo. E. Buxton, of Nashua, N. H., was admired by all. Geo. O. Buckham's Octavia, a very fragrant pink variegated variety; A. E. Corell's Ruby, and Deny Zirngiebel's wo light-pink ones, unnamed, make up he list of seedlings.

The violet display brought out some ine flowers and gave the judges considerable difficulty to determine the prize winners, especially for single violets, in which class there was practically no choice between the bunches of Princess of Wales, as staged by Geo. W. Ayer, and William Sim, to whom irst and second prizes were finally awarded in the order named. For doubles, H. F. Calder won first with Lady Hume Campbell; J. S. Smiley ook second. Among other exhibitors were: N. F. Comley, Oak Hill Greenhouses, North Chelmsford; H. A. Stevens and W. J. Dana.

William H. Elliott staged two fine vases of American Beauty roses; E. N. Pierce & Sons a fine vase of lilies; Wm. Sim some exceptionally fine Blanche Ferry sweet peas; J. Clark a bunch of Paris Golden wallflowers. H. N. Eaton made a neat display of lilies and geraniums in pots. Lucius H. Foster showed a few plants of the Anna Foster fern.

The Judge's Report.

Best vase of carnations in the exhibition—Peter Fisher, with Enchantress; second, Peter Fisher, with Mrs. M. A. Patten.

Fifty white—Patten & Co., with Gov. Wolcott; second, H. A. Stevens, same.

Fifty scarlet—Patten & Co., with J. H. Manley; second, S. J. Goddard, with G. H. Crane.

Fifty light pink—Albert Roper, with Fair Maid; second, J. D. Twombly, with Marquis.

Fifty dark pink—L. E. Small, with Mrs. T. W. Lawson; second, Geo. H. Bean, same.

Fifty crimson—Paul E. Richwagen, with Gov. Roosevelt; second, C. W. Ward, with Harry Fenn.

Fifty variegated—Patten & Co., with Gaiety; no second.

Fifty yellow—Backer & Co., with Eldorado; second, Patten & Co., with Dorothy Whitney.

Twenty-five roses—W. H. Elliott, with American Beauty.

One hundred single violets—Geo. W. Ayer, with Princess; second, William Sim, same.

One hundred double violets—H. F. Calder, with Campbell; second, J. S. Smiley, same.

Certificates of merit to C. W. Ward, for Alpine Glow, Mrs. Theodore Roosevelt, Sensation; to L. E. Marquisee, for Albatross.

The judges were: On seedlings, E. Dailledouze, Flatbush, L. I., Winfred Wheeler, John Barr and Theodore Hemgenstein, of Queens, L. I., on general display, Edward MacMulkin, E. Allen Pierce and Elijah Cartwright.

Notes.

George W. Sutherland, of Natick, has purchased the greenhouses and estate of the late James Sutherland, Jr., of Athol.

William J. Stewart left Sunday for Milwaukee to attend the meeting of the executive committee of the S. A. F. F. R. Mathison was unable to go owing to the severe illness of his wife. I am glad to announce, however, an improvement in Mrs. Mathison's condition.

Spring Exhibition of the Massachusetts Horticultural Society.

The Spring show opened at Horticultural Hall on Wednesday at noon, to close Sunday evening. The show this year is not nearly so extensive as those of former years, a few large exhibitors of former years failing to make any display this season. Among the most notable absentees are Dr. C. D. Weld, Harvard Botanic Gardens, and Mrs. B. P. Cheney. Some of the other exhibitors, also, do not show so extensively as formerly.

On entering, the visitor is first attracted by a fine collection of well-grown cyclamen plants, staged by Geo. F. Fabyan, of Brookline, which are perhaps as fine as were ever seen at the Hall. Jason S. Bailey, of West Roxbury (A. J. Newell, gardener), also staged a nice lot of cyclamen of smaller size; as well as a tastefully arranged collection of palms, cinerarias, cyclamen and azaleas.

Cinerarias were superbly shown by Mr. Fabyan and Ed. J. Mitton (J. Lawson, gardener), whose exhibits were nearly equal in quality. Neither lot has ever been excelled at these shows in the past. Mrs. John L. Gardner (Wm. Thacher, gardener) also showed cinerarias, while farther down the hall was arranged a fine table of bulbous plants and hardy polyanthus, with a fine vase of Phanus grandifolius in the center. A fine specimen plant of Acacia heterophylla was sent in from Mrs. Gardner's conservatories and, by the way, the display of these acacias and ericas usually made at this show was conspicuous by its absence.

William S. Ewell & Son, of Roxbury, had the most extensive display of Spring bulbs, which comprised some very well-grown stock. The Bussey Institute made quite a display of bulbs, as well as an interesting collection of wild and cultivated plants, collected mostly through Pennsylvania. Another interesting display from the Institute was the collection of shrubs in pots, including Azalea Mollis, kalmias, rhododendrons, hydrangeas and lilacs.

R. & J. Farquhar & Co. staged a fine display of their Farquhar rose, banked by bay trees and palms, while along the front were arranged araucarias ferns and small palms.

Mrs. A. W. Blake, of Brookline, sent six or eight plants of Amaryllis hybrids.

Henry A. Dreer, Philadelphia, staged a lot of their golden pandanus, Pandanus Sanderi. Walter Hunnewell sent in three plants of Aucaba japonica in fruit. Jas. L. Little showed Azalea mollis and freesias. Lucius H. Foster had a few plants of the Anna Foster fern. W. Whitman staged hardy polyanthus and jonquils.

In the smaller hall Lager & Hurrell exhibited a fine lot of orchid plants, while two very fine displays of cut orchids were made by Walter P. Winsor, Fairhaven, and Col. Chas. Pfaff. J. S. Bailey sent in a fine specimen Cypripedium Rothschildianum bearing nine flowers. W. P. Winsor showed a nice Odontoglossum Rossii Magus.

In cut flowers, several displays were made on the opening day, though on the second and third day several other exhibits will undoubtedly be made. American Beauty roses were shown by W. H. Elliott and the Floral Exchange, of Edgely, Pa., which company also showed Queen of Edgely and Helen Gould. Mr. Elliott also staged a fine vase of Liberty. The Waban Rose Conservatories staged Ivory and Golden Gate of excellent quality. Hybrid roses were not shown at all.

Peter Fisher staged four fine vases of carnations, one each of Enchantress, Mrs. M. A. Patten, Governor Wolcott and Boston Market. S. J. Reuter staged a very good vase of Prosperity. Mrs. E. M. Gill showed a variety of Spring flowers.

(Report to be continued next week.)

F. J. NORTON.

UTICA, N. Y.—There were a very few of the bowlers out at our last meeting March 4. Following is the score:

	1	2	3	4	5
Rowlands	139	148	120	133	126
Hoffman	90	111	121	158	111
Spencer	130	143	110	106	87
McGowan	114	144	98	88	129
Cramer	137	97	101	92	126
MacLane	71	100	85	101	115

WASHINGTON, D. C.—The florist bowlers of the Capitol City rolled a game of tenpins on March 4, with the following result:

	1	2	3
W. H. Ernest	175	227	172
George Cook	164	161	160
George Shaffer	130	151	141
Charles Wolf	120	136	147
W. S. Clark	146	134	137
A. Esch	158	118	138
H. Pritchard	158	158	177
William King	127	172	161
J. Shine	139	119	140
W. Kimmel	122	108	137
J. Minder	109	116	113
Barber	116	125	124
Herold	109	106	118

C. W. W.

BOSTON.—On Friday of last week, on the Boylston Alleys, the Waban Rose Conservatories team defeated the Wm. E. Doyle five at candlepins by 18 pins. This makes the series even, with one win each.

WABAN ROSE CONSERVATORIES.

	1	2	3	Totals.
Donahue	74	86	79	239
Harding	82	78	100	260
Dunn	57	58	63	178

Friday this week the Doyle team rolls the Growers' team.

F. J. N.

Firms Who Are Building.

BATTLE CREEK, MICH.—H. M. Burt is building a new greenhouse, corner South avenue and Hussey street.

PHILADELPHIA, PA.—C. F. Knorr & Bro. are building a greenhouse 150 x 50.4, to cost $2,500, at Oxford Pike near Levick street.

NORTHEAST, PA.—Geo. H. Selkregg has purchased a strip of land adjoining his present property and will erect a greenhouse 20 x 80.

COATESVILLE, PA.—Rudolph Laird is formulating plans for eight new greenhouses, each 100 feet long. The buildings are to be erected by the Lord & Burnham Co., New York.

WASHINGTON, PA.—Work will be commenced April 1 on a number of greenhouses to be erected on the old McBurney farm, 2½ miles east of this town, for the growing of cut flowers and bedding plants. The farm was purchased by a number of local men. J. S. Salmons is at the head of the project and will live on the place.

Grand Rapids, Mich.

News of the Week.

The Grand River is flooded and traffic temporarily interrupted in consequence.

Nearly every florist is sick, either with a cold or the grip. Even the flowers are affected by the muggy weather.

We are informed that the old express rates on cut flowers have been restored, plus 5c. on each box shipped, to take effect March 11. The reduction has largely been brought about by the efforts of E. E. Pieser, of Kennicott Bros. Co., Chicago., who well deserves our thanks.

The price of glass has dropped since December. Glass 16 x 20, D. S. A., ordered then by the carload lot, was $3.88 per box net, f. o. b. Grand Rapids; now the same glass can be bought at $3.52 f. o. b.

Recent visitors included Harry A. Bunyard, of Clucas & Boddington, N. Y. a representative of M. Rice & Co., Philadelphia, and a brace of bulb men from Holland.

G. F. C.

Jointing Greenhouse Pipes.

The question is sometimes asked in trade journals how to joint greenhouse hot water pipes with Portland cement. The invariable reply, says the London Ironmonger, is a recommendation not to use Portland cement at all. There is no flexibility whatever in a joint made with this material, which is not strong enough to withstand the strains of expansion and contraction. It may serve well for a pipe that never gets hot; as, for instance, a drain pipe, but for a pipe conveying water having temperatures ranging over 100 degrees the joint must either be flexible or, if rigid, it must be very strong. There can be no doubt that the joints of these pipes are made water tight and sound by the yarn which is first calked in, but this requires to be backed up with something to keep it sound. In one instance, in a large grower's establishment, Portland cement was used, but every third joint was a rubber ring which accommodated the strains referred to. There were, therefore, two cement joints, then one rubber joint, in all the runs of pipe, and, it may be remarked, there were also plenty of men about who could remake a joint if one leaked here and there. For what may be termed temporary work, or piping which may have to be altered in some way, as occurs in growers' establishments, the rubber ring serves well. It is a ring of round rubber, which is stretched onto the spigot end of a length of pipe, and this is then forced into the socket end of another length This makes the joint, and nothing could be more simple, but it does not do for permanent work. The rubber ring may, however, be introduced in the latter, as an expansion joint here and there, if the other joints are of a rigid kind.

The commonest rigid joint, as being reliable and costing little, is made with iron borings. These are procurable from firms who supply the pipes, and the method of making the joint is as follows: The proportions of ingredients are, by weight, 100 parts of borings, which must be pounded if very coarse, 2 parts powdered sulphur and 1 part powdered sal-ammoniac. These are thoroughly mixed and then moistened with water, this being done about one to two hours before use, according to the dryness of the weather. Only as much should be made as can be used the same day. In making the joint the socket is calked either two-thirds or three-fourths full of yarn, and the remaining space with the borings mixture. The latter rusts into a solid, extremely hard mass, and as it swells slightly in setting it requires skill and practice to save getting cracked sockets. We by no means condemn the various patented expansion joints now on the market. Wherever the cost will admit one or the other of these might well be used, and their extra cost after all is not so great as is often assumed, as the saving in time (labor) is great, and the appearance is good.—Metal Worker.

New Bedford, Mass.

At a meeting of the New Bedford Florists' Club, officers were elected as follows: President, R. E. Nofftz; vice-president, J. H. Cleary; secretary, William P. Pierce; treasurer, H. V. Sowle; executive committee, E. H. Chamberlin, A. B. Hathaway and E. Y. Pierce. The club adopted the report of the committee recommending a constitution and by-laws. J. T. Munson, of New Haven, and a Mr. Zinkham, of New York, were admitted as honorary members.

BUSINESS DIFFICULTIES.

ATLANTA, GA.—A. B. Williams has made application for relief in bankruptcy.

Fumigating Kind TOBACCO POWDER
KILLS ALL APHIS IN ONE NIGHT
In a house 100x25 ft., at a cost of [illegible] pkg. will cost nothing if you [illegible] the express charges on it. Our booklet [illegible] for it. THE H. A. STOOTHOFF CO., 116, 117, 118 West St., N. Y. City

Canadian News

Hamilton.

News.

There is a good supply of flowers, including Easter lilies, in sight for Easter. A few days of bright weather would materially help the roses, etc., along. There has been very little sun for a week back, and the mild, damp weather induces mildew on roses.

S. Mills & Co. are running a cut flower branch in their department store. It has not assumed great proportions yet, but it is well known how department stores have cut up business in other places. They cannot be prevented from getting stock; a better way would be for the trade to make a determined effort to improve the retail store business. If it were done thoroughly and aggressively the department stores would see no opening for a flower department.

At the request of the City Improvement Society the Parks Board has taken over the care of the city shade trees, and we may now expect some system and judgment in the matter of pruning. The Improvement Society is also arranging a lengthy list of prizes to be awarded to citizens for the best flower beds, lawns, window boxes, etc., to be grown during the coming season. It has requested the trade to subscribe funds for one section of prizes. This they may do. It would be no more than proper, anyway, as the society has, by its efforts, greatly advanced the taste for floriculture.

Callers: W. S. Murray, representing Van T'Hof & Blokker, Holland, and J. M. Veldhuyzen Van Zanten, Lisse, Holland.

The Club Meeting.

The Club met on the 17th inst. There can be no Irish blood in the florists here (or they must all be forgetful), for, although shamrock was sold and worn in quantity by the citizens, not one of the boys at the Club did honor to Ireland's saint. Perhaps, though, their supply of shamrock was entirely sold out.

There was a good attendance, and Mr. George Cranston, pot manufacturer, was elected to membership.

E. J. Townsend, R. Potter and J. Fox, the committee to draft a scale of prices for the coming season, reported and handed in the result of their work. The scale includes all the principal lines of Spring plants. It was discussed item by item and altered in some instances; the rates are only fair living prices. There is no suggestion of a combine or a hold-up. If any one in the city selling these goods does not endeavor to maintain these prices, he is not consulting the interests of his business. No one can possibly show that present prices are sufficient; the scale of prices can be just as easily secured as any other, if every one stands together. The procedure of some growers, in past seasons, of growing all they can squeeze into their houses and selling them for ridiculously low prices, reminds me of the story about an old woman selling flowers in Covent Garden. "This plant," she told her customer, "I am selling at really less than cost, and only the large quantity which I sell enables me to make a living."

C. Webster was to have reported on what he saw at the Toronto carnation meeting. There was not sufficient time, however, and it was scheduled for next meeting.

D. C. Nixon, publisher of the Canadian Florist, was expected at the meeting in the interests of his paper. He evidently missed his connections somewhere.

After business, card playing was the order of the evening, and music was contributed by Messrs. Townsend, A. Bailey, Jr., and C. Webster.

BEAVER.

Montreal.

Mr. Fred Bennett, who is leaving Montreal for the West, was given a genuine surprise last Thursday evening, when about forty members of the Florists' Club met at Mr. Joseph Bennett's residence at Lachine, and presented him with a fine case of cutlery. Mr. McKenna made the presentation, and, in his usual serene and deliberate style, wished him health and success in his new field of work. Fred was completely taken by surprise, but made a fitting reply, thanking the boys for their kindness. An impromptu program of songs and recitations, rendered by the Misses Bennett, Messrs. Walter Wilshire, Harry Bunyard and Hayward, was thoroughly enjoyed by all. After a few games of euchre and after bouncing Fred, the boys returned home in the small hours.

As correspondent to The Florists' Exchange Mr. Bennett will be sorely missed; his news items were noted for completeness, and he was a zealous worker for Montreal; the trade appreciated Mr. Bennett's work in every way.

President Trussel has fully recovered from an attack of la grippe.

The Windsor Hall has been secured for the Chrysanthemum Show next November. Now, boys, grow some good stock and then exhibit it!

Trade good, with no change in prices from last report; white flowers very scarce.

W. C. H.

Ottawa.

The snow is nearly gone, gentle rains and bright suns having done the business very satisfactorily. We are now fairly launched in our legislative session, which will make business brisk. The state dinner, which was in pink, used large quantities of tulips, which are very good this year. The drawing room called for even more hand bouquets than in former years. It was noticeable how many carnation bouquets were carried, the excellent quality of carnations causing many to use them in preference to the high-priced roses. Valley bouquets were noticeable. Lilac, daisies, and erica also came in for a share.

This is Shamrock Day, and our true shamrock is selling better than ever. C. Scrim sold 500 pots yesterday, and other florists have had large sales. There is quite a demand here for good priced center pieces for shamrock parties. We make them by putting a 6-in. pot in a 10-in. pan, and a 4-in. inside the 6-in., then planting the whole with 2½-in. plants when young. This, when well grown, makes a pretty green bank, bringing a good price.

There has lately been quite a demand for funeral flowers.

C. Scrim has returned from a visit to New York.

The Landscape Artist

RESIDENTIAL SITES AND :: :: ENVIRONMENTS :: ::

.. BY ..

Joseph Forsyth Johnson

F. R. H. S., CONSULTING LANDSCAPE GARDENER AND GARDEN ARCHITECT

A KNOWLEDGE of landscape work which will enable one to undertake successfully the work of gratifying the desire of cultivated people for tasty, attractive surroundings for their houses, be they 25 x 100 ft. plots or broad acres, is well worth all the effort that may be required in the learning. If you study "Residential Sites and Environments," a practical work by a practical man, easily read and assimilated, it will give you a knowledge of the essentials and possibilities of landscape gardening that will enable you to avoid costly errors and to make your own home grounds, or those of your customers, a "joy forever."

Illustrated with over fifty descriptive Plans, Diagrams and Illustrations, with lucid descriptive text and all necessary information for the laying out of Home and Public Grounds, showing principles and adaptations of planting suitable to all requirements from Villa to Mansion. Superbly printed, in new clear type, on the finest wood cut paper, cloth. Price, $2.50, by mail, postpaid.

FOR YOUR CUSTOMERS

Success with House Plants

.. By ..

LIZZIE PAGE HILLHOUSE

A COMPLETE text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 252 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, $1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller. Send for sample pages.

DEAN'S SYSTEM OF GREENHOUSE HEATING

By MARK DEAN

DO YOU WANT TO KNOW

HOW
- To determine the area of any greenhouse?
- To tell the amount of radiation necessary to heat the same?
- To place the heating pipes to best advantage?
- To figure what the pipes and fitting will cost?
- To set up a boiler?

DEAN'S SYSTEM OF GREENHOUSE HEATING is the name of a new book which will fill a long felt want, because it has tables all figured out giving the amount of radiation and number of pipes necessary for greenhouses of all sizes, formulas for obtaining different temperatures, radiation per lineal foot of pipes of various sizes or the number of feet of radiation in any number of feet of pipe, list prices of pipe, pipe fittings, etc., besides much other valuable information. Handsomely bound. By mail, postpaid, $2.00.

Cyclopedia of American Horticulture

By L. H. BAILEY

Of Cornell University

ASSISTED BY WILHELM MILLER AND MANY EXPERT CULTIVATORS AND BOTANISTS.

THOUGH distinctly an American work, not only plants indigenous to the North Americ continent are mentioned, but also all the species known to be in the horticultural trade North America, of whatever origin. It is really a survey of the cultivated plants of t world.

The chief characteristics of this great work are comprised in our describing its source, sco and general features. It is **Authoritative** since its contributors are the best specialists America, and there will be at least 5000 signed contributions from the best-known horticulturis cultivators and botanists in this country and in Europe. It is also most **Comprehensive** that it presents for the first time in carefully arranged and perfectly accessible form the b knowledge of the best specialists upon greenhouse and garden practice, fruit growing, vegetal culture, forestry and the like. It is moreover fresh, entirely **Original;** not a rehash of o material, old cuts, etc. The articles are specially prepared and illustrated for this work alon while the trained botanist discusses the botanical features of the important commercial plan practical cultivators submit observations on their culture, marketing, and the like, so that t reader has before him the very best practice in the most favorable localities for the perfection any fruit, vegetable or economic plant. The arrangement is very systematic, clear and convenie for ready reference.

In Four Quarto Volumes. Illustrated With Over 2000 Original Engravings. Price $20.00.

The Princess of Wales Violet

Violet growers cannot afford to to be without this grand and popular variety. Growers in the vicinity of Boston know that this Violet is rapidly and surely becoming more popular and sells for higher prices than any other variety, either double or single, growers in other sections have a great opportunity for taking up and growing this variety.

I have the largest and healthiest stock in the country and am booking orders NOW for strong young plants for April and May delivery, at $2.00 per hundred; $15.00 per thousand. 500 at thousand rates.

75,000 CHOICE PERENNIAL PHLOX 75,000

ONE OF OUR LEADING SPECIALTIES

Strictly first-class varieties, distinct and decided colors; strong, field-grown plants that were cut back and potted up into three-inch pots late in the fall, with from 3 to 6 eyes, that will make a better display of flowers than plants dug from the field; this stock must not be confounded with small winter propagated plants, such as are usually sent out.

Athis, deep pink, overlaid salmon, crimson eye.
Andreas Hoffer, a fine early white.
Aquillon, carmine rose, shaded salmon, crimson eye.
Bridesmaid, pure white with large crimson eye
Beranger, white, suffused pink crimson eye.
Blanc Nain, large dwarf white.
Bouquet Fleur, white, with deep rose eye
Crystal Palace, white, with lilac markings and center.
Cross of Honor, magenta, bordered white, in the form of a Maltese cross.
Cyclon, white, suffused rosy lilac, dark rose eye.
Champs Elysee, fine rich purplish crimson
Duguesclin, white with dark crimson center
Eclaireur, purplish crimson, very bright, with light halo.
Esclarmonde, lilac suffused white, deep rose-colored eye.
Etoile du Nord, purplish crimson.
Eugene Danzenvillier, lilac with white edge and center.
Faust, pure white with cherry-red eye.
Henry Murger, white with bright rose eye.
Jeanne D'Arc, a fine late white.
Jules Finger, tender rose with deep rose eye.
Lilipot, bright magenta with crimson eye.
La Fondre, deep purplish crimson.
La Nuit, deep purplish crimson.
La Vague, soft rosy pink with red eye.
Lothair, salmon-red with carmine eye.
Mlle. Marie Kuppenheim, a good dwarf, pure white.
M. Marey, salmon rose with deeper center.
Marquis de St. Paul, deep rose, overlaid salmon.
Michael Cervantes, pure white with bright red eye.
Mrs. Dora Umgeller, rich deep rose, a strong variety.
Moliere, salmon rose, deep rose eye.
Nettie Stewart, pure white, occasionally marked rose.
Ornament, rosy magenta with crimson eye.
Professor Schlieman, salmon rose with carmine eye
Peach Blow, delicate pink with white markings.
Pantheon, fine deep salmon rose, free and effective.
Pacha, deep rose with bright eye.
P. Bonnetin, magenta overlaid salmon.
Robert Werner, tender rose with deep rose eye.
Semiramis, purplish magenta.
Simplon, white suffused lilac, dark rose center.
Sylphide, light rose and white, with deep center.
Schlossgartner Reichenau, bright rose, dwarf and free.
Sunshine, salmon pink with deep red eye.
Thebaide, dwarf salmon red with crimson eye.
Wm. Muhle, salmon pink with dark crimson eye.
Zouave, largest purplish crimson, red eye.

Any of the above varieties, 75c. per doz.; $6.00 per 100; $50 per 1000

THREE CHOICE RED PHLOX VARIETIES THAT ARE ALWAYS SCARCE

COQUELICOT, a fine pure scarlet with deep carmine eye
JOCELYN, bright salmon red, very brilliant
MATADOR, Bright orange scarlet, cherry-red eye
} **$1.00 per doz.; $8.00 per 100**

St. Paul.

Among Growers.

Minneapolis has come to the front florally the past three years and now has some of the best stores and greenhouses in the Northwest.

The establishment of Wm. Donaldson & Co., presided over by James Souden, at 36th street and Sixth avenue, South, is a model one, and one of the best in the country. The large rose house, 240x35 feet, built on a gentle southern slope, shed roof, is by far the best rose house in the State. American Beauty flourish here with 6 and 8-foot stems, while Bridesmaid, Bride and Golden Gate are equally strong. Next season he will plant Ivory and Sunshine.

In carnations, some very good varieties are grown, including Norway, Lorna, Queen Louise, Prosperity, Mrs. G. M. Bradt, Guardian Angel, Mrs. Frances Joost and other favorites. In violets, Lady Campbell and Princess of Wales were one sheet of blue. The single one, however, should be grown cooler than the double, so that double ones in the same house with the singles were rather short stemmed. Mr. Souden has been forcing lilacs all Winter for cutting purposes. They were extra heavy pot-grown plants, and produced on an average 18 blooms, which retailed readily at $3.00 per dozen. A large number of plants are held back for Easter blooming, and should prove most profitable for that occasion.

He also has a fine lot of lilies and H. P. roses, azaleas, hydrangeas, etc., which will be in fine condition for Easter sales.

Mr. Souden devotes nearly his entire time to the greenhouses, the store trade being looked after by R. Latham. Their trade is almost wholly local. But flowers are not the only products of Minneapolis greenhouses, as I ascertained by visiting Fred Busch, the veteran vegetable grower, located at Fiftieth and Lyndale avenues. Mr. Busch is well known to the florist fraternity, having been prominent in national, State and local circles. His range of houses contains upwards of 60,000 square feet of glass, and one house is the largest in the State, being 60 feet wide and 300 feet long. At the time of my visit the houses were nearly all planted to lettuce, in all stages of growth. The Grand Rapids variety is grown exclusively and five crops are cultivated during the season. To counteract stem rot, lime is mixed with the soil in preparing the beds. Cucumbers have already been planted in several houses, and will be in crop after the lettuce is all cut. Tomatoes have also been planted, and are beginning to set their fruit, which should be ready for the market in about four weeks. Lorillard is the only variety grown. In the early Fall the tomato plants were hardly affected by club root. Mr. Busch turned off all steam and allowed the houses to freeze solid. This killed the club root, and his plants are all strong, clean and healthy. In two lean-to sheds is grown rhubarb. This is a very profiitable crop and is grown almost exclusively in the dark, as the stalks are then straighter and more tender. When about ready to cut a few days of light colors them up in good shape for market. Two more lean-to sheds are devoted to mushrooms, which are, generally speaking, a very profitable crop. Radishes and parsley are also grown in quantities and are quite remunerative.

By freezing his largest houses during the coldest weather, Mr. Busch has reduced his coal bill and killed the club root at the same time, and is several hundred dollars ahead by the transaction. He is one of those careful far-seeing men who figure ahead before plunging into a project. If more of the florists used a like caution, better business would result.

Minneapolis has become quite a vegetable growing section. There are three smaller institutions located near Mr. Busch and others in other sections of the city. Their products are sold at home and shipped to Duluth, Fargo and other cities, and occasionally to Chicago.

Worcester, Mass.

During the week of March 16 Horticultural Hall was an unusually busy place. Wednesday and Thursday the Massachusetts Fruit Growers' Association held their annual convention. There was a large attendance, with speakers from several States.

Wednesday evening the Horticultural Society held their annual reunion and banquet, followed by dancing.

Thursday afternoon was the first regular meeting for the display of vegetables.

Saturday afternoon the Bee Keepers' Association held the regular monthly meeting.

The few days of mild weather quickened the florist trade to a certain extent, but the following cool spell put it back where it was before.

Charles W. Menck, for the past 18 years employed by H. F. A. Lange, the florist, died at his home, 78 Lafayette street, March 6. He was born in Norwich, Conn., and was 31 years old. He leaves a wife and one child.

s usual at this time of the Lenten son trade has taken quite a stim- s, and for the past week has been king up in grand shape. All report s good with prices back to almost same grade as before Lent. There y be some clean-up sales on all kinds stock at rather low prices, bu. the k of it is sold at prices satisfactory all concerned. Shipping trade has n more satisfactory for the past k than at any time since Lent be- , and more orders have been re- ed since the express rates were re- red to their former standard than any time before of the same dura- . Some houses report a return to r standing orders, which were taken m them a short time after the in- ased express rates went into effect. this cloudy weather which we have for some time continues, there is doubt but that there will be a fur- r increase in the prices of all kinds stock coming to this market. The sensus of opinion of the growers ms to be that the stock will depend the state of the weather between v and Easter.

he executive committee of the S. A. stopped for one day here on their y to Milwaukee, and in the evening e given an informal banquet by sev- l of the local craft, at which an en- able time was spent. The time was sed in speech-making, interspersed songs. President Burton's speech, which he referred to the efforts be- made by those of the craft in the st to make the coming convention Milwaukee the largest and most able ever held, was well received, was also the one by J. C. Vaughan cerning the efforts that were being de in the West towards the same .

. J. Hauswirth, in reference to the rts in connection with the S. A. F. vention, and especially that of vling, in which he is an enthusiast, l of what the Chicago boys were go- to do in the way of training for the test next Summer. In the course his remarks he stated that to take sporting parts from the convention uld mean a loss of $500 to the S. A. which was corroborated by Secre- y Stewart. Others present made rt addresses, songs were rendered by ssrs. Wallace and Carter, and some personifications by Mr. Woodruff re well received. In this way the ning was soon passed.

t the last club meeting there was a small attendance, and only tine business was transacted. Such ager atendance is to be deplored, l some effort should be made to in- est the members, with the conven- n of the S. A. F. so near. The pres- time should be one of the most ive in the history of the club, for s will be the stamping ground of mbers from all over the country coming Summer. So arise, shake that Rip Van Winkle feeling, get ether and make the Chicago Florists' b one of the banner clubs of the ntry! Awake to the needs of the ft, open your eyes and arouse your- ves, and become aware of what will expected of this club for the coming nmer. Lay all personal animosity de, put your shoulders to the wheel one person, and you will surprise rselves at what you can accomplish.

he meeting called at P. J. Haus- th's store, looking toward the form- on of a club to bowl at Milwaukee ing the convention, was well at- ded, and great enthusiasm shown. J. Hauswirth was elected president, rge Scott, vice-president; George llery, secretary and treasurer, and rles Balluff, captain. A series of rty games are to be rolled for the ection of a team, the opening ones April 14. Each member is to pay entry fee of $1.00 and must bowl 21 more games to entitle him to take t in the finals. The ten highest men the conclusion of the series will then vl to determine who will constitute six-man team to represent Chicago.

isitors in town: J. Burton, G. C. tson, Philadelphia, Pa.; F. A. Belt, rling, Ill.; E. J. Fancourt, Philadel- a; A. Wallace, New York; Secretary wart, Boston, Mass.; R. Tesson, St. uis, Mo. ROBERT JOHNSTONE.

St. Louis.

Florists' Club Meeting.

The attendance at the club meeting last Thursday was not very encouraging to the officers. Only 16 members were present, and they enjoyed a pleasant afternoon listening to interesting proceedings.

The meeting opened at the usual time, two o'clock, with President Dunford in the chair. Mr. Dunford looked well after a three weeks' visit in Florida.

The president was in a cheerful mood and read an interesting paper on what he had heard and seen while on his visit. His paper was much appreciated by the members.

The express committee reported that the express rates had been restored to the old schedule. The entertainment committee, having closed their work, were discharged with thanks for their good service.

Walter Gillies was given the scholarship of the club, to Shaw's Garden through letters of recommendation which were a credit to Mr. Gillies.

The applicants elected to membership were W. J. Pilcher, of Kirkwood, and A. G. Bentzen, of St. Louis. Mr. W. E. Guy, of Belleville, was reinstated to membership. New applications were received from Walter Gillies, of Shaw's Garden and D. R. McAnally, of South St. Louis.

The club had on exhibition the new golden yellow rose Franz Deegen, sent by the South Park Floral Co., New Castle, Ind. The judges, Messrs. Ammann, Beneke and Tesson, voted it a grand yellow rose; big improvement on Perle, and of good keeping quality.

Dr. Halsted, of Belleville, who is mayor of that town, invited the club to hold its next regular meeting in his city. The invitation was accepted, and the meeting will take place on Thursday, April 16, being the third Thursday instead of the second. At this meeting the club will hold its annual rose exhibition. Three prizes have been offered, $5 for first, $3 for second, and $2 for third, for the best vase of roses, to be competed for only by local growers. This, with a number of essays, will make an interesting meeting, and a large attendance is expected.

Heard About Town.

Walter Sanders has returned from New York, where he worked for Small & Son the past seven months.

Eddie Gerlach is back at his post at Kuehn's, after a week's illness. Eddie says he is a little down in weight, but still in the ring.

It is said that W. J. Pilcher will grow carnations next season, and will build a new house or two this Summer on Florists' Hill, Kirkwood.

Two wholesale men, Kuehn and Berning, who were laid up with la grippe, are again attending to business as usual. The third one, Frank Ellis, claims he is too tough to be sick. He looks it since removing his mustache.

ST. PATRICK.

Lenox, Mass.

The Lenox Horticultural Society held a "carnation night" at its rooms, Saturday evening, March 7, the carnation being exhibited and methods of culture and development discussed. Carnations were shown from the greenhouses of John Sloane, George H. Morgan and H. H. Cook, and diplomas were awarded. The next meeting will be held on the 18th, when W. A. Manda, of Orange, N. J., will speak on "Coniferæ and Evergreens."

Hartford, Conn.

Club Meeting.

The annual meeting of the Florist Club was held Tuesday evening and was well attended. The following officers were elected for the ensuing year: President, Theo. Wirth; vice-president, J. F. Huss; treasurer, Robert Scrivener; secretary, A. Frey; board of trustees, T. J. McRonald, G. S. Osborn, J. F. Coombs.

The retiring officers and board of trustees presented the club with a block and gavel made of the wood of the Washington elm, which has been recently cut down. The tree stood in front of the Wadsworth Atheneum, on Main street, and considered historic from the fact that Washington once stood under the tree. The block is mounted with silver with the seal of the club engraved on it. The head of the gavel is octagon shape, also mounted with silver. On one side of the gavel is engraved "Block and gavel, made from wood of the Washington elm, which was removed February, 1903; presented to the Hartford Florist Club by the first retiring officers, 1903." On the other side of the gavel are the names of the retiring officers, as follows: "T. J. McRonald, president; W. W. Hunt, vice-president; J. F. Coombs, secretary; Theo. Wirth, treasurer; board of trustees, John Coombs, G. S. Osborn and J. F. Huss."

The secretary's report showed a good gain in membership the past year. The treasurer reported a good balance on hand after all bills were paid. It was voted to present the retiring secretary with a memento in appreciation of his services during the past two years, and a committee was appointed to procure something suitable. A. C. Sternberg gave an interesting talk on "Fruit Culture in Connecticut During the Past Fifty Years." J. F. COOMBS.

Louisville, Ky.

Notes.

Owing to the very warm and damp weather we have been experiencing for some time, the outlook for bulbous flowers for Easter is not encouraging. Jonquils are now blooming outdoors and tulips and hyacinths are showing color. Azaleas, rhododendrons and plants of this class are also coming very fast, and instead of urging them into bloom it will be necessary to retard them as much as possible.

Mrs. C. B. Thompson is making many improvements at her Fourth street store. Beside papering and painting the store she has an entire new set of fixtures, including a large and handsome ice box. She is also adding a conservatory, and, being a leading dealer in gold and fancy fish, she has had a large pond arranged to properly handle them. A. R. B.

HOT BED SASH AND FRAMES

Adapted for Growing Vegetables, Violets, Etc.

THE BEST IS THE CHEAPEST

Our Hot Bed Sash are made of **RED GULF CYPRESS, Strictly Free from Sap.** They are made in a thorough manner and combine strength with durability. Joints are white leaded and fitted with steel dowel pins. Each sash is furnished with an iron rod running through the sash bars, tying the sash through the center and supporting the bars. They are glazed with good quality double thick glass and painted two coats. We keep them in stock; 3 ft. x 6 ft. Other sizes made to order.

Also carry in stock **Cypress Hot Bed Frames** to hold any number of sash. These are portable so they can be readily taken apart for storage when not in use.

Freight Allowance covers most points in Eastern and Middle States. SPECIAL SPRING TRADE EDITION

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

ol. XV. No. 13 NEW YORK, MARCH 28, 1903 One Dollar Per Year

10,000 POTS OF

ILIUM LONGIFLORUM

FOR EASTER.

We have an exceptionally fine lot of these, and plants are in perfect condition, fine, healthy foliage, and A No. 1 in every respect, averaging from four to t buds each. We are now booking orders for Easter delivery or earlier at rate of

12c. per Bud or Flower.

CUT LILIES AT SAME PRICE.

In ordering please state whether plants in pots or cut lilies are wanted.

Customers at a distance wishing to procure a supply will find it safer to order y, just before the flowers open, as plants can then be shipped cheaper and with ter safety. You will then have the plants on hand and avoid the rush at the minute. A great many of our customers order in this way, and find it a decided ntage. We can ship at any time now plants selected so that they will just come bloom in nice shape the week before Easter.

We should be glad to have buyers from near-by points call at our Scarborough nhouses and inspect the stock. Plants can be selected and laid aside and re- ed at any time and delivered when wanted.

We have also an Exceptionally Fine Stock of

cus Elastica, Kentias, Boston Ferns, Araucarias,
Large-sized Latania Borbonica, for Decorating, Etc., Etc.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

Mr. and Mrs. Philippe de Vilmorin, of Vilmorin, Andrieux et Cie., of Paris, are at present sojourning in Tokio, Japan.

ELIZABETH CITY, N. C.—M. L. Davis has opened a seed store on Water street.

ROCKFORD, ILL.—H. W. Buckbee Seed Company is to erect a four-story seed house for the accommodation of the concern's constantly growing business.

INDIANAPOLIS, IND.—The Everitt Seed Company has been incorporated with a capital stock of $150,000. A. Eshbach, formerly manager of the Vail Seed Company, is one of the new active members of the firm. I. B.

TORONTO.—The Steele Briggs Seed Co. has purchased the business formerly owned and conducted by J. M. Perkins at Winnipeg, and it will in future be run under the company's name. E. F. Crossland has been appointed manager of the Winnipeg branch.

PHILADELPHIA, PA.—Fifty bushels of sugar corn seed were sold for $620 March 23 by a Market street seed dealer. Forty bushels brought $13 a bushel and the remainder $10. These prices are the highest ever recorded and are due to the failure of the crop last year. Stocks of these seeds are very low and quotations are being firmly held.—New York Times.

ST. PAUL.—The warm weather has kept everyone on the move, and orders are being filled and shipped as rapidly as possible. Fabulous prices are being offered for Evergreen sweet corn, but there is none to be had, and many fields will not be planted owing to lack of seed.

European shipments are still arrivin and are very welcomely received, even at this late date.

Grass seeds are selling freely, but oats and potatoes move slowly.

Field corn is reported scarce, as many large lots failed to germinate.

VERITAS.

The Old Farmer's Almanac says, "About this time look out for showers and mild weather." The seedsmen of the country who handle bulbs say, "About this time look out for the Dutchman." They are again here in large numbers, and a great many of them with long faces, as a result of their visits to the florists, to whom they sold bulbs last season. The scarcity of coal, and, on the whole, rather unfavorable weather during the Winter, have made bulb growing for the American market a trifle unprofitable this season; and the Dutchmen are wondering where the money is coming from to pay them.

None of these Hollanders yet seems able, or willing, to quote close prices for this Fall's shipments. They report that spiræa will be higher in price; that the leading kinds of narcissus and hyacinths have suffered by the weather, consequently will be in short supply and have a higher market value than last season. They also say that several varieties of tulips are scarce, especially red shades, and that the prices on these will advance also. Altogether, they expect to obtain more satisfactory figures than they have done for several years.

The French situation is peculiar. The dealers who buy from the growers and export are a combine. The growers are also a trust—the one holding out for low and the other for high prices. Neither of them seems willing to make concessions.

It seems likely that Narcissus Paper White grandiflora will sell at from $1.00 to $2.00 higher than they did last Spring. The price the Frenchmen are

asking for white Roman hyacinths is 100 francs and over. This figure, when expense of shipment to the seaboard, port expenses at Marseilles or other French port, ocean freight and duty, are added, will prohibit the American florists from planting white Roman hyacinths next September.

The recent reports from Bermuda indicate that the supply of both Harrisii and longiflorum lily bulbs will be shorter than a year ago. The bulbs will be later in ripening, and the quality better. If American florists could only make up their minds to await shipment until the end of August, or early September, instead of June or July, there would be less complaint of disease and non-rooting and flowering than there is now.

From Japan the news is that the larger bulbs of all varieties are scarce; longiflorums 5 to 7 and 7 to 9 will hold about at last year's figures; sizes above these, 15 to 25 per cent. higher than they were a year ago. There is also a difference in the prices of all L. speciosum and auratum, but especially on the 9 to 11 and larger bulbs.

A.

European Notes.

Climatic conditions remain much as last mentioned, some heavy showers of rain serving, however, to keep cultivators off their ground, which is, perhaps, a blessing in disguise, as early sowings would surely bring many failures, and merchants would be unable to supply several important items in the renewed requirements.

In England it has stopped the sowing of stock pease—a very important matter. This is without doubt a good thing, as there will not be so much chance of their rotting or being caught by late frosts, and as the vitality is not of the best this year, a bad start would certainly destroy a large percentage of them.

EUROPEAN SEEDS.

French Bulbs.

Editor Florists' Exchange:

One of the puzzles at present confronting the florists of America and Canada is the price charged for Roman hyacinths by the French growers, and it has struck me that something must be done to cope with the wily growers in France, who seem never to know when they get enough for their bulbs. At present, prices are not fixed, and the figure asked is twenty to twenty-two dollars per thousand. Can any grower make any money growing Roman hyacinths at this price, even provided the crop is good and all the flowers are sold? Remember this is the price charged in France!

Now, the matter lies entirely in our own hands; and when American cultivators realize this fact, we can bring the French growers to sell their bulbs at a reasonable figure where it will pay them and pay the growers on this side. Let us join hands in doing without Roman hyacinths for one year and the thing is done. No one will by this act suffer in any way. Roman hyacinths are not such a necessity as would at first sight appear, and the country would never miss them for a year or more. What say you to this proposal, brother florists across the line and in Canada? I am willing to join any company of men to accomplish this end. I would like to hear from others on this matter, for as yet there is plenty of time; but remember it must be done by all, or none at all.

IMPORTING: Do you import plants, bulbs, seeds, etc.? If so, we take this opportunity of presenting our House to you, both in New York and Chicago, for attending to your Custom House business and forwarding.

OCEAN FREIGHTS: We are the largest forwarders of plants, bulbs, seeds, etc., in the United States, and by reason of the vast quantity of goods we handle we are, at all times, able to secure the lowest rates of ocean freights and shipping charges. Rates on application.

FOREIGN AGENTS: We have agents in all of the principal ports in the world, through whom your goods could be shipped for consignment to us, and we would be pleased to give you their names and full shipping directions on application.

MARINE INSURANCE: We can attend to Marine Insurance on all shipments consigned to us by having an open Marine Insurance Policy, which covers goods from the time they are shipped abroad until they are delivered to the Importer's stores or Warehouse. We will be pleased to give rates on application.

FORWARDING: We are the Import Freight Agents of the Delaware, Lackawanna & Western Railroad Co., at New York, and ship over various other lines. We attend to forwarding of goods promptly on arrival of vessel. We can pay duties and freights at New York and charge forward on goods or forward in bond, where shipments are destined for an interior port where there is a Custom House.

CONSIGNMENT: We would suggest in order to avoid delays and extra expenses that you have your shipments consigned directly to us at New York City.

75,000 CHOICE PERENNIAL PHLOX 75,000

ONE OF OUR LEADING SPECIALTIES

Strictly first-class varieties, distinct and decided colors; strong, field-grown plants that were cut back and potted up into three-inch pots late in the fall, with from 3 to 6 eyes, that will make a better display of flowers than plants dug from the field; this stock must not be confounded with small winter propagated plants, such as are usually sent out.

Athis, deep pink, overlaid salmon, crimson eye.
Andreas Hoffer, a fine early white.
Aquillon, carmine rose, shaded salmon, crimson eye.
Bridesmaid, pure white with large crimson eye.
Beranger, white, suffused pink, crimson eye.
Blanc Nain, large dwarf white.
Bouquet Fleur, white, with deep rose eye.
Crystal Palace, white, with lilac markings and center.
Cross of Honor, magenta, bordered white, in the form of a Maltese cross.
Cyclon, white, suffused rosy lilac, dark rose eye.
Champs Elysee, fine rich purplish crimson
Duguesclin, white with dark crimson center
Eclaireur, purplish crimson, very bright, with light halo.
Esclarmonde, lilac suffused white, deep rose-colored eye
Etoile du Nord, purplish crimson.
Eugene Danzenvillier, lilac with white edge and center.
Faust, pure white with cherry-red eye.
Henry Murger, white with bright rose eye.
Jeanne D'Arc, a fine late white.
Jules Finger, tender rose with deep rose eye.
Lilipot, bright magenta with crimson eye.
La Fondre, deep purplish crimson.
La Nuit, deep purplish crimson.
La Vague, soft rosy pink with red eye
Lothair, salmon-red with carmine eye.
Mlle. Marie Kuppenheim, a good dwarf, pure white.
M. Marey, salmon rose with deeper center.
Marquis de St. Paul, deep rose, overlaid salmon.
Michael Cervantes, pure white with bright red eye.
Mrs. Dora Umgeller, rich deep rose; a strong variety.
Moliere, salmon rose, deep rose eye.
Nettie Stewart, pure white, occasionally marked rose
Ornament, rosy magenta with crimson eye
Professor Schlieman, salmon rose with carmine eye
Peach Blow, delicate pink with white markings.
Pantheon, fine deep salmon rose, free and effective.
Pacha, deep rose with bright eye.
P. Bonnetin, magenta overlaid salmon.
Robert Werner, tender rose with deep rose eye.
Semiramis, purplish magenta.
Simplon, white suffused lilac, dark rose center.
Sylphide, light rose and white, with deep center.
Schlossgartner Reichenau, bright rose, dwarf and free.
Sunshine, salmon pink with deep red eye.
Thebaide, dwarf salmon red with crimson eye.
Wm. Muhle, salmon pink with dark crimson eye.
Zouave, largest purplish crimson, red eye.

Any of the above varieties, 75c. per doz.; $6.00 per 100; $50 per 1000

THREE CHOICE RED PHLOX VARIETIES THAT ARE ALWAYS SCARCE

COQUELICOT, a fine pure scarlet with deep carmine eye

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President, D. S. Lake, Shenandoah, Ia., Vice-President, George C. Seager, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer.

ST. PAUL.—L. L. May & Co. are getting busy at their nurseries near Lakeland. Their large storage cellars are well filled with stock dug last Fall, and they are daily receiving Spring importations from England, Holland, and France. They report a very encouraging catalogue trade, while their agency business has been larger than in many years. This firm makes a specialty of fruits and ornamentals particularly adapted to the Northwest.

VERITAS.

NEW ENGLAND ASSOCIATION OF PARK SUPERINTENDENTS. — The Executive Committee of the New England Association of Park Superintendents met in Worcester, Mass., March 18 and arranged for the annual Summer meeting of the association, to be held in Albany, N. Y., June 23, 24 and 25, returning by way of the Hudson. The party, which included Messrs. Fitts, of Providence; Egerton, of Albany; Anthony, of Taunton; Richardson, of Concord; Parker and Wirth, of Hartford, and Pettigrew and Duncan, of Boston, was treated to a trip through the Worcester system, including the new Hadwen Park, being ably guided by Commissioners Hadwen and Hart and Superintendent Hemingway.

D.

LIME—SULPHUR WASH FOR SAN JOSE SCALE.—In the West, especially in California, where the San José scale and similar insects have been a great menace to fruit growing, the Lime-Sulphur-Salt wash has become the dependable means of repression. Tested in the East, some years ago, it received an unfavorable report, as it seemed to wash off the trees by rains before exerting much destructive effect on the insects. But tests made by the Experiment Station at Geneva during the past season show that, properly made, it adheres to the twigs and limbs remarkably well, even during such exceptionally wet weather as we had last Spring.

In the tests more than seven hundred trees, in five orchards, scattered well over the State, were treated with this wash. Only in one instance, when the foliage was too far advanced, was there any injury to fruit, leaf or twig, and this damage was slight. When applied before the buds began to swell their opening was retarded a few days, but within two weeks or so all difference between treated and untreated trees, in this respect, had disappeared; but later the untreated trees continued to lose vigor and healthfulness through the work of the scale, while the treated trees were practically cleared of the pests.

The mixture is made by boiling together 40 pounds of lime, 20 pounds of sulphur and 15 pounds of salt, in about 30 gallons of water. Boil for two hours; then add more water to make 60 gallons, and apply while hot, using a powerful pump and good nozzle.

Tests of other washes and interesting laboratory experiments to ascertain the effect of the different ingredients of this Lime-Sulphur-Salt wash are also reported in a recently issued bulletin.

Hardiness of Chamaerops Excelsa.

Editor Florists' Exchange:

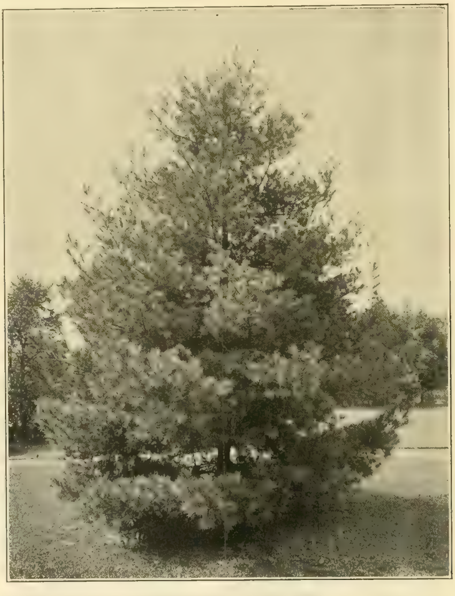
I always read with interest anything which comes from the pen of Mr. Meehan. Noticing he stated that Chamærops excelsa would stand 15 degrees of frost, I would like to say that I have one on my place which has been planted for four years. The past Winter has been very cold for Northern California, the thermometer going as low as eight degrees above. This has not hurt the plant in the least; but two years ago it froze the heart on the new leaf coming up, so that I took it with my finger and thumb and pulled it out quite easily, but could not tell the difference in two months afterward. The plant was not hurt at all.

I also have noticed that two plants, one of chamærops and one of Phœnix canariensis that I planted outdoors for a party four years ago have both lived until the past Winter, when the phœnix was killed outright, while the chamærops is as green as a Spring cabbage.

ABE CLEMO.

White Pine (Pinus Strobus).

The picture of the white pine, Pinus strobus, accompanying this note, is typical of the tree when in its young state. In many respects this pine is one of the most useful known, being not only highly ornamental on a lawn, but also good as a windbreak, and a most valuable timber tree. The photograph shows a tree on the estate of the late W. Walter Phelps, Esq., at Teaneck, N. J., and represents a tree planted ten years ago. From the general appearance of the tree it is safe to say it fairly represents a natural growth, without the assistance of a pruning knife. When desired to have such trees very bushy there need be no hesitation in using a knife. It does not object to a cutting in of its ends, and it responds by becoming so bushy that a bird could hardly get through it.



PINUS STROBUS—WHITE PINE.

The soft needles of the white pine call for its use in situations where the harsh ones of such sorts as the Scotch and the Austrian would not be tolerated; and then its silvery hue is very much in its favor.

What counts for much in its favor with planters is, that it transplants better than any other well-known pine. It has more roots of a fibrous nature than any other one known of those to be found in nurseries, and with but ordinary care it is pretty sure to grow, even when of a good size.

As a windbreak it is valued because of its hardiness and also because its needles, giving to the wind, are not damaged as are those of a rigid na-

Suggestions for the Season.

Examine well all bought in stock, to be safe from introducing San Jose scale and other insects. Cleaning of infested stock is much better done while the trees are dormant than when they are in leaf.

Set out a lot of willow cuttings now; Forbyana for giving tying switches later on; vitellina for its yellow bark, and Britzensis for its flame color in Winter. The vitellina and Britzensis sell freely, because of their beauty in Winter.

As soon as Winter is over, prune roses, not before. Cut down the everbloomers pretty close to the ground. the June roses but little, and running ones hardly at all.

Vitis Coignetiæ is famed for its grand Autumn color in Japan, and it bears out its reputation in England; but in our country it has failed to color at all, except in a very few isolated cases.

Those who want the fragrance of the grape without its fruit should possess themselves of some of the wild forms growing in our woods. Very many of them are infertile, yet of sweet odor.

Shrubs, or trees, of which doubts are entertained of their entire hardiness, are much better planted in Spring than in the Autumn. There is a whole season for them to become well rooted in their new location.

Set out a few fig bushes as soon as Spring opens, looking to burying them under ground on the approach of Winter. They bear fine crops of fruit treated in this way.

After fruit trees come to a bearing size it is better to cease cultivating them and keep them in sod, taking care to cut the grass short all the time.

Mahonia japonica has a larger and greener leaf than M. aquifolia, but the latter possesses a bronze color in Winter which is much admired. Mahonia repens differs hardly at all from M. aquifolia. Both are from Colorado and Oregon.

Osmanthus aquifolia is a Japanese evergreen of a holly-like appearance, and in Pennsylvania is quite hardy. It is the same species that old gardeners knew under the name of O. ilicifolia—holly-leaved.

The lovely, hardy fern, scolopendrium, which beautifies the old wall of Europe, is a native of this countr as well, though sparingly found. It i not well known that it is hardy here

Many Summer-blooming shrubs ca be made Autumn flowering ones by pruning them severely in early Spring The many spiræas of that class are ex amples of what are meant.

Spraying is an essential part of goo gardening in these days. It should b done with Bordeaux mixture before th buds start and after they are in leaf in connection with Paris-green.

Magnolia grandiflora has been trie again this Winter, as it was last, as house plant, and with the same suc cess. It holds its large green leave excellently, and when Summer come can be set out on the lawn as a tu plant.

Advancement of the Nursery Busines

Already the nurserymen are bus selling and digging stock and shippin orders. A visit to any nursery at thi time discloses activity prevailing in a departments, indicating another bus season, and it is to be hoped a pros perous one. Florists, too, who aim t have on hand, or to supply, orders fo hardy shrubs and plants, are begin ning to feel the oncoming of the tid and are looking up small evergreen and shrubs and vines for potting, a well as for the supplying of immedia sales. The Florists' Exchange is please to notice the activity in all depar ments of the trade, and thinks it entitled to some credit for the way has tried to make prominent the inte ests of the nurseryman and the floris Without doubt, the introducing an maintaining of a nursery departme as has been done has been a gre help to the nursery business. Th numerous illustrations of specime trees and shrubs which have appeare have made its columns almost an i lustrated magazine and must ha been most instructive to those not we acquainted with the subjects illustra ed, as well as interesting to those wh were.

The publishers of The Florists' E change were willing to make trial a bear the expense of a nursery depar ment, believing the furtherance of a that pertained to horticulture wou be to the interest of the trade in ge eral, as it would be to themselves, a in this they have not been disappoin ed. Those who advertise their sto in its columns find responses from large number of readers, and the a preciation of these advertisers has d termined the publishers to continue t nursery department.

The writer would be pleased to ha inquiries from correspondents at a time, and would endeavor to give t information desired.

Notes on rare trees, the hardiness trees and shrubs, comments on art cles which appear, and other comm nications of a horticultural nature w not only be welcome, but are solicite

Sending Out Good Stock.

How much it adds to a nurseryman reputation and profit to send clea nice-looking stock to his customer There is no excuse for the ill-appea ing stock so often sent away; in fac it is a surprise that the sender do not appreciate how much his intere suffers by following such a course. Th ill-shaped tree, which a few knife cu would beautify; the one with dea branches on it, and the one wit bruised roots, should never leave a nu sery in that shape. The time taken cut away such defects yields a b profit. A good reputation is what mu be secured as a basis for a profitab business.

Another matter requiring close atte tion on the part of the proprietor that of seeing that the stock sent up to what the conditions require. is a mistake to put in a dozen of tre an inferior one, as is occasionally don Throw the inferior one away; give th whole dozen fully up to grade, and th one thrown away will return a b profit. It angers a customer to find a lot of a dozen or a hundred mapl or other trees, one or more he despis for their appearance. He surmises, an sometimes justly, that it is an attem to pass off on him a tree which h would not have selected, and a loss o reputation and custom follows. Sh nothing but what, if questions a asked concerning it, satisfactory a swers thereto can be made.

The Sun on Evergreens in Winter.

In Fall, when the approach of Winter makes it timely, I have more than once referred to the fact that to keep he sun from evergreens was more han half the battle in their preservation throughout the Winter. It is a good time to refer to it again now, as his is when the value of the advice may be recognized. The Winter has not been severe, but in many situations there are rhododendrons and other broad-leaved evergreens which have been exposed to the full sun, and hose plants will show scorched leaves on the sunny side, if there are any at all scorched. In my own case, I have an example in a specimen of the Eng-ish laurel cherry. Cerasus lauro-cera-us. It is in a shady situation where the un reaches it only for an hour or two n the morning, never after 9 o'clock in Winter. Thinking this would not matter, it was not protected. As a result, he sunny side is badly browned, while he shaded side is perfectly green. And even on the sunny side, where one leaf haded another, the shaded one is perfect.

Just look around at this season for cases like this one, and then determine what is needed when November next comes.

Evergreens for Summer Sales.

This is the season of the year to prepare for a Summer trade in evergreens. n the Southern States it is now past he time for evergreen transplanting. n the Middle States it is a first-rate ime. There is no need to wait any onger than frozen ground compels be-ore planting evergreens. A fair trade s already assured to those who have been keeping evergreens in pots and boxes, and it is a trade that will grow. t must be generally known that Nurseryman Jones and Florist Smith keep evergreens in pots, then year by year heir trade will increase. It has come o be a conviction on the part of the public that nothing can be had in a nursery after the leaves have expanded n Spring. It will take time to counteract this. It won't do to rush the potting of evergreens on too great a scale—just a few of some of those most ikely to be called for will be sufficient.

Many florists whose establishments are near cemeteries have constant calls for small evergreens for setting in lots. The various forms of Arbor vitæ are very useful for this purpose, the globe and the golden-tinted ones especially so; and the green, golden and variegated yews. Rhododendrons and Euonymus japonicus are very valuable, as are the whole list of hardy evergreens of a dwarf character.

Nurserymen find sale not only for hose named above, but for the better class of evergreens as well. There is not so much call for the common kinds n Summer. It is more for a few of hose not so common, which are wanted by planters who have space for a few extra nice things. It is getting to be that Christmas, Easter and other festival occasions create a call for evergreens in pots, and to the florist especially this will serve as a hint to consider the sorts usually in demand then when selecting those for potting.

The word potting has been used throughout as the term applied to plants not in the open nursery; but pots are not necessary. Cheap wooden boxes are good for a year or two's growth, by which time a sale should be made.

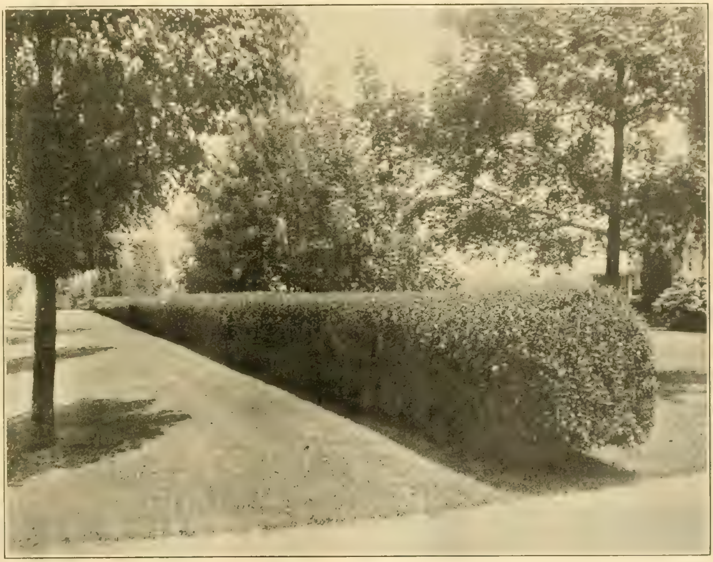
For cemetery uses, evergreens of a conical outline are in most demand, such as Irish yew, junipers, Lawson cypress in its many varieties, and the taller growing forms of Arbor vitæ; but the globe forms of Arbor vitæ, such as globosa, pumila, Hoveyi and Hoopesii, as well as the Tom Thumb, will not disappoint those who have a few for sale.

Vines in Pots.

Some time ago reference was made to the trade developed by nurserymen and florists in the line of potted vines. There is no class of hardy stock that sells so well in Summer as this. Those who have taken up this part of the trade say it is an increasing one every year, and one that can be developed. There are always those who can find room for a few vines besides those that really require them, and because of this, and the suggestion of shade which the heat of Summer demands, vines in pots are sure to be wanted. All kinds of hardy vines sell, but the greater call is for the Japanese ivy, Virginia creeper, wistarias, clematises, Kudzu vine and honeysuckles. The last-named lead those of the fast-growing type, such as Halleana and evergreen Japan preferred. Next the Japanese ivy, Ampelopsis Veitchii, is called for. Lately, because of the extraordinary rapidity of its growth, the Kudzu vine, Pueraria or dolichos, has had a great run. Wistarias especially the Chinese (sinensis), always sell. Clematis of all kinds sell, but the one leading all others is C. paniculata. Pot a good lot of this plant. It will be wanted.

Pot these or any other vines at once, placing them plunged in a bed of sand or cinders out doors, accessible to the hose, which will be required in Summer.

In many places vines, especially honeysuckles, will have started growing by this time. This will not matter, as if cut down pretty well, growth will start afresh, and, in many cases, the cutting well back is something that should be done anyhow. To have the vines attractive and salable be sure to stake them neatly.



A HEDGE OF CALIFORNIA PRIVET.

Hedge of California Privet.

It is not too much to say of the California privet that it is the most useful shrub for a hedge we have. Numerous shrubs have been used before the advent of this, and some are still employed, but in the whole list of available kinds not one could supplant this privet. Time was when the common privet, Ligustrum vulgare, was used, but it never entirely satisfied, though a good sort.

The accompanying illustration is of a hedge bordering the grounds of Mr. David Pepper, Chestnut Hill, Pa., and is on the summit of the hill, a bleak place, overlooking the beautiful Whitemarsh Valley. Yet, so far as known, this hedge has never suffered in Winter. The fact of its being on a hill insures thorough ripening of the shoots, and this in turn is security for its going through the Winter safely. When in hollows, damp and sheltered, where growth is late and succulent when Winter comes, the cold has been known to hurt this privet.

The present hedge has been properly treated from the start, as witness the bushy growth close to the ground. This comes from pruning back closely when young, that a thick base may result, which, when obtained, it is one's own fault if the regularity be not sustained. This hedge is much admired, as there is a wide grass sidewalk between it and the public road; besides that, the estate it encloses is of much beauty.

JOSEPH MEEHAN.

Cromwell, Conn.

A. N. Pierson has been taking advantage of the mild weather of the past week to ship lilies intended for Easter blooming. About 10,000 buds of L. longiflorum in pots have been started for various points. The heavier shipments are yet to be made. Most of these will go by freight, in carload lots, with men and oil stoves, if necessary, in the cars to look after and protect the goods. The weather up to the middle of this week has been unusually propitious for Spring shipping, but March is a treacherous month, and generally makes itself felt sooner or later. It will no doubt do so this year, even if it has to trespass on April's time.

Lilies are to be very fine for Easter. In fact, they have been so all Winter. The L. Harrisii, which are now about gone, have sold remarkably well since before Christmas. Roses, which have been scarce, are still slow in coming in and will not be very plentiful at Easter. This scarcity during the past four months has caused an unusual demand for bulbous flowers of all kinds, which are, consequently, running a little short. American Beauty, which were in full crop at Christmas, are now coming in again in fine shape and Easter will see some magnificent specimens.

One effect of the coal famine is seen in the unusual demand for rose stock, especially grafted. The young plants are looking remarkably well and are being shipped in large quantities to all parts of the country.

Among recent callers were E. D. Shaw, of Holyoke; C. F. Fairfield, of Springfield; D. A. Spear and Edward Welch, of Hartford; John Doughty, of New Haven, and Mr. and Mrs. G. F. Herthal, of Bridgeport.

H.

BRIEFS FOR BUSY FLORISTS.

CARNATIONS.—Young stock that is well established in flats or pots may just as well be put into cold frames now and the bench space it occupies can be utilized for other purposes, as the approach of Easter always brings with it a crowded condition of the houses. If the carnation plants, while in the frames, are given the same careful attention every day that was accorded them while they were on the greenhouse bench, the plants will do just as well, and make as good growth.

CANNAS.—Roots that were placed on the benches to start into growth are now making headway, and need to be put into pots. A five-inch pot is about the best size to use, and for soil any that happens to be convenient is almost good enough for cannas if a little well-rotted manure be added. It is always better to get the plants potted up as early as possible after the roots get fairly started, for if left too long on the bench they make roots very fast, and would require much larger pots than the five-inch size to accommodate them.

VERBENAS.—These plants are in good demand in many localities, and, as they only occupy bench space for a short period, they are, and always will be, profitable bedding plants to grow. Rooted cuttings of plants with flowers of distinct colors can be purchased so reasonably these days that a great many florists procure their stock in that way; and, to the busy man who does not care to carry over old plants, or raise others from seed, it is very convenient to buy the rooted cuttings at this time, pot them into thumb pots when they arrive and grow them on in a rather warm house, where they will make fine salable stock by the time they are to be planted outdoors.

HOTBEDS.—Where hotbeds can be made and frames used the greenhouses can be relieved of a number of plants, such as iresine, alternanthera, acalypha, centaureas, pyrethrum, etc. Just at this season every foot of bench room has to be utilized, and the more use we can make of our hotbeds and frames the less crowding of plants on the greenhouse benches is necessary.

CARNATIONS ROOTED CUTTINGS

NOVELTIES—This Year's Introductions

Mrs. Theodore Roosevelt. A brilliant shade of deep cerise pink, flamed with carmine. Finely formed, average 3 inch flower on strong stiff stems. Habit vigorous, early, free. Fragrance, strong clove. Selected, strong, well-rooted cuttings now ready. $12.00 per 100; $100.00 per 1000.

Alpine Glow. A deep salmon pink on opening, which finishes a bright Daybreak tint. Good sized bloom, averaging 2¾ inches at this season of the year. Flowers of great substance and a splendid keeper and shipper. An extra vigorous grower; early, profuse and continuous bloomer. Cuttings taken last April produce plants carrying 25 to 30 blooms by the first of March. We believe this will prove one of the most profitable of the daybreak colored carnations. Immediate delivery. Price, $8.00 per 100; $75.00 per 1000. Quantity limited.

Lillian Pond 2,000 selected plants from 2 inch pots, ready for immediate delivery, $10.00 per 100.

Her Majesty From 2 inch pots, immediate delivery, $10.00 per 100.

Marshall Field From 2 inch pots, immediate delivery, $12.00 per 100.

Gov. Lowndes Strong plants from 2 inch pots, for immediate delivery. $12.00 per 100.

INTRODUCTIONS 1902

Harry Fenn. Extra strong selected stock, $50.00 per 1000.

Viola Allen. Fine strong cuttings for immediate delivery, $50.00 per 1000.

Challenger. Extra strong stock ready for immediate delivery, $5.00 per 100; $40.00 per 1000.

Gaiety. $6.00 per 100; $50.00 per 1000.

J. H. Manley. We have propagated a few thousand extra selected cuttings from this variety which we offer at $6.00 per 100; $50.00 per 1000, to those who wish to give it a trial.

STANDARD VARIETIES

Mrs. Lawson. 5,000 fine strong cuttings for immediate delivery, $25.00 per 1000.

Golden Beauty. For immediate delivery, $50.00 per 1000.

Lorna. $25.00 per 1000.

Prosperity. Fine stock from 2 inch pots, $3.50 per 100; strong cuttings from sand, $25.00 per 1000.

Floriana. Fine stock from 2 inch pots, $3.00 per 100; strong cuttings from sand, $25.00 per 1000.

Cleveland.

Carnation Show.

The carnation night at the club s a grand success, there being more wers shown than was anticipated. nsidering the extremely warm ather of the past week, the blooms much better than many had ought they would be. In all there re about thirty vases of carnations two large vases of roses, besides ne other less important flowers. Most the growers of this city and its urbs were present, and many exessions of interest in carnations could heard.

ate Bros. exhibited a vase each of s. Lawson, G. H. Crane and Mrs. ances Joost. These were considered the judges as very fine. The same n staged a fine vase of Bride and idesmaid roses, which showed a rerkable growth and finish.

he J. M. Gasser Company exhibited vase each of Mrs. Lawson, The rquis, White Daybreak, Genevieve rd William Scott, Daybreak and ite Cloud, all of which were very l grown.

as. Wilson, of Glenville, showed two es of mixed carnations, consisting well-grown flowers of all the latest most improved varieties. A. mitt exhibited a remarkably well wn vase of Mrs. Lawson; H. Hart, vases of mixed varieties, all nice vers. C. Merkel & Son, of Mentor, showed a vase each of Mrs. Lawson Queen Louise, and one vase of ed varieties, showing good culture. y also had a magnificent vase of de, Bridesmaid, and Golden Gate es. H. R. Carlton, of Willhby, O., showed a well-grown vase rosperity, the flowers being as large any at this show. Smith & Son had ase of fifty blooms of their seedling nation, Magdalene, which in color quality gives Mrs. Lawson a close for supremacy. G. M. Nauman ibited Louis Nauman in grand form, ch was much admired.

seedling from Wm. Dilger, of Det, Mich., was a flower of good size. not a pleasing color under artificial light. The Chicago Carnation Company sent a vase each of Harlowarden, Marshall Field, Mrs. Potter Palmer, and Her Majesty, all of which were really fine flowers.

Other exhibits, including that of The J. D. Thompson Carnation Company, did not arrive in time, and caused some little disappointment. The judges were: Adam Graham, Sr., A. L. Brown, and A. M. Coe.

One new member was taken in at this meeting. G. W. S.

Cincinnati.

News of the Week.

Lent is passing quietly and is causing no decrease in business. All good flowers are selling out clean every day and more could be used.

One of our oldest firms, Corbett & Wilson, of College Hill, O., has dissolved partnership, Mr. Corbett buying out his partner and continuing the business.

Another good opportunity for some enterprising florist is to buy the Huntsman greenhouses, which are now for sale. These houses are situated in the Highands of Kentucky, back of Newport, and are admirably situated for growing roses and carnations.

Quite a number of the craft are sick with the grip, but, fortunately, no fatalities have occurred.

Spring openings are now on, and all the cheap stock in the market is readily picked up.

The progressive euchre at the clubrooms on March 26 will be quite an enjoyable affair.

The schedule for the flower shows to take place in September during the Fall Festival is now in the hands of the Fall Festival Committee; $1,000 will be offered in prizes and divided in such manner that will give the small grower a chance as well as the large one. The store man also will have an opportunity to show his skill in table decorations, as large premiums are offered for this display. Outsiders will be invited to compete, as this show will be open to all.

Vicitors: Martin Reukauf, Philadelphia; Mr. Dietrich, Maysville, Ky.

E. G. GILLETT.

Indianapolis.

Easter Outlook.

The outlook for Easter at the present time is not encouraging. The growers complain of the weather, and the advanced state of stock. Azaleas are from three to four weeks ahead of time, as are lilies and rhododendrons. Daffodils and hyacinths are to be seen blooming in the open, a fact rarely noted in this vicinity on the 23d of March. As it is, many of the growers are in better shape for Easter at the present time than three weeks hence.

News Jottings.

The florists of Indianapolis deeply sympathize with Sidney Smith, of Baur & Smith, in the loss of his father. Mr. Smith was well known in Richmond, Ind., his old home.

One noticeable fact here has been the lack of social functions during the Winter season. It seems as if society has overdone the matter of entertaining, and has suddenly gone to the other extreme. This remark does not only hold true in Indianapolis, but reports from all over the country bear out the assertion. While business so far has equaled, if not surpassed, that of former years, little credit can be given to the decorations. Most of the money comes in over the counter, in small cash sales. I. B.

Newport, R. I.

J. K. M. L. Farquhar, of Boston, lectured before the Newport Horticultural Society, Wednesday evening, March 18, on Horticulture in Japan. As usual, the lecture was a most interesting one, and thoroughly enjoyed by all present. Refreshments were afterward served.

Ernst Bowditch is constructing an Italian Garden for Mr. Berwind. J. H. Bowditch also is busy with landscape work.

Robert Laurie, formerly head gardener for Mrs. C. Vanderbilt, is now Eastern representative of Wright, Lilly & Co., the promoters of the Lucania tunnel. T. F.

Worcester, Mass.

Business has not been very brisk during the past week. The few warm days brought out a little inquiry for bedding plants, but wise ones are prophesying more cold weather.

St. Patrick's Day is not one that creates a demand for flowers, although H. F. Littlefield had a big run on green and white carnations.

Mr. Bryant, of A. H. Hews & Co., North Cambridge, dropped in on us a few days ago.

C. D. Thayer has again given up his store, and W. E. Sargent has assumed his business.

E. F. Breed and wife, of Clinton, have returned from Jamaica, where they went for the benefit of Mrs. Breed's health, which has been improved. Mr. Breed exhibited some three-foot Azalea indica in Boston last week.

H. F. A. Lange and Miss Emma Burkhardt were married March 19. Mr. Lange has been a florist in Worcester for more than twenty-five years, and is one of the best known German residents of the city. Mr. and Mrs. Lange left immediately after the ceremony for the South, where they will spend some time. CAROLUS.

Syracuse, N. Y.

George Ham, for the past twenty-five years head gardener at the State Institute for Feeble-Minded Children, has resigned his position. He was one of the earliest and most enthusiastic workers in the Central New York Horticultural Society, and a very successful exhibitor of chrysanthemums. Many of his seedlings were very fine; some have been disseminated. His friends, who are many, wish him every success in his new venture. His successor has been appointed. H. Y.

Dayton, O.

J. B. Heiss has bought of the Huffman estate six acres of ground. It is Mr. Heiss' intention to build a home on the grounds.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, ready for delivery in March, 75c. each; $7.50 per Dozen; $50.00 per 100. Stock limited.

GREAT REDUCTION

On the best list of Cannas ever offered; **50 Varieties,** all different shades; **strong healthy roots. Our Cannas never kept so well.** Prices have been lowered **25 per cent.** to reduce surplus. **This offer good for a short time only. No order accepted** for less than 100 roots, or 10 of a kind, at these prices.

The Princess of Wales Viole

Violet growers cannot afford to to be witho this grand and popular variety. Growers in t vicinity of Boston know that this Violet is rapid and surely becoming more popular and sells f higher prices than any other variety, eith double or single, growers in other sectio have a great opportunity for taking up a growing this variety.

I have the largest and healthiest stock the country and am booking orders NO for strong young plants for April and M delivery, at $2.00 per hundred; $15.0 per thousand. 500 at thousand rates.

WILLIAM SIM, Cliftondale, Mas

NEW PEDIGREE ROSES

Send for description and colored plate of o Six New Climbing Roses. These originated our own collection by careful cross-fertilizatio and are unquestionably superior to anything their class.

Edwin Lonsdale, pale lemon-white.
Wm. K. Harris, pale flesh color.
Wm. F. Dreer, creamy-white, pink edgin
Prof. C. S. Sargent, rich yellow a buff.
Robert Craig, yellow, shaded with apric
John Burton, delicate peach color.

All fragrant, very double, undeniably har and strong growers.

LTERNANTHERAS, 2 sorts, red and yellow, $17.50 per 1000	.30	2.00
GERATUM, Stella Gurney, Princess Pauline, and dwarf white	.30	2.00
SPARAGUS PLUMOSUS NANUS, 3½ in. pots, $25.00 per 1000	.50	3.00
SPARAGUS COMORENSIS, stronger grower than Plumosus, 2 in. pots, $25.00 per 1000	.50	3.00
CHILLEA, the Pearl, $20.00 per 1000	.40	2.50
HRYSANTHEMUMS, all the leading sorts, including Appleton, Eaton, etc.	.40	3.00

CANNAS.

All our Cannas are plants from pots, ready to move right off. Egandale, Mad. Crozy, Florence Vaughan, Mme. Berat, Souv. de Antoine Crozy, Paul Marquand, Chas. Henderson, Philadelphia, Duke of Marlborough, Pres. McKinley, and Queen Charlotte, $25 00 per 1000	.50	3.00
OLEUS, all the standard bedders, $18.00 per 1000	.30	2.00
UCHSIAS, in all the leading kinds, both double and single, fine, young stock	.40	2.50

We are large growers of Fuchsias.

ASMINE, Cape, 5 inch, 20 inches high, well branched	2.50	20.00

EMON, PONDEROSA,

has ponderous fruit; any one can bloom and fruit it. It blooms in large clusters, the individual flowers as large as a Tuberose. It is the best selling plant we have and we recommend it to all florists,

2½ in. pots	.50	3.00
to 5 in. pots	1.50	12.00

Plants 4 to 5 ft. high, 50 cts. each.

ANETTIA Bicolor, 2½ in. pots, fine, $20.00 per 1000	.40	2.50
OON VINES, blue and white. Now is the time to buy. Don't put it off until you cannot find them. We have 50,000; $27.50 per 1000	.50	3.00
RANGE Kumquat or Kin-kan, fine plants from 5 in. pots, 18 to 24 in. in height, well branched to bear at once	3.00	20.00

OUNG PALMS FOR GROWING ON.

From 2 in. pots. Fine stock.

Phœnix Reclinata	.50	3.00
Phœnix Canariensis	.50	3.00
Latania Borbonica	.50	3.00
Corypha Australis	.50	3.00
hamerops Excelsa	.50	3.00
Thrinax Barbadensis	.50	3.00
Areca Lutescens	.50	3.50

ROSES.

Hermosa, 4 in. pots	1.00	8.00
oupert, 4 in. pots	1.25	10.00
" 5 in. "	1.50	12.00
OSES, from 2½ in. pots.		
Hermosa	.50	3.00
lothilde Soupert	.50	3.00
limbing Soupert	.60	4.00
Gruss an Teplitz	.50	3.00
vory	.50	3.00
Maman Cochet	.50	3.00
White Maman Cochet	.50	3.00

We have a general assortment of ll kinds of roses. Write for our atalogue.

LVIAS, all the best bedders	.40	2.50
MILAX, 2 in. pots	.30	2.00
GE, Holt's Mammoth	.40	2.50
RITOMA PFITZERII, new ever-blooming, $60.00 per 1000	1.00	7.00
NCA MAJOR VARIEGATA, 3 in. pots	.75	5.00
2 in. "	.30	2.00
OLETS, in best sorts, double and single, including, Hardy Russian, Hardy double English, California, Marie Louise, Lady Hume Campbell, $25.00 per 1000	.50	3.00

A Disastrous Fire.

On Monday morning, March 23, fire broke out in the greenhouse establishment of Henry Smith. The fireman's lantern is supposed to have exploded, setting fire to the extensive potting sheds, boarding-house over the shed, in which fourteen men were sleeping, the adjoining barn, sheds, water tanks, and pump house. The fireman, Daniel McQueevan, was burned to death. Just how it happened will never be known. After the alarm was given the men in the boarding-house were confused, and quickly cut off from escape. Without waiting to dress they jumped out of the second-story window. August Johnson, Oscar Dahl, Reinholt Larson and Clause Oldberg, when they jumped, were obliged to do so from windows on the greenhouse side, and landed on the glass roof, being badly cut by the glass. Oliver Bailey went back into the building to get his valuables, but almost lost his life, as it was with difficulty he was rescued. He was severely burned on hands and face.

The loss will exceed $40,000; insurance $500, but the burned portion will be immediately rebuilt. The boilers are not much injured, and steamfitters were busy all day Monday reconnecting the boilers to those houses not reached by the fire.

Milwaukee.

S. A. F. Matters.

President John Burton, Secretary Stewart, George C. Watson, Robert Tesson, Alex. Wallace, J. C. Vaughan, Emil Buettner and Phil Hauswirth, of the executive committee of the S. A. F., paid us a pleasant visit last week. Considerable business of importance was transacted and a valuable program was mapped out. A report of the proceedings will be sent out by Secretary Stewart through the trade press. Many points of interest were visited, including the Exposition Building and the bowling alleys. The bowlers of the S. A. F. will be strictly in it during the convention. On Tuesday evening a banquet was tendered the visitors by the local club and a good social time was had. The committee departed for home Wednesday evening, and all anticipate returning in August to meet one of the largest gatherings of the craft ever held.

Here and There.

We are having an unusually early Spring this year. The weather during March was the warmest experienced in thirty years. We have had practically no freezing weather during the entire month. Last Friday the thermometer registered 73 degrees. Crocuses are in bloom and other outdoor stock is making rapid growth.

Roses became soft; Bridesmaid are coming in somewhat discolored; carnations are plentiful, but a steady demand keeps them cleaned up.

F. Schmeling is confined to his bed on account of pneumonia, and C. C. Pollworth is also on the sick list.

Not long ago the C. C. Pollworth Company received an order for flower pots from Dowie, of Zion fame, who is establishing a horticultural department at Zion City.

F. Holton is suffering from a bad finger, the result of poisoning through a wound received in handling roses.

C. C. P.

HYACINTHS Just right for Easter

All colors, from 3½ in pots, just the thing to make up pots and pans for Easter trade; also saves on express. $6.00 to $8.00 per 100.

TULIPS 3 in a pot, $1.50 per doz.; $10.00 per 100 pots. From flats, with bulbs attached, $3 00 to $4 00.

SPIREAS Fine plants, from 6 inch pots, $3.00 per dozen.

Above can be shipped at any time to suit customers, but advise early shipment. All carefully packed in light boxes. Cash with order, please.

FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by
A. T. DE LA MARE PTG. AND PUB. CO. LTD.
2, 4, 6 and 8 Duane St. New York.
P. O. Box 1697. Telephone 3765 John.

REGISTERED CABLE ADDRESS:
Florex, New York.

YEARLY SUBSCRIPTIONS.

To United States, Canada and Mexico, $1.00. To foreign countries in postal union, $2.00. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter. The date on the address label indicates when subscription expires.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.25.

ADVERTISING RATES.

Per inch, $1.25. Special positions extra. Send for Rate Card, showing discounts on continuous advertising.

For rates on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The Florists' Exchange are headquarters for all standard books pertaining to the Florist, Nursery and Seed Interests. Send 2c. stamp for complete descriptive catalogue.

CORRESPONDENTS.

The following staff of writers are regular contributors to the columns of The Florists' Exchange.

Any item of news, subscriptions, or advertisements handed to our representatives will at once be forwarded to this office, and receive full attention.

WILKESBARRE, PA.—Fire broke out in the greenhouses of Daniel E. Gorman on March 23. Fortunately, it was discovered before much damage was done.

THIS WEEK'S SUPPLEMENT.

Picea (Abies) Excelsa, Norway Spruce.

The Norway spruce is one of our commonest evergreens, and saying this is its recommendation, as it shows it to be one that has been found useful everywhere. As with many European trees, large specimens of it are common on many old estates. In former years, the one who planted had to rely on Europe for his stock of trees. Nurseries here were but in their infancy, and native trees could not be obtained except in their wild state. Because of this the older places show many more fine specimens of foreign trees than of native ones, except where the latter are indigenous. At the present time conditions have changed. Native evergreen and deciduous trees are now more easily had than the others. There is still room for more advance in the same way in the line of evergreens. Too much time has been spent on Pacific coast evergreens and not enough on those of Colorado and of our Eastern States. But few of the Pacific coast ones thrive here, while those of Colorado are hardy and beautiful.

The Norway spruce is a highly satisfactory evergreen when in its younger years, such as is represented by the one we illustrate. This is a specimen growing on the estate of the late William Walter Phelps, Esq., at Teaneck, N. J., under the charge of Donald Matheson, who has had supervision of the grounds for the past thirty-three years. This tree, the Norway spruce, is 52 feet in height, with a spread of 36 feet.

The Norway spruce is not a rare tree, but specimens of the size of the one pictured are not so common in such good condition. It is more than usually broad and luxuriant looking.

When in poor soil the Norway spruce, though it may appear in a fairly satisfactory condition for some years, is not of lasting beauty. When in deep soil, and yet that which is well drained, it is often seen of beautiful proportions. About Philadelphia many of the larger trees of it are past their best. In the suburbs of Baltimore are some of the finest specimens we have ever seen.

As our readers will observe, the one photographed has been given all the room it wanted for development, and it has done justice to it. It should always be given ample room. An evergreen shows the ill effects of crowding much sooner than a deciduous tree does.

Owing to the confusion in nomenclature, the Norway spruce is as often found in catalogues under the name of abies as of picea, but though the latter name is the correct one, it has been so long listed under the former that to the end of time it may be looked for under the designation of Abies excelsa. JOSEPH MEEHAN.

Society of American Florists and Ornamental Horticulturists.

In a recent communication from this office the address of the Misses Wilson who made an exhibit of American grown bulbs at Asheville, N. C., last year, was given as Sorrento, Fla. This was a mistake, the address of the Misses Wilson being Montgomery Ala.

The following named State Vice-Presidents have accepted the office for 1903, in addition to those recorded heretofore: Western Pennsylvania, S. Alfred Baur, Erie; Western New York, Charles A. Keitsch, Buffalo; District of Columbia, George C. Schaffer, Washington.

WILLIAM J. STEWART,
Secretary.

Exposition Building, Milwaukee.

(See page 362.)

We present herewith an excellent illustration of the Exposition Building in Milwaukee where the S. A. F. will hold its annual convention and trade exhibit in August next. The picture gives a good idea of the size of the structure, in which is provided ample accommodation for the largest trade exhibit since the formation of the National Society. The meeting room adjoins the exhibition hall, and has a large seating capacity. The home florists expect to see every available foot of space rented, and every seat filled. P.

Graft.

The absorbing of money which you have not earned and which of right belongs to another.—Modern Definition.

We learn from our English exchanges that it is proposed to present a bill in Parliament for the purpose of putting a stop to corrupt practices in business in Great Britain. If made law, such a measure would, among other things, strike a blow at the custom common among horticultural houses of granting a commission to gardeners on all their purchases. The subject was recently made a matter of editorial consideration by The Gardeners' Chronicle of London. That journal, while deploring the prevalence of the practice, holds out little hope of its entire eradication; but advises that it be carried out openly and regularly, according to some recognized scale; and let not one firm endeavor to gain the advantage over another by breaking through the recognized custom. It also suggests a meeting of the principal nurserymen and seedsmen to consider the question in all its bearings, and to agree on some common action.

Viewing the matter from the standpoint of the recipients, the Chronicle says: "Even in bad cases their offense against honesty is not so great, and more valid excuses may be made for them than in the case of the tempters." The journal in question attributes a considerable portion of the blame for the existence of the evil to the fact that the wages paid to capable men are quite inadequate to the responsibility, ability and forethought that are required of a gardener, adding: "That the inadequately paid skilled craftsman should be willing to accept a secret commission, or 'agency,' is no doubt lamentable, but is comparatively a venial matter, and one which a better education and a higher rate of remuneration would do much to restrain."

On this side of the Atlantic the custom here referred to may not be so pronounced as it is in England, still it is present with us and, as the business increases here and competition grows keener, so is the evil likely to become more aggravated. It is always wise to nip in the bud an irregularity, or anything that has no very valid excuse for its existence, and it is none too early to begin to consider the best plan to combat and, if possible, abolish this iniquity.

To condone the custom by asserting that it is common in most all lines of business, and in vogue among our neighbors of the trade, will not mend matters. It is wrong from whatever viewpoint considered. If the gardener demands a secret commission, that is nothing more nor less than to extort blackmail from the merchant. On the other hand, if such a commission is voluntarily donated by the merchant, it is plain bribery, done with an ulterior motive—that of securing the monopoly of that particular gardener's, or rather his employer's, trade. In no sense can a commission of this nature be regarded as a "present" or a "gift," because of the "string" that attaches to it.

As we see it, there is no good reason why the altruism of the seedsman or nurseryman, or, for that matter, of a member of any other branch of the trade, should expand to the extent of partially bearing the burden of impecunious or greedy employers by making up a deficiency in the remuneration paid to the gardeners or other employees of such; neither should a custom be permitted to persist whereby avarice, veiled by simulated generosity, should tend to rob an employee of his self-respect, or transform him into an eleemosynary individual, dependent for some part of his emoluments upon the bounty of the man from whom he buys goods for his employer. A factor of this character in any business deserves to be driven out of it, and this can be accomplished by every merchant discouraging it on all occasions and at all times.

Our Spring Special Edition, 1903.

We believe no better gauge of the healthy condition of the florist's business at this time can be submitted than our Special Spring Edition, issued to-day. And this condition is all the more gratifying in view of the very hard Winter through which the trade has just passed, in which the scarcity of fuel and the temporary advance in express rates for cut flowers have proved such untoward factors.

To-day's edition also demonstrates forcibly the fact that the trade is becoming more imbued, and rightly so, with the thought that in order to secure a share of the business a-going, it is necessary to go after it, through the best available medium—advertising. This applies equally to the man whose reputation is made, and his trade long established, as it does to him who for the first time seeks afield a customer for his surplus stock.

To the many firms who have renewed their confidence in The Florists' Exchange as a business bringer we extend our thanks for their patronage; and we bespeak for them that meed of trade which their enterprise merits.

There are several features in this edition to which we desire to draw special attention. Foremost among these is the very valuable article, by R. W. King, of the King Construction Company, Toronto, Ont., and Lockport, N. Y., describing the heating system in operation at the plant of the Dale Estate at Brampton, Ont., with its modern and highest improved accessories. Mr. King's article is accompanied with explanatory diagrams, and by this means the reader will get a grasp of the workings, as well as the beneficial character of a heating installation that stands foremost in its class at the present day.

A full report of the fifth annual meeting and exhibition of The American Rose Society, with the papers presented and discussions thereon, are also included in this issue. Of particular value are the essays of E. G. Hill and Professor Corbett, the first dealing with the newest varieties of roses, the latter setting forth the results of comparative tests with flowering and blind wood rose cuttings for propagating purposes, consequent on experiments extending over a period of five years.

We would direct notice to Robert Craig's plea on behalf of The American Rose Society. The awakened interest in the rose already created by the Society, which may be said to be still in its infancy, is a good indication of what it will, if properly supported, accomplish as the years pass. The status of the rose, as a staple in commercial horticulture, can only be maintained and advanced through the energetic endeavor of the devotees of the flower, both professional and amateur. The Society whose aim is to promote the rose interests of the country is therefore deserving, and should receive the material aid of every one who grows and loves the queen of flowers. Particulars as to membership can be obtained on application to Secretary Leonard Barron, 136 Liberty street, New York.

The Rose Society, encouraged by the present year's success, has decided to hold its next meeting once more in Philadelphia. Subsequently, it will change its sphere of labor, so that its beneficent influence may be directly felt in other rose-growing centers.

Nurserymen will find some serviceable seasonable suggestions and advice in our nursery column, conducted by Joseph Meehan. We invite the attention of interested parties to what Mr. Meehan says relative to the conduct of this much appreciated department of The Florists' Exchange.

In conclusion, we hope that the expectations of our advertisers will be realized to the fullest; and that our readers may derive much benefit from a perusal of the reading matter provided, which we have great pleasure in presenting.

“Sun”—Ray of Hope for the Wanting Widow.

Ve are pleased to note (as, no doubt, our advertiser) the following edito- l comment in a recent issue of The n, New York, relative to a Want ad. nch appeared in our columns. rough the combined efforts of our eemed contemporary and those of rselves there is every likelihood of widow being able to secure a man er her own heart, who will prove a sirable helpmate in every particular:

German Gardeners, Attention!

rdinarily we should not look for even tially sentimental communications in valued contemporary, The Florists' change. But all is fish that comes to sociological net; and it is our duty, not our chief pleasure, to drag that net th an unsparing hand. So, among the enhouses, the nursery stock, the ning paint and putty, the first-class w two-inch black pipe, the second- nd flower pots and side-board iron eelbarrows, our prophetic f et are nded past the giant daisies, the baby mroses, the Bride and the Bridesmaid ses to this advertisement, at once nsible and sensitive, stuck bashfully t firmly in the "Help Wanted" column:

“GERMAN WIDOW, 37, possessing fine tablishment, 18,000 ft. glass, 18 acres land, having had trouble in getting ght man for running plant, sees only o ways ahead, either sell, or, as she is t willing to part with place, to adver- e for a German gardener who knows business thoroughly, especially carna- ns; healthy, honest, sober, and not raid of work, between 40 and 45, with view to matrimony. Address L. H., re Florists' Exchange.”

It is scant praise to call this a plain siness proposition. It is a handsome siness proposition. It has a clear, hon- t, attractive face. There is not a bit nonsense about this German widow. e has eighteen acres of fine land; ubtless an equally fine person. Now lone woman, however capable and en- getic, needs competent assistance in king care of 18 acres of fine land and ,000 feet of glass. She loves the place. e loves every flower on it, and espe- ally the carnations. And if she can find healthy, honest, sober, intelligent, in- strious German gardener of the age of scretion, thoroughly expert in his pro- ssion, and especially in carnations, why, timately, she may be willing to cease to a widow.

Notice that no boys need apply. Verg- g toward her prime and perfection, the erman widow looks for a gardener and ossible partner who is come to forty ear and is beginning to draw toward e age of discretion. This age may be aid to be forty-five in men, although any or most of them would be guiltless the discretion if they had twice the ge. At 45, or somewhere between it and , much of the fuzz and downiness of ender juvenility should be gone. The apers have been cut. The wild oats have iven way to more profitable crops. The il- usions of veal-time have dropped from e eyes. Then a man ought to be able appreciate a fine woman; and he is in uch better case than he was at 25 to ppreciate 18 acres of fine land and ,000 feet of glass.

It may be added that the experience f many countries and peoples shows at marriages contracted on a sound usiness basis rather than from romantic nd necessarily fragile and perishable npulses turn out well as a rule. The erman widow doesn't care for “a violet the youth of primy nature, forward ot permanent, sweet not lasting, the erfume and suppliance of a moment.” ee the “Shakespeare Phrase Book.” She ants a steady, middle-aged man who akes a specialty of carnations.

For the benefit of unmarried mediæval erman gardeners, who know their busi- ess and especially carnations, we here eprint the German widow's advertise- ent. It would be a shame for her to ave to sell her place.

---

hotographs for Catalogue Work.

Many catalogue makers lament, when oo late, having allowed the season for aking effective pictures to go by with- ut securing valuable original material or their forthcoming catalogue; again, here are, comparatively speaking, few hotographers who understand the equisites for making a successful pho- ograph on the lines required. Original alf-tone plates are not expensive; they give a catalogue tone and will repay heir cost.

Therefore, and in order to benefit hose who may wish to avail themselves of the service, the A. T. De La Mare Company, publishers of The Florists' Exchange, beg to announce they have made arrangements with a skilled photographer, a gentleman who has had many years of horticultural photographing experience under effective teachers, to fill engagements by taking pictures within a reasonable distance of New York City. For further particulars, address Catalogues, care of The Florists' Exchange.

Photographs.

The Florists' Exchange will pay $1, either in cash, a year's subscription in advance for our paper, or a credit for $1 worth of books, to be selected from our Book List, for each and every accepted photograph of any specimen plant, shrub or tree, foliage or flowering. Photographs can range from representations of the most ordinary bedding varieties up to the most stately palm, stove plant, shrub or tree, the desire of the publishers being to obtain as nearly a complete collection as can be secured. By “specimen,” we mean one plant standing alone, all background to be screened off; to obtain this effect some cloth of neutral tint, as a gray for instance, should be used. Also, we will pay as above for distinctive lawn views, hedges of privet, boxwood, etc., for single specimen blooms, or artistic arrangements of cut blooms from flowers or flowering shrubs and trees.

Please note this is no competition, the only condition for acceptance being that photographs must be clear in detail, and each picture forwarded be accompanied with a proper description.

Size of photographs must not be less than 4x5 inches, although $6\frac{1}{2}$x$8\frac{1}{2}$ inches would be preferred.

Address correspondence to Photograph Department.

MADISON, N. J.—Charles H. Totty, formerly at Florham Farms, has bought the greenhouses of James Hart, with a piece of property, and will embark in the florist business on April 1. Mr. Totty leaves his former position, which he has held for eight years, with the best of good wishes for success in his new venture, in which sentiment we heartily join. If intelligence, practical knowledge and perseverance count for anything in the attainment of success, Mr. Totty has all these qualifications, and a bright future lies before him.

The Heating Plant
of the
GREENHOUSE ESTABLISHMENT OF THE DALE ESTATE
AT BRAMPTON, ONTARIO.

By Robert W. King,
Mechanical Engineer of the King Construction Company.

The Design of the Plant.

The establishment of the Dale Estate is the first on record where an economizer system has been introduced into greenhouse heating, for which reason a description of the principles embodied should be interesting.

An economizer is an arrangement whereby part of the heat that would otherwise pass up the chimney is used to heat the return water from the heating pipes before it passes into the boiler proper. In some cases, sufficient heat, which would otherwise be entirely wasted, can be captured to raise the return water to the temperature of the water in the boiler and to make, besides, considerable steam.

After experimenting with other types of boilers, and in consultation with the late proprietor, Mr. H. Dale, a water-tube boiler was selected, mainly for two reasons; it replied quicker to the action of the fire, which is an element of economy, and the circulation of the water in passing through the tubes admitted of a control in its direction; the cold return water entering the tubing where the surrounding heat was leaving for the flue had the effect of reducing the temperature of the chimney gases, which, if properly followed up, is an additional element of economy.

The first steam boilers used by the Dale Estate were 10 horse power each, and the order was for two boilers only, separately installed, so that one could be used while its neighbor might be under repairs. The tubing was one-inch piping. This battery was eventually increased to six sections set as three separate boilers, and having three fires only in the battery. It was very efficiently arranged as regards the circulating system, and gave a final temperature entering the smoke stack of 90 to 95 degrees Centigrade, in a number of tests extending over several years, the highest ever shown being 95 degrees, all fires working at the time. On deciding to increase the business, a new battery was started with 20-horse-power sections placed together in twos over one fire, each fire then being 40 horse power. Though the matter of again doubling the size of the boiler units has been under consideration, it has so far not been adopted by this Estate.

The original plant was designed for the burning of hard coal, with fires that would maintain steam pressure all night without attendance, and that object was well and economically accomplished.

The next problem facing the writer was a change of fuel to soft-coal screenings, and the burning of the same practically without smoke. Years of experimental labor and study have been put on this problem, including the introduction of the economizers (G). These in the older battery were placed in an extension at the back, necessitating, of course, a larger cellar and entailing an extra loss of heat from radiation through the increased amount of brickwork employed.

It was the encouraging results arrived at (as indicated by the appended tabulated tests), showing that any further economy of fuel would be practically an impossibility, that largely weighed in deciding to leave the proportions in the new plant as they were rather than to risk a relapse in attempts, with the limited time at command, at any radical change of the same. The improvements decided upon in the new battery were, the raising of the boilers to the same working level as the houses; the placing of the economizers under the boilers proper; and the smoke tunnel below again, effecting an economy in space with no more radiating brickwork than would be necessary for the boiler itself.

The tunnel (T) is seven feet in height and five feet in width, and serves for a settling chamber for the fine dust and ash that usually appear as gray matter at the smokestack top, as it falls to the bottom of the tunnel, to be removed at intervals, with the ashes, by the carrier (X).

By placing the boilers above ground their life is materially increased, since dampness during Summer months, when the plant is idle, is the cause of a large portion of boiler deterioration. The boiler room can be better lighted, which is also of importance when machinery has to be used therein.

By having room for underground smoke flue, or dust accumulator, of any desired capacity, with return heaters also installed under the boilers proper, as shown, no more floor space is required than would be called for by the boilers alone, and a corresponding saving in area of building and losses from radiation is accomplished. The boilers, by being thus relieved of cumbersome smoke flues, and with economizer chambers on the same level, are made much more accessible for examination and repairs; the back plates of the boiler can be entirely removed. The return heaters (G) can be easily disconnected and withdrawn (on a track provided for that purpose) through a door in the back plate, for repairs, and the boiler connected up and operated without heater, if desired. The tops of the boiler are clear of smoke pipes; enabling the space above them to be used for coal bins, machinery, steam connections, etc. In the whole arrangement, consideration has been given to the matter of insurance against fire. It will be noticed that all the important pipes are brick supported, or run underground, so that in the event of the roof burning off, the main heating plant would not be otherwise seriously disabled.

A great deal has been said about the relative values of water-tube and ordinary fire-tube boilers in greenhouse work. I have referred above to the elasticity, or quick response, of water-tube boilers to the action of the fire. The water tubes in the boilers first used by the Dale Estate were only one inch in diameter. As the size of the tubes is increased, part of the elasticity of the boiler is lost, as the tubes hold then a greater amount of water in proportion to the surface exposed to the fire, and this is the important point to be kept in mind. Consequently, were a fire-tube boiler designed to have the same proportions in this respect as obtain in a water-tube boiler and to have as efficient an interior circulation, it would be equally elastic responding with equal rapidity to the action of the fire. Again, could the "direction" of the circulation be in some way as well controlled in the fire-tube as in the water-tube boiler, both types would be equally efficient in this respect also. This can practically be accomplished by the use of our economizer system. But we may add that unless care be taken in piping the radiating system to correspond, then the advantage of any boiler plant correctly designed in this respect may be entirely lost.

A striking illustration of the above is to be found at the Date Estate plant. The original batteries were laid on the gravity-return principle, with the bulk of the return ends of the heating coils a long distance from the battery, and as further extensions would be made it became impossible to even keep the heating coils hot to their ends; consequently the return water came back to the boilers cold, its temperature having been found, in some instances, to be as low as 60 degrees, its full heat having been expended in some way in the spaces heated, though not necessarily in the houses themselves.

It was while the plant was in this

ndition that the first of the tests rein published were taken, after ich, and a further extension of ıses being made, a pump was inlled to ensure a forced circulation. is had become necessary, not only keep the further ends of the houses ated, but also to ensure the safety the boilers, which were showing inations of damage from low water. ter the installation of the return mp it was immediately noted by the emen, and sȯ reported to the writer, t to keep the houses heated when pump was in action was a much rder problem, and required a much ger expenditure of labor and fuel n when the pump was not in action. e real reason for this was not at first lized, though the writer had specil that the pump should be automatlly controlled and all returns trapped keep the steam back in the houses; up to the time of writing this has been accomplished. The seriouss of this omission (as no tests were ken after installation of the pump quite recently) was not determined til this season, when tests were de on identically the same fires, ted in exactly the same manner, and erated by the same men, the water, wever, being pumped back (as the t shows) at almost boiling temperae. The results are so interesting, l so appropriate an illustration, that publish them side by side. I may l, too, by way of circumstantial dence, as to the difference in econo given by the cold in favor of the returns, that in addition to the esnated supply of coal for the season which the pump was installed there re burned a lot of 200 tons left over m the previous season, and in addin extra amounts had to be purchased get through the season.

Having made other tests along these lines in various places and conditions, the writer is positively informed and convinced of the economy in fuel to be obtained by a correct and proper installation of the economizer system. This applies whether the boilers used are large or small, fire-tube or water-tube, hand or automatically fired.

However, it must be understood that though a system may be installed so that the greatest amount of heat possible is absorbed from the fuel, still the distribution of the piping, particularly the return pipes, may be such that the heat is not utilized to the best advantage; or, in other words, is wasted. In fact, it may be radiated unnecessarily in uncontrolled return piping in a way even injurious to the proper grading and distribution of the heat in the houses. In our improved system we distribute the heat of the water return piping evenly and proportionately with the steam piping, installing practically a combined steam and hot-water system, whereby the extra heat saved by the return-heater system can be more perfectly and fully used in the proper heating of the houses.

It must also be remembered that there is a limit to the extent to which heat can be gathered from escaping gases, since enough heat has to be left to give draft to the chimney. At best a chimney, and especially a low one, is a wasteful way of obtaining draft, and where it may be possible to collect all the heat from the furnace gases there is no doubt but that the chimney will be superseded by mechanical draft.

The business of flower growing is extending so rapidly, and heating plants are being made larger to keep pace with the growth of the rest of the establishment, that their proper designing is becoming very much of an engineering matter, and one that is more in the province of the professional engineer than the professional gardener. An attempt has been made at the Dale Estate to advance along engineering lines, and the work so far done has shown possibilities for still greater improvements, that will be heard of in the near future.

The tests taken in 1901 were certified to as follows: One foreman of the Estate keeping account of the weight and temperature of the water and signing his name to the same; another foreman keeping account of weight of coal used and pressure of steam, also signing his name to the same; a superintendent in charge of the whole test, and the three principals agreeing at start and finish as to the condition of the fire and water levels being the same.

The tests taken in 1903 were certified to by one of the engineering foremen and an assistant. The first test in 1903 was taken as the fires were found and as they had been run previously. The second, which shows a small improvement, was taken after attempts had been made to better conditions.

A comparison of the tests of the two years, one using cold returns, and the other hot returns, shows a large increase in fuel burned as against what would be required were a cold return water system efficiently installed. It should, however, be noted that in order to obtain sufficient steam under less economical conditions, the boilers had to be run harder, and the test of January, 1903, was taken under this condition; but the test of February, 1903, was taken at so nearly the same rate of combustion as in 1901 as to give better comparative results, the main difference being only in the temperature of the feed water, which was 178 degrees in the one as against 52½ degrees in the other. Thus comparing the best test in 1903 against the worst in 1901, we have an increased rate of fuel used in 1903 of about 35 per cent.; or, taking the fires as they had been run, an increased rate over what could be accomplished with an improved system of 50 per cent., meaning an unnecessary loss in coal of one ton to every three burned, and requiring the installing of

The Performances of the Plant.

Boiler Tests at Brampton, with Automatic Stokers.	1901 Jan. 14	1901 Feb. 18	1903 Jan. 22	1903 Feb. 6
Heating Surface of Boiler, 900 sq. ft. plus heater 150.				
Grate Surface, 16 sq. ft. plus heater 150.				
Fuel used, Screenings damp, with percentage of ash estimated at 15 per cent				
Duration of Test	6 hrs.	6.3 hrs.	4 hrs.	3½ hrs.
Average Steam Pressure	8 lbs.	5.7 lbs.	6¾ lbs.	6¾ lbs.
Temperature of Feed Water	58 deg.	52.45 deg.	120 deg.	178 deg.
Total Coal used from Pile	1200 lbs.	1800 lbs.	1800 lbs.	1300 lbs.
Ashes on above Estimate	180 lbs.	270 lbs.	270 lbs.	195 lbs.
Coal Combustible	1020 lbs.	1530 lbs.	1530 lbs.	1105 lbs.
Coal used per hour	200 lbs.	284.3 lbs.	450 lbs.	343 lbs.
Coal used per sq. ft. of grate per hour	12.5 lbs.	18 lbs.	25 lbs.	21 lbs.
Total Water Evaporated	10178 lbs.	15280 lbs.	11711 lbs.	9200 lbs.
Water Evaporated per hour	1697 lbs.	2413 lbs.	2928 lbs.	2628 lbs.
Water Evaporated per lb. of coal used	8.48 lbs.	8.48 lbs.	6.5 lbs.	7.1 lbs.
Water Evaporated per lb. of coal combustible	9.98 lbs.	9.98 lbs.	7.66 lbs.	8.32 lbs.
Water Evaporated per lb. of combustible from and at 212 deg.	11.88 lbs.	11.7 lbs.	7.93 lbs.	8.67 lbs.

three boilers where two would do the work.

It is not claimed that the full results shown in these tests are obtained from the use of only the heat in the return water; it must be understood as well that the lowering of a large percentage of the boiler, or heat-absorbing surfaces, adds to their efficiency, causing a less amount of boiler surface to do the same work. Thus a double advantage is gained; the return heaters, besides heating the water to the steam heat, raising, in addition, considerable steam.

In addition, it must be understood that the fires under test, being a part only of a battery supplied by a single smokestack, the extra amount of fuel burned in order to supply the demand for steam would have an injurious effect on the draft where the smokestack was originally designed for a much less rate of combustion. This, with a somewhat deeper fire that would result, would give less air to the fires; and since the battery in 1901 was expertly adjusted and a proper balance of air secured by a series of gas analysis tests, this balance would be disturbed so the fires themselves would burn in a less efficient manner. Whatever theories may be advanced, the tests themselves are from actual conditions and are positively indisputable. The results can only show the importance to be attached to correct engineering practice both in the installation and management of a steam-heating plant.

Description of the Construction.

Fig. 1 is a part elevation, Fig. 2 is a part plan, like letters referring to like parts.

A is an automatic stoker fire; B B represents boiler sections of 20 horse power each, under natural draft; B 1 is a small high-pressure boiler; C C are smoke stack flues, the stack being double, each flue supplying a boiler battery on either side of the stack; D is ash pit, with water-tight bottom; D1 D1 are passageways for dumping ashes into the tunnel, T; E is small upright engine for driving the stoker operating shaft, E^1; F is smoke flue leading from boiler to tunnel, T; G is return heater; H is coal spout feeding the stoker, A, by gravity; J is main return pipe supplying water tank, W; K is a trussed iron roof gutter; L is return pipe from pump (P) to heater (G); R is a reducing-pressure valve; S is steam pipe from high-pressure boiler; S^1 is main steam pipe; S^2 is high-pressure connection to work pump; S^3 is low-pressure connection to main steam pipe (S^1); T is underground smoke tunnel and dust-collecting reservoir; V V are branches of the main return pipe (L) feeding the two batteries of boilers, the feed water first passing through the return heaters, G. X is a coal conveyor used to fill and spread the coal in the overhead coal bin (Z), which coal bin runs the whole length of the battery and supplies coal through the spouts (H) to the stoker fires. X^1 is the coal conveyor returning along the bottom of the tunnel (T) where it is used to remove ashes and dust from the tunnel in a way that will be explained under coal-conveying machinery. W is the water-return reservoir tank. It will be noticed that the return pipes from end of steam coils fall below the level of the water in tank and rise again, thus making a trap, or water seal, whereby all steam is kept back in the coils, and only water of condensation can enter the tank. It is also essential that the level of the water in the tank be automatically maintained at the same level by the use of a float-controlled pump in any usual manner.

Referring to the diagram of the coal-conveying machinery: The coal, being dumped into the hopper (A) is automatically fed to the conveyor (B) by the feed wheel (C); it is then carried up this conveyor trough by moving chain and floats (the latter being mounted on wheels to reduce friction) and deposited in either of five cross conveyor troughs, Nos. 1 and 2 only being seen in the drawing.

No. 1 is the conveyor passing over the boiler, partly shown in plans 1 and 2 at X; its use has been explained. No. 2 is one of four whose upper section deposits coal in store, while its lower section can be used to withdraw coal from store and deposit it in the lower section of the main conveyor (B), whence it is carried to the elevator (E) and there carried into the upper section of conveyor (B).

The position of the driving engine and belt and gear connections are clearly indicated on plan.

The operation is as follows: In taking coal from the wagons it can be deposited either in the cross conveyor leading to bin Z (Fig. 1) above the boilers, or in either of the four cross conveyors leading to storage buildings. The storage building is especially arranged and adapted to prevent heating and spontaneous combustion of the soft-coal screenings (of which there is accommodation for the storage of 3,000 tons). Without shoveling, or with a little work, an extra 500 tons may be added. There is also a simple arrangement by which coal may be withdrawn from any of about 40 positions in the shed and deposited in the cross conveyors to be elevated to the coal bin (Z) for use in the boilers, as previously explained. Or, in the event of the heating of the coal, it can be taken from any one part of the building, and, after traveling along the conveyors, cooled and deposited in any other part; though since the very effective system of ventilation of the mass in store, devised by the writer, has been adopted no heating of coal has occurred. Still every precaution has been taken to effectively deal with the question should a fire occur, as was the case previous to the installation of the ventilating system referred to.

National Florists' Board of Tra

In a circular letter, dated March 1903, Cornelius S. Loder, formerly s retary and treasurer of the Natio Florists' Broard of Trade, with offi at 271 Broadway, New York, announ a change in the management of this stitution as well as in its offic These changes have been rendered n essary owing to the pressure of ot important matters requiring Mr. der's personal time and attention. is now stated that arrangements h been made by which the requisite ti and attention will be given to the tails and management of the busin by Mr. John E. Walker, 56 Pine str New York City, who has been elec secretary and treasurer of the c pany. Mr. Walker is a well-known torney and a man of high standing the New York Bar. Records heretof kept at 271 Broadway have been tra ferrred to the new office at 56 F street, and the same experienced ployees will be in charge of the b and papers.

The new arrangement brings a fu er accesssion of legal strength into Board by the election of Messrs. liam A. Moore and Charles J. Dun both members of the New York Mr. Moore is the Assistant District torney of Westchester County.

Mr. Harris H. Hayden, who has cepted the presidency of the corp tion, is a business man of wide exp ence, having been the treasurer manager of several well-known c panies doing business in this city.

It is the intention of the Board, as constituted, to push the business v ously, and they hope to make the vice more valuable in the future t it has been in the past. Any sug tions in this direction will be hea received and most carefully consid by the new directors and officers, will be very glad to have the pleas of meeting members of the trade wh ever they are in New York City.

Flowering Shrubs in their Order of Blooming.

By Wm. A. Peterson, Chicago.

Before Twentieth Century Club of Oak Park, Ill.

When the last snow vanishes before the warm rays of the Spring sun, and our little ones are daily waiting to hear the first notes of the returning robin, nothing can be more a-la-saison than to turn our thoughts toward the garden. When the Autumn is prolonged, as it was last year, there is a favorable opportunity given for planting, which otherwise would needs be done in the Spring. Whatever improvements, or finishing touches, are to be made should now be planned for, so that a year's growth should not be lost.

A horticultural writer has said: "The yard is the outdoor parlor of the home." I wonder how many of us would be satisfied with the impression given of our housekeeping as judged from this standpoint.

A bright, sunny place, where the ground thaws out early, should be selected for the location of the advance guard for our grand promenade. The Japan quince and the golden bell are in full bloom before a single leaf-bud unfolds; they make a striking Spanish combination of bright scarlet and gold, but are more pleasing if not planted side by side. Where the back yard is large enough the early flowering "pussy willows" might be introduced as one of the harbingers of Spring.

The æsthetic and beauty-loving Japanese make annual pilgrimages to their sacred groves when the flowering cherry, plum and crab are decked in their kaleidoscopic wealth of ever-varying shades. The denizens of our dusty cities, who have never seen a fruit orchard in full bloom, have missed a great sight. The flowering almond represents this class for ornamental planting, and like many of its comrades from Asia, is most lavish with its blooms.

In preparing this paper I have had before me last year's "Blooming Diary" made at the nursery, so that whichever of the more prominent shrubs I may mention will be taken up in their sequence of florescence for this region. May 13 the large trusses of the lilacs began breaking forth with their unrivaled perfume, and though there are many other species and varieties, when it comes to the question of fragrance, they all have to step aside for the old-fashioned, time-tried, common lilac. It was cultivated quite extensively by the Persians, by whom it was called lilag, and our modern name is but a slight modification of the old one.

The next to bloom are the bush honeysuckles, a numerous family. The tartarian section, being of erect habit, are largely used as hedge plants, while the Japanese spreading forms are among the best material for mass planting. They all vary in the color of the blossom, and are even more attractive in August, when appear the bright red and orange berries, which often hang on until late Autumn.

As in the animal kingdom, we find a kind Providence furnishing many different means of protection, just so has Dame Nature provided some of her offspring with adequate weapons of self-defense. It would seem for this reason the prickly ash, the flowering thorns, the barberries and the buckthorn, all of this period, by being well armed are enabled to ward off the enemy, intent on despoiling them of their attractive flowers or fruit. The wild rose, which also blooms at this time, is thus protected by thorns, yet its sweet and simple beauty as it grows so brightly in roadside, nook or meadow, has ever been a favorite theme with the poets.

The real "high tide of the year" is undoubtedly just before Decoration Day, when all the earlier shrubs are still holding their own, and that prodigal of beauty, the Van Houtte spiræa, breaks into bloom like great drifts of snow left behind in the hurried march of the Snow King. From this time on, for the balance of the Summer, we have one or another of the spiræa family in flower with us, but the peer of them all is the one named after Louis Van Houtte of Ghent. He who had every possible honor bestowed on him in his lifetime for his world-famed horticultural attainments, will through this one plant have his name kept in pleasant remembrance by future generations long after his other honors are forgotten. My father while in his employ, was highly complimented in being sent to America in 1851 to execute some of M. Van Houtte's landscape plans.

The snowball, as well as the spiræa, is also a good bloomer for Decoration Day, and like all of the viburnums, grows well in the shade.

One week later, or about the 6th of June, the peonies usually begin to unfold, but instead of lacking words to describe them, I fear my enthusiasm, should I begin to tell about my favorites, would weary you. Suffice it to say that this family comprises many hundred single and double varieties, ranging from purest white to deepest crimson, in every possible combination of shade, form, and size, while many are delightfully fragrant.

By the middle of June the double roses enter the lists, and from then until frost continue more or less in bloom, providing they had the proper Winter protection and are sprayed regularly with insecticides.

After July 4 we can no longer be particular, as from then on the flowering shrubs are not as numerous. The giant tree lilac of Japan blooms during July with large terminal sprays of white, as does also the great family of privets. Then the common and unappreciated native elderberry completely covers itself with a great number of little white umbrellas, which later, in berry, are a feast for the song birds. The sumach, potentilla, Indian currant, and snowberry are flowering at this time, and are laying the foundation for the showy fruits which follow later in the Fall. Even now the first of the early flowering shrubs begin to color up their fruit, especially the honeysuckles, wayfaring tree, thorn, barberry, dogwood, bird cherry, and buckthorn.

For a tropical effect the hardy yucca is very largely used, and the terminal spikes of the ash-leaved spiræa are highly prized for July blooming.

The plant known to the botanists as Aralia spinosa is truly beautiful when surmounted with a great mass of white; its common name of devil's walkingstick is most appropriate, as its bark is one mass of spines.

Although not a shrub, the native clematis is at this season one of the most floriferous plants to be seen, and its poetic name of "Virgin's bower" suggests its dainty purity. In this connection I must say, however, that the Japanese clematis, coming a month later, both supplements the period of flowering of our native variety, and also surpasses it in profusion and in delicate fragrance. An old established plant, when completely enveloped in a mantle of starry blooms, it may be likened to the "milky way."

The most generally used and best known shrub for late Summer effect, in the East, is the althea, also known as the rose of Sharon, introduced into Europe three hundred years ago, supposedly from Syria. Unfortunately, in our climate the new wood often freezes back.

There remains but one more shrub of marked blooming habit to describe; and this is so strikingly bold in aspect and so common in every dooryard that the fact of its being so much in evidence makes its presence at times a little tiresome. I refer to the hardy hydrangea, a native of Japan, which was not introduced into commerce until 1874. In the botanical gardens at Washington are still to be found growing some plants of the original importation to this country. It is, however, evidence of its real worth that in such a surprisingly short time this shrub has forced itself forward into a place in the front rank.

There is a beauty in shrubbery which should not be overlooked, many species being even more attractive in form, leaf, or fruit than in blossom. Among shrubs with foliage of a solid color other than green, the best in each class are the purple barberry, silver-leaved oleaster, and the golden elder. For a mixed foliage of silver and green the variegated-leaved dogwood is the most durable.

In planning the landscape treatment of a piece of property we also endeavor to use material representing the various shades of light and dark green, and by the proper planting of trees obtain certain shadow effects on the lawn, both to give diversity and length to the perspective. Some vista should embrace a group of trees and shrubs arranged for autumnal foliage effect, and thus enhance whatever charms the place may have.

It seems odd that, when certain kinds of leaves invariably assume a particular hue, others will take upon themselves as great a variety of glowing tints as the rainbow.

While the leaves are falling we notice, often for the first time, how beautiful the fruit of the high bush cranberry is. The winterberry, a hardy holly, used so much at Christmas, is now loaded with bright berries, and our native black chokeberry is also a good spreading shrub for Fall fruit ef-

PEONY BLOCK

LARGE FLOWERED SYRINGA
GREEN BERBERRY

IN PETERSON'S NURSERIES, CHICAGO, ILL.

fect. In this connection we must not forget the wahoo, the nannyberry and the rich red or black heps on the single rose; and what can be more beautiful than the festooned sprays of the barberries?

Last Fall while showing a lady about the nursery, what struck her fancy the most was the speckled alder, the bark of which she likened to the breast of a brown thrush.

When a dash of color is wanted to enliven the Winter landscape, and the space does not admit of the use of trees, we have at our disposal the red-barked Siberian dogwood and its golden-stemmed American relative, as well as several dwarf low-growing willows of blue and purple bark.

No doubt every feature that enters into the so-called character or desirability of shrubs seems to have been covered, but they also have dispositions as divergent as the human race. To me the "beauty unadorned" of the bare outline of a tree or shrub stands for much.

The arrowwood, to use the Indian name, is as true and trustworthy as the shaft into which it is easily shapened.

In these cursory notes we have now made a complete cycle of the year, but it is a subject composed of so many individuals it has been difficult not to slight some of real merit, and still avoid reeling off a mere catalogue of dry, uninteresting facts.

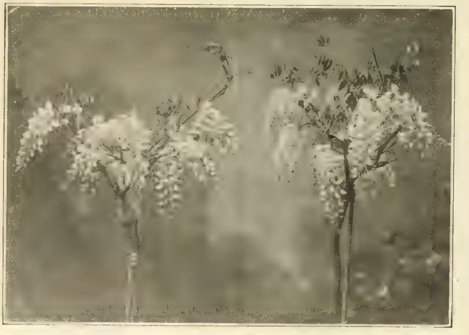
We associate gardens and orchards with the perfect conditions of mankind. Amos Bronson Alcott said: "Gardeners ourselves by birthright; the sacredness of earth and heaven still clinging to the tiller of the ground. His is an occupation friendly to every virtue, the freest of any from covetousness and debasing cares. It is full of honest profits, manly labors, and brings and administers all necessaries; gives the largest leisure for study and recreation, while it answers most tenderly the hospitalities of friendship, and the claims of home.

"The delight of children, the pastime of women, the privilege of the poor man, as it is the ornament of the gentleman, the praise of the scholar, the security of the citizen, it places man in his truest relations to the world in which he lives. And he who is insensible to these pleasures must lack some chord in the harp of humanity, worshiping, if he worship, at some strange shrine.

"Who loves a garden
  Still his Eden keeps;
Perennial pleasures plants,
  And wholesome harvests reaps."

Wistaria Sinensis.

The two plants shown in the accompanying illustration were photographed on February 1, 1903, at the establishment of Endtz, Van Nes & Co., Boskoop, Holland. The plants are almost seven years old, grown to standard shape, and are such as that firm supplies to the trade for forcing purposes. The picture speaks for itself as to the desirability of the wistaria for such a purpose.



WISTARIA SINENSIS, FOR FORCING PURPOSES.

AMONG THE GROWERS OF EASTER STOCK.

There is a general complaint again about the lilies for Easter, and the Japan longiflorums are a source of anxiety to those who are growing them in large numbers. It seems rather hard on the grower when, after buying bulbs, and growing them several months, giving them good care and treatment, that he has to throw out from twenty-five to fifty per cent. of the stock because it is no good. We hear complaints from many sources about the large percentage of bulbs planted that turn out to be useless; in fact, we have heard some growers remark that they would be perfectly satisfied if the loss of bulbs did not run over twenty-five per cent. It is very evident that the Japanese bulbs that reach here every season are in a terribly mixed condition, and among them are types that are almost worthless for forcing purposes, however good they may happen to be in Japan.

Anton Schultheis, of College Point, L. I., has the finest lot of Easter plants he has ever had. The Crimson Rambler roses are in magnificent shape; there are two houses, one 150 feet long, and one 100 feet long, filled with these plants, and we never saw this rose so well budded before. The smaller bush-shaped plants have from 20 to 24 flowering sprays each. A noticeable feature about these roses is the absence of mildew, or greenfly. They are perfectly clean and well grown. Some of them run as high as 7 or 8 feet, and are trained to pillar shape; others are trained in basket forms, while some are trained in balloon shape; but whatever the form, the whole batch is very well budded, and makes a magnificent lot of Easter flowering roses.

There is only a limited number of moss roses grown; these are not seen in the quantities of some years ago.

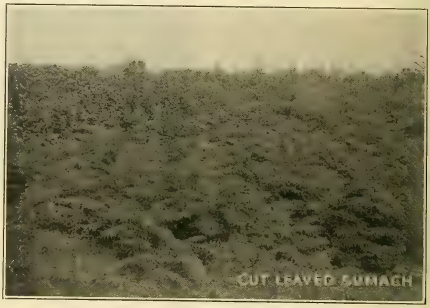
Of longiflorum lilies there are some 5,000 pots, and all in the best possible condition. The large-sized bulbs are being grown, and while there has been a certain percentage thrown away, the amount of loss has not been so large as reported at most other places. The plants are getting up to a nice average height, and will throw from 6 to 10 blooms per plant, which is certainly a good average.

There is also a nice batch of bougainvillea; these are trained in different forms, and will be in flower for Easter time.

There is quite a large stock of hydrangeas, all showing their flower heads, many of them beginning to show color already. These are what may be termed medium-sized plants, low growing, well furnished with foliage clear to the pot, and timed to be just right when wanted. There is also a nice lot of lilac coming in; the two varieties grown are Marie Legraye and Charles X.; also a goodly number of spiræas.

As is well known, this establishment is noted for ericas, and there are several varieties in flower for Easter, the stock all being exceptionally good.

The number of azaleas grown this year is very large; altogether there are six houses full, and it has been more a question of holding back than forcing, in order to have the plants just right for Easter. These have been held back in good shape, however, and will be at their best when the time comes to send them to the city. There is also an immense stock of bulbous plants grown, notably tulips, hyacinths, daffodils, and narcissus.



IN PETERSON'S NURSERIES, CHICAGO, ILL.

Charles Zeller & Son, Flatbush, potted 2,000 lily bulbs, and out of that number there are not more than 900 that will produce flowers for Easter; the remainder were discarded as worthless some time ago. It is a noticeable fact that those plants that are showing buds and are apparently in a good condition are all of the narrow-leaved type. The size of the bulbs grown is what is known as the 9 to 10, and from present appearances there will be an average of about six flowers to the plant. But this number even will not compensate for the throwing out of more than fifty per cent. of the bulbs planted.

Louis Schmutz's greenhouses are filled to overflowing with stock of various kinds. Lilies have shown about fifty per cent. of poor bulbs, and are looked upon with disgust by the grower. Camellias and azaleas are coming along nicely for Easter, as also are cinerarias, Primula obconica and spiræas. Mr. Schmutz has also a heavy stock of home-grown latanias and other palms, also a good supply of Pteris tremula. Boston ferns are being grown extensively; and we also noted a small batch of Nephrolepis, Anna Foster.

R. Dryer, of Woodside, L. I., has an exceptionally well-grown lot of stock for Easter. Lilies that will be in flower at that time number about 7,000 pots, and while this may seem a large number, we may state that these are all that are left out of 16,000 bulbs; the others have had to be thrown away. The 7,000 plants are of nice average height, however, and they run from six to eight flowers per plant. The stock planted was mostly 9 to 10 size bulbs. There is also a very fine house of hydrangeas; some 1,100 plants—all nice, bushy stock, carrying from six to ten or twelve heads of bloom to the plant. Hybrid perpetual roses are also grown in quantity; the varieties are mostly Magna Charta, Gabriel Luizet and Ulrich Brunner. These are very well budded and are timed to be just right for Easter. Lilacs are grown quite extensively, but the white variety is proved somewhat slow in throwing cut flowers. The plants were last Fall's imported stock, and they were evidently dug before the wood was sufficiently ripe. The variety Charles X. is doing very much better, and there will be a lot of nice plants of this lilac in flower for Easter.

A well-grown lot of Crimson Rambler roses, mostly in bush form, was also seen. There is not much attempt made at this establishment in training these roses. Spiræas have proved very poor for the last year or two, and no effort has been made to have a stock of these in flower. A house or two of azaleas look very promising.

Mr. Dryer has several houses of very fine palms on hand, a stock of home-grown Kentia Belmoreana is particularly strong and of a rich green color. He has also a very fine stock of Areca lutescens and branching rubbers. The demand for the latter does not seem to have been as heavy this season as in previous years. There is also a very large stock of small ferns suitable for jardinieres grown at this establishment.

John Scott is growing lilies at his Flatbush (L. I.) establishment, and has not been troubled much with disease nor with having many mixed types among the bulbs. There are about 5,000 lilies, and they will be in nicely for Easter. There are also about 800 nice plants of Crimson Rambler rose of medium size, in bush form, that are budding up very freely, and are in good condition otherwise.

The stock of Boston ferns is quite large, and there will be about 20,000 plants of this fern grown for the Fall season.

At the Keap Street establishment, palms and decorative plants are the chief features, though there are 3,000 azaleas that will be in bloom for Easter. There is in the decorative stock a nice lot of Pandanus Veitchii and a large stock of Dracæna Lindenii.

Seedling ferns are being grown in large quantities; and one of the specialties this Spring will be cannas. The latter have already been set up to start growth. The collection includes about 25 of the best varieties, and the total number set up is 100,000 pieces.

Mr. Scott has placed large orders with F. R. Pierson for Nephrolepis Piersoni, and intends to grow this fern extensively. Nephrolepis Scottii, of which previous mention has been made in these columns, is still looking very promising as a decorative fern. It has distinct features of its own that will make it welcome to the grower, though whether it will be introduced before 1905, or not, we are unable to say. It is a very compact growing fern, however, though not so compact as N. cordata. Compared with N. bostoniensis the fronds are not so heavy nor so wide; nor do they have the rigidness or stiffness seen in the Boston fern; but they are, on the contrary, gracefully pendulous and thrown well up from the center. Taken altogether, the fern is decorative, makes a fine plant while in a small pot, and if sent out will assuredly find many admirers.

American Carnation Society.

Varieties Registered.

By J. E. Krayer. Villa Nova, Pa.

YORKTOWN, a sport from Mrs. T. . Lawson, color blush white, shaded ght pink toward center. Grown ongside of Mrs. Lawson, with same eatment, it bursts only about 2 per nt. of the calyces; is as free a oomer; has same habit and stem. ith flower three and one-half inches diameter. Has kept its color for two ars.

ALBERT M. HERR, Secretary.

Carnation The Queen.

Our illustration represents one of the uses of the Little South Floral Co., South Natick, Mass., showing the mpany's new white carnation, The ueen, on the two benches at the left; so a vase of flowers of the same car- tion. This fine variety is the result a seedling (William Scott × Wil- m Nicholson) × Daybreak, and has oved itself a grand commercial sort. freedom of bloom is well shown in e illustration. F. J. N.

Observations and Conclusions.

On March 11 the writer had the pleas- e of a few hours among the carna- ns at Syracuse, N. Y., and while un- le to see Mr. Marquisee, owing to the fortunate illness of that gentleman, very pleasant visit was enjoyed nong the new aspirants to popular vor in company with Mr. Marquisee's icient foreman, Mr. Grassyl.

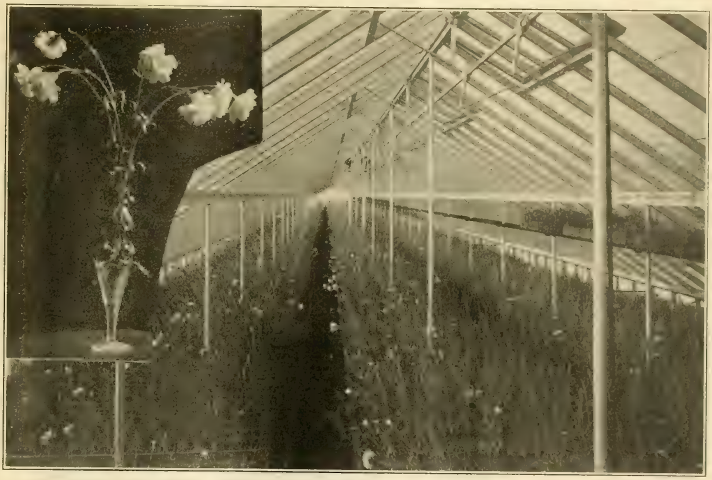
The point which impressed me first all with these new ones—Flamingo, batross and Sunbird—was freedom om surplus grass, and this is a fac- in their favor, for I believe a requi- e to be a clean, vigorous growth ich runs to flowers instead of grass. of Mr. Marquisee's seedlings seem possess a vigorous constitution, and th these three in general, but Fla- ngo in particular, there is hardly a n of anything but flowering wood. the three, Sunbird was the most at- ctive, due to the fact that Flamingo d Albatross are growing cuttings in- ad of bloom. I saw on them no sign disease, and the abundance of flow- on the foliage is an almost sure n of health and strength. These nations are fancies, and must be inted on as such, and as fancies they l take high rank; but that "free- oming, ordinary scarlet" is yet to be nd.

With proper handling this stock uld be in excellent condition for semination next Spring, and bids r to be a source of pleasure as well profit to the grower of high-grade nations. But a great deal depends keeping it in its present healthy dition.

To properly handle and disseminate novelty is an art. The failure of ny new ones to live up to the stand- set for them I believe to be a tes- onial to the truth of this. Several ones are living examples, or rather f-living examples, of the fact that ew variety can have its career ma- ally shortened by only a very little r treatment and mismanagement. ny distributors try to "get rich ck," and ruin not only the stock ich might otherwise have been a asure to us all, but by sending out erior cuttings they injure their own utation.

ne of our newest carnation firms, which has been handling one of the brightest stars on the horizon, deserves great credit for having seemingly mastered the art of handling stock in so short a time. But, on the contrary, several of our older firms have yet to learn that the stock a buyer will put up with at $15.00 per 1,000 will not be acceptable at novelty rates. With the competition for trade and the cheapening of stock, we see in many cases a falling off in the quality sent out. Just as in the case of rose stock. Instead of guaranteed goods at a fair price, we see the country flooded with stock at cut-throat prices, and goods to match. With a novelty, for on what comes as a novelty depends your future stock, one cannot be too careful, and the buyer is, I believe, perfectly justified in not accepting any goods which are below the standard. To accept a lot of poor cuttings and then to propagate from them does not give the variety a fair show, and it will not pay you financially to propagate from poor stock.

The finest carnations which I saw during my stay in Syracuse are the property of Mrs. Grassyl. Her husband has, without doubt, an equal, if not a superior, for this house of Mrs. Lawson is as fine as one would wish to see.



BENCHES AND VASE OF CARNATION THE QUEEN

Growers and Introducers, The Little South Floral Co., South Natick, Mass.

I understand that Mrs. Grassyl does all the work and also derives all the income. She certainly deserves the traditional "well done," for her Mrs. Lawson are winners for Syracuse.

I saw the carnation Empire State, but I regret the circumstance, for it is a sad sight to see a wreck of a variety giving its last gasp for life. Not a redeeming feature that I could observe; and yet the owner cannot be blamed, because he very honorably withdrew this one from the race.

With the longer days and the bright sun more and more feeding will be necessary. for with the increase in sunlight there is more rapid assimulation and a more rapid growth. A dressing of wood ashes will do a great deal to stiffen the growth and to give size and substance to the bloom. A little soot will add to the color, and liberal doses of liquid manure will aid matters materially.

Be careful of edges and corners, for with wind and sun they will dry out badly, and this is not conducive to good health. Full air can be given in the bright weather if the thermometer ranges about 65 degrees. Very little steam will be needed, and I prefer to do without it if possible. Green fly and red spider will flourish in this weather if not kept under control, and these should be carefully watched. A light mulch of well-rotted manure along the south edges of the benches will help, and with plenty of water and food the side shoots should come like the others with plenty of stem.

To keep back bloom is the question now, and the plants will in some cases need shade. This is true, particularly of the pink varieties. We find cheesecloth very efficient. I do not like to use lime in any shape on the glass, but prefer something such as cloth, which can be easily removed. With plenty of sun, the early Spring and good healthy stock there should be an abundance of flowers for Easter; but remember that a worn-out, faded bloom will perhaps be accepted, but on such there are few reputations made.

W. R. PIERSON.

Question Box

FERN FOR NAME.—Florida—The name of the fern is Nephrolepis rufescens tripinnatifida.

Plants for a Small Place.

(77) What are the best five varieties of geraniums, best six carnations, best four cannas, and best five chrysanthemums to grow in a small place? B. B.

—While we could not positively tell what are the four or five best varieties of the different plants mentioned, we can name some good varieties, and append the following:

Geraniums—Beaute Poitevine, salmon pink; Jean Viaud, pure pink; Frances Perkins, pink; John Doyle, scarlet; and S. A. Nutt, crimson.

Cannas — Tarrytown, crimson; Mrs. Kate Gray, orange scarlet; Mme. Crozy dwarf, gilt-edged; and Comte de Bouchard, yellow variegated.

Chrysanthemums—Yellow Eaton, yellow; Timothy Eaton, white; Mrs. Henry Robinson, white; Viviand-Morel, pink; and Kate Broomhead, orange.

Carnations — Lorna, white; Mrs. Thomas W. Lawson, cerise pink; G. H. Crane, scarlet; Governor Roosevelt, crimson; Mrs. G. M. Bradt, variegated; and Genevieve Lord, light pink. If novelties in carnations were to be purchased we would name: For crimson, President Roosevelt; scarlet, Flamingo; white, Governor Lowndes; light pink, Alpine Glow; dark pink, Mrs. Theodore Roosevelt and variegated, Mrs. M. A. Patten.

Chrysanthemum Frutescens in Violet House.

(81) Will Chrysanthemum frutescens do well in a violet house with the same heat as is given violets? Should the plants be in pots, or can they be planted in the beds among the violet plants? Will the shading on the house in the early Fall hurt them? Do they want rich soil, like a violet, and should young stock be allowed to bloom from the first buds if wanted for Fall and Winter flowering? A. B. C.

—Chrysanthemum frutescens should have a night temperature of 50 degrees, or a little higher rather than lower; therefore, the plants would not do much flowering while in a violet house. They can be grown equally as well in pots, or planted on the bench, though they flower better in the pots. Shade is not good for them at any time. Keep the buds pinched out and the plants growing until October; then let them flower at will.

Sand.

(82)—W. A.—The sample of sand received at this office had too much fine matter in it to be good for propagating purposes, and while some quick-rooting plants could be rooted in it with fair success we do not believe that the sand is suitable for a propagating bed where all kinds of greenhouse plants are to be rooted.

The School of Agriculture formerly at Briarcliff, N. Y., and more recently at Poughkeepsie, N. Y., of which George T. Powell was the director, is to be abandoned, and the property sold at public auction. Mr. Abram S. Hewitt's death and the illness of Mr. Andrew Carnegie are mentioned by Mr. Powell as reasons for the failure of the project after $50,000 has been spent upon it within a year. Last year four hundred acres of land were bought south of Poughkeepsie, upon which it was proposed to erect buildings to cost $200,000.

Fifth Annual Meeting and Exhibition

OF THE

AMERICAN ROSE SOCIETY

HELD AT

Philadelphia, Pa., March 24, 25 and 26, 1903

The fifth annual meeting of the American Rose Society was held in Horticultural Hall, Philadelphia, Pa., Wednesday afternoon, March 25, President F. R. Newbold in the chair.

The president made no introductory speech, but immediately called on the secretary to read his report. It was as follows:

Secretary's Report.

Notwithstanding a reduced revenue from annual subscriptions, our membership stands firm. There are 161 members on the rolls, of whom thirty-seven are life members. During the past year there has been the loss of one member by death, and four by resignation, and thirty-three other names have been dropped from the rolls in accordance with Section 4, Article 4, of the by-laws.

There is a large proportion of the membership in arrears with their subscriptions for the current year, and it is greatly to be hoped that members will meet their obligations without any further delay.

The number of the Bulletin which was issued this time last year, and which treated on "Diseases of the Rose," has been placed in the hands of every member of the Society, and has been given free distribution in other quarters wherever the opportunity seemed fit. It has been received with much appreciation, and is evidently valued by those interested in rose growing.

Your secretary again takes the opportunity to impress upon the members of the Society his belief that the publication of the Bulletin should be maintained under any circumstances. The papers which were presented at the rose convention in New York last year, in conjunction with those offered today, would afford material for a very interesting number. The Society might consider the advisability of making the publication of the Bulletin a regular feature.

The medals of the Society were offered at the Fall show of the Chicago Horticultural Society, at the Spring show of the American Institute at New York, and at the present exhibition of the Pennsylvania Horticultural Society. The silver medal was awarded to Franz Deegen rose in Chicago. There was no entry in New York, nor at the present exhibition.

The question of registration of varieties is brought to notice through the appearance of the variety introduced as "Canadian Queen." There has been some correspondence with this office over other introductions. Some of the foreign rose growers and rose societies in Europe and Australia write to this office for information respecting the introduction of new varieties, yet in consequence of the resolution adopted in 1901, by which all registrations are referred to the Society of American Florists, the officers of this Society are unable to satisfy inquiries, and it is suggested that it may be desirable to reconsider the motion referred to and have the American Rose Society look after the interests of new roses.

Following the secretary's report, Treasurer John N. May gave an account of the financial standing of the society, which showed that the receipts for the year had been $1,464.12; the disbursements, $494.00; and there was at present a balance on hand of $970.12.

A motion was made by F. L. Moore to amend the Constitution and By-laws so that in place of having an executive committee of six, the number be increased to twelve. After a discussion of this motion by H. Siebrecht, F. L. Moore, E. G. Asmus and John N. May, an amendment to the original motion was adopted making the executive committee seven instead of six.

The election of officers for the coming year resulted as follows: President, F. R. Newbold; vice-president, Emil Buettner; treasurer, John N. May; secretary, Leonard Barron—all re-elected. Three members of the executive committee to serve three years were also elected; these were Messrs. H. A. Siebrecht, Peter Crowe and Robert Simpson.

The meeting place for next year was then discussed, and as an informal invitation had been tendered by the Pennsylvania Horticultural Society to again hold the annual meeting in Philadelphia, it was carried by unanimous vote that that city be selected. The Pennsylvania Horticultural Society will, it is understood, present a formal invitation to the American Rose Society after the former has held its meeting the coming April.

President Newbold made a suggestion that the schedule be gotten out earlier in the season, thinking that this would conduce to more entries being made. On motion of Edwin Lonsdale, the executive committee was authorized to have the schedule revised and put in the printer's hands as soon as possible.

At this point the business meeting of the society was adjourned, and the doors were thrown open to the public to hear the different essays and papers which had been prepared.

At the conclusion of the reading of Professor Corbett's paper, Mr. Siebrecht asked if the quality of the roses produced by the plants under experiment had been taken into consideration, and the professor replied that only first quality blooms had been counted. The professor also stated that next year he was to experiment with fertilizers for the purpose of finding out whether the texture or substance of the flowers cannot be built up stronger by certain lines of feeding.

A vote of thanks was passed to Professor Corbett for his excellent paper.

Robert Craig then read his paper on "The American Rose Society and Its Work," which was followed by the reading, by John N. May, of the paper presented by E. G. Hill, of Richmond, Ind.

The Rose Exhibition.

The Spring exhibition of the Pennsylvania Horticultural Society and the American Rose Society was held in Horticultural Hall, Philadelphia, on Tuesday, Wednesday and Thursday of this week.

The competing exhibits in the classes of roses (prizes for which were offered by the American Rose Society), were fairly numerous, especially those for private gardeners only.

In the way of new roses, Breitmeyer & Sons, Detroit, Mich., showed a bunch of a pink seedling. The flower is not quite so deep in color as that of the Bridesmaid, though somewhat similar to that variety. It is unnamed as yet, and is the result of a cross between Mme. Caroline Testout and Bridesmaid. The American Rose Society's silver medal was awarded, the judges scoring this variety 90 points.

The American Beauty shown by John Burton and Adolph Fahrenwald were superb, as also were the vases of Queen of Edgely blooms grown by Myers & Samtman.

Peter Crowe's roses came in good shape from Utica, N. Y. In Benjamin Dorrance's prize collection the varieties were Bride, Mme. Caroline Testout, Meteor, Golden Gate, Liberty, Mme. Hoste, Mme. Cusin, Ivory, Mrs. Pierpont Morgan, Sara Nesbit, Sunrise and Bridesmaid.

The following is the official list of awards of the American Rose Society.

The judges were Robert Simpson, Clifton, N. J.; Edwin Lonsdale, Philadelphia, and Robert Halliday, Baltimore, Md.

Teas and Hybrid Teas—25 Cut Blooms.

Queen of Edgely—First, Myers and Samtman, Wyndmoor, Chestnut Hill, Pa.; second, The Floral Exchange, Philadelphia.

Bride—First, Peter Crowe, Utica, N. Y.; second, James Conroy, Plainfield, N. J.

Bridesmaid—First, Peter Crowe; second, John N. May, Summit, N. J.

Mrs. Pierpont Morgan Second, John N. May.

Mme. Hoste—Second, John N. May.

Mme. Caroline Testout—Second, John N. May.

Golden Gate First, Peter Crowe; second, John Burton, Wyndmoor, Chestnut Hill, Pa.

Papa Gontier—Second, John N. May.

Bon Silene -Second, John N. May.

Mrs. Oliver Ames—First, John N. May.

Ivory—First, John Burton.

Liberty—Second, John N. May.

Sunrise—First, John Welsh Young, Upsal, Germantown, Pa.

Any other named disseminated variety—First, The Floral Exchange.

Twelve Cut Blooms.

Bride First, James Conroy; second, John E. Andre, Doylestown, Pa.

Bridesmaid—First, John E. Andre.

Souvenir de Wootton—Second, George Morrison, gardener to Curwen Stoddart, Jr., Esq., Rydal, Pa.

Sunrise First, John Welsh Young.

Bride—Second, Robert Forrest, gardener to Clement B. Newbold, Esq., Jenkintown, Pa.

Bridesmaid—Second, Samuel Batchler, gardener to Clement B. Newbold, Esq., Jenkintown.

Souvenir de Wootton—First, George Morrison.

Groups, Pot Plants and Special Displays.

Group of roses in pots, arranged for effect, and covering 25 square feet of space—First prize presented by James W. Paul, Jr., Esq., president of the Pennsylvania Horticultural Society; second prize presented by The E. G. Hill Co., Richmond, Ind.—First, Wm. Kleinheinz, gardener to P. A. B. Widener, Esq., Ogontz, Pa.; second, Joseph Hurley, gardener to James W. Paul, Jr., Esq., Radnor, Pa.

Fifty blooms of American Beauty rose, the "Executive Committee's Prizes"—First, John Burton; second, Adolph Fahrenwald, Roslyn, Pa.

Any variety of rose (American Beauty and Queen of Edgely) 50 blooms—First, Benjamin Dorrance, Dorrancetown, Pa.; second, Benjamin Dorrance.

The largest and best display of cut roses, not more than 25 blooms nor less than six blooms of any one variety to be staged. First prize presented by President F. R. Newbold—First, Benjamin Dorrance; third, Wm. Kleinheinz.

Climbing Roses in Pots.

Crimson Rambler—First, Ernst Schreiber.

Special Prizes.

Hybrid perpetual roses, 24 plants, six each of four varieties, in not over eight-inch pots. Silver cup offered by H. Bayersdorfer & Co., Philadelphia—Awarded to Joseph Hurley.

Roses, cut flowers, Liberty, one vase of 50 blooms. Silver cup offered by Robert Scott & Son, Sharon Hill, Pa.—Awarded to Adolph Fahrenwald.

Stove and greenhouse foliage plants, 12 plants, palms or ferns not admissible. Silver pitcher offered by Henry A. Dreer, Inc., Philadelphia—Awarded to John Hobson.

The largest and best display of roses grown over 150 miles from Philadelphia. Silver cup offered by Benjamin Dorrance, Dorrancetown, Pa.—Awarded to Peter Crowe, Utica N. Y.

The Lord & Burnham Challenge Cup, presented by the Lord & Burnham Co., Irvington-on-Hudson, N. Y—Awarded to John Burton for American Beauty roses.

The Banquet.

At the banquet tendered the visiting florists and members of the American Rose Society by the Florists' Club of Philadelphia, which occurred on Wednesday evening, about seventy members and friends were present.

On the menu it was set forth that John Westcott, president of the Philadelphia Florists' Club, would act as toastmaster, but he relegated this duty to ex-Mayor Smith, who performed the function in his usual acceptable manner.

The toast "Our Honored Guests" was, in the absence of F. R. Newbold, president of the American Rose Society, responded to by Henry A. Siebrecht, of New York.

President Burton replied for the Society of American Florists. In the course of his remarks he said how convenient it was to have the American Rose Society's show in Philadelphia, for then it was much easier for the growers to take their prizes home than when they had to go to New York and get them.

William J. Stewart responded for the Horticultural Press, remarking that that institution was the best thing the trade; it not only published their doings, but was also a great he in keeping some matters from bei published. The horticulturists w a satisfactory "bunch" all over t country, and the press was their b friend.

H. Hughes then gave a vocal solo a pleasing manner, after which Rob Craig answered to the toast of "T Rose." Mr. Craig said the shamro appealed to the Irishman, the thistle the Scotchman, and the cornflower the German, but the rose appeals everybody. When that noble Scot poet, Burns, was at the height of inspiration, and pouring forth the hig est sentiments that he could utter, did so when he sang, "My love is lik red, red rose, that's newly sprung June." Mr. Craig also sang, at the quest of the toastmaster, the old Sc tish ballad, "Loch Lomond."

The next toast was "Progress in H ticulture," and should have been sponded to by E. G. Hill, of Richmo Ind., who was unable to be prese F. R. Mathison substituted and hand the subject in a masterful man Among other things he asserted tha should be possible for us to grow our bulbs required for forcing p poses. The percentage of lilies wh have been diseased has been very la and he thought the time would c when we could produce bulbs here. lilies can be grown successfully in M sachusetts and probably some ot parts of the country.

George C. Watson then made a remarks. Henry F. Michell respon for the Seed Trade, and Charles Eimerman for The Ladies.

Among the New York visitors pres were F. L. Moore, John B. Nugent, Henry Hentz, Jr., Leonard Barron, C. Steinhoff, Mr. Bonnot, Alfred Langjahr, Robert Simpson, J. A. Sh S. C. Nash, E. G. Asmus, John N. James Begbie, C. G. Weeber, H. Siebrecht and S. S. Butterfield.

During the afternoon a return b ing match was played between Philadelphians and Baltimoreans. game was rolled in the alleys co Eleventh and Arch streets, and resu in a victory for Philadelphia.

Show of Pennsylvania Horticultural Soci

In the displays competing for Pennsylvania Horticultural Soci premiums were to be seen many things in the plant line, notably splendid plants of Cineraria stel Some of the prize-winning specim grown in eight-inch pots, were at three feet high, with a spread of ers as much as 30 inches across. type of cineraria will undoubtedl a good thing for commercial purp as, besides being abundantly flor ous, the colors of many of the bl are also very pleasing.

Lager & Hurrell, Summit, N. J., a very fine exhibit of orchids in flo and Hugh Graham showed some standard plants in bloom of Ac pubescens, Peter Crowe, Utica, N exhibited a plant of his new Adian Croweanum, not for competition. ert Craig & Sons, Philadelphia, sh fine plants of double flowering ries, and Westcott's Laurel Hill N ery had a mixed group of plants in center of the main hall that conta many choice specimens.

Scattered about in different par the hall and in the foyer and on sides of the staircase were many flowering plants, including large s men rhododendrons, genistas, drangeas and marguerites.

A special prize was awarded to W cott's Laurel Hill Nurseries, Phil phia, for group of decorative p Certificate of Merit to Henry A. D Inc., for variegated Scarlet Sage similar award to A. Herrington, M son, N. J., for new carnations Ph and Una. Certificate of merit to N. May, Summit, N. J., for new ca tion, The Bride. Special mentio Henry A. Dreer, Inc., for Pand Sanderii. Special mention to Joh Haines, Bethlehem, Pa., for colle of seedling carnations. Special tion to C. W. Cox, Philadelphia, group of hydrangeas and spiræas special mention to Robert Cra Sons, Philadelphia, for Japanese ch trees in bloom.

Robert Craig & Sons were aw second prize for six pots, or pan Lilium Harrisii.

IMPROVEMENT OF ROSES BY BUD SELECTION

Or, Blind vs. Flowering Wood for Rose Cuttings.

Read by PROFESSOR L. C. CORBETT, Horticulturist, Department of Agriculture, Washington, D. C.

The results which are recorded in the article prepared under the above title are based on a series of tests with rose cuttings made from "blind" and "flowering" wood, and cover a period of five years.

The work was undertaken to settle a point in dispute among commercial growers of roses as to the relative value of plants grown from blind and flowering wood for flower production.

View Point, or Questions to be Settled.

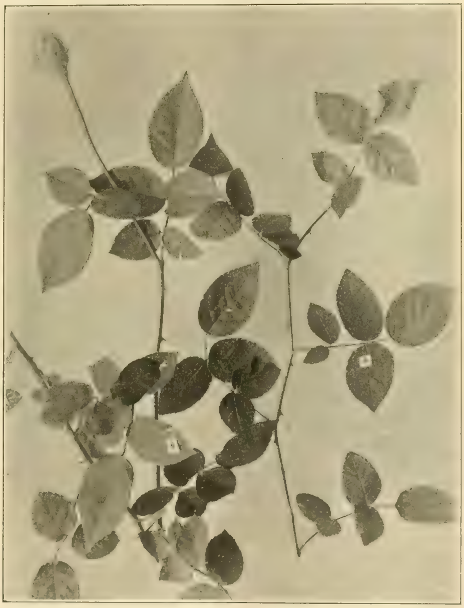
1. Do cuttings tend to perpetuate the individual peculiarities of the parent branch from which they are taken?
2. Can accumulative results be obtained from a continuous use of cuttings from wood with like habits? i. e., can the flowering habit of plants be increased by the continuous use of flowering wood selected through successive years from plants which have themselves been produced from flowering wood?

For many years discussion has been rife among commercial growers of roses in regard to the flower or bloom-producing power of plants grown from what is known as "blind wood," and those grown from "flowering wood." These terms are familiar to all accustomed to the propagation and cultivation of the rose under glass; but in order that none may hold a misconception of the point in question, I herewith present a figure representing the two types of wood spoken of. The branch at (a) in the engraving represents a characteristic shoot of the so-called "blind wood." This shoot, it will be noticed, is of slender growth, somewhat willowy in character, and is terminated by a leaf instead of a flower bud. Branch (b) is a flowering wood shoot, as is indicated by the terminal flower bud. As a rule "flowering shoots" are larger and more vigorous, but are also softer and contain a larger percentage of pith in proportion to the woody tissue than "blind wood" shoots. In general, however, the "flowering wood" shoots are longer than the "blind wood" branches, and if the flowers are cut with short stems, then there is a considerable length of wood suitable for purposes of propagation at the base of each flowering shoot. This wood is harder and more mature than the wood close to the base of the bud, and for that reason is better suited for making cuttings. With plants which are blooming profusely it not uncommonly happens that the whole length of the flowering shoot is needed to satisfy the market demand for long-stemmed roses, and the supply of suitable wood from which to propagate the next season's stock of plants is greatly lessened, or it may be entirely cut off. But there is always a greater or less supply of "blind wood." Consequently, why not use it for purposes of propagation? If the plants grown from blind wood do not perpetuate the tendency of the parent shoot (which are non-flowering), then there can be no objection to its use for the purpose of propagating the next season's stock. But if it does perpetuate the tendency of the parent stem, then there is danger.

In order that more definite statements might be made on this point, the writer has for five years carried on a test with rose plants from the two types of wood above mentioned. Before stating the results of this experiment, however, I wish to call to mind a few of the experiments which have been made which throw light upon the point in question.

Do cuttings tend to perpetuate the peculiarities of the parent branch, from which they are taken? To answer this, I needly hardly do more than call attention to the fact that propagation by cuttings is employed almost exclusively for the perpetuation of cultural varieties of all fruit and ornamental plants which are capable of being grown from cuttings. Many annual plants, however, come true from seed and varietal differences, while not so constant as in plants grown from cuttings are, nevertheless, sufficiently close for all commercial purposes. If we were to go a step farther, we might be justified in considering the various processes of budding and grafting as identical in their results with that of propagation by cuttings.

Budding and grafting are in reality processes of division, the same as is the growing of plants from cuttings. In all three of these modes of reproduction the results are so constant that we never stop to question the fact; yet we constantly commit the blunder of ignoring qualities quite as important as the varietal peculiarity itself. In fruit growing, nurserymen propagate from a Baldwin tree, whether it has ever borne fruit or not, simply because they know it to be a Baldwin. Yet in the face of this we are being taught by our advance agents that each tree has an individuality, and, in fact, that each branch and bud is in its peculiar way different from every other branch or bud, even upon the same tree. If we accept these statements as true, and we have no good reason to doubt them, then the peculiar tendencies of the plant, or of a branch of a plant, may be expected to play a more or less important part in determining the behavior of the plant or plants propagated from it. Orchardists have observed these differences, and are slowly coming to exercise greater care in the selection of cions. This precaution not only influences fruit production, but it has been clearly pointed out by Smith, Fairchild and others the health of plants from which buds and cions are taken measures to a very marked degree the health and longevity of the resulting tree.



FLOWERING AND BLIND WOOD SHOOTS OF ROSES, USED BY PROF. CORBETT TO ILLUSTRATE HIS LECTURE.

If we find these differences among plants grown from buds and cions, quite as marked peculiarities may be anticipated in plants grown from cuttings. Upon this point recorded observations are exceedingly meager, but some light can be gathered from the work published by myself in the Ninth Annual Report of the West Virginia Agricultural Experiment Station. From these studies it is evident that varieties are perpetuated true to type by cuttings through many generations. A single exception in the case of the tomato entering to break the constancy of the results. Not only are general varietal differences retained, but acquired characters also, temporarily, at least, as is shown in cuttings of grape, poplars, currants, etc., grown in Northern and Southern latitudes. For a specific example of this, nothing could be more conclusive than the results shown by New York grown potatoes, given one season's outing in Maine, for, when brought back to New York the next year, they retained their Maine tendency towards increased vigor and yield.

Trees propagated from fruitful trees are themselves more fruitful. Potatoes grown a year in the North become more prolific. Plants grown from cuttings, taken from Northern and Southern-grown parents of the same species, retain the characteriticss of their parents. What, then, should be expected from plants grown from blind and flowering wood? To anticipate the results of the test I will state that they accord with and justify the logical conclusion which would follow from the particular instances above set forth. In this test rose plants propagated from "flowering wood" gave on the average 29 4-9 blooms per plant for the season, while the "blind wood" plants produced 11½ flowers per plant.

Details of the Experiment.

In the Spring of 1897, when the time for making rose cuttings had arrived, cuttings were made from both flowering and blind wood for each of the varieties of roses then in the house. The cuttings were all made on the same day, placed in the same cutting frame in contiguous rows. In all respects the conditions for the several cuttings were as nearly the same as it is possible to obtain in a greenhouse.

On February 16 the cutting plants were examined and potted, with the following results:

Variety	Total No.	No. Rooted.	No. Callused	No. Dead
Bride, flower	15	9	6	
Bride, blind	21	9	9	2
Bridesmaid, flower	9	5	4	.
Bridesmaid, blind	23	15	8	.
Perle des Jardins, flower	15	2	11	2
Perle des Jardins, blind	17	7	7	3
Mme. Hoste, flower	13	5	8	.
Mme. Hoste, blind	9	1	8	.
Meteor, flower	18	11	3	4
Meteor, blind	5	4	1	.

From this it would appear that there is little difference in the tendency to form roots between the cuttings made from flowering and blind wood.

From this time until the plants were set in their permanent places upon the greenhouse benches (August 19, 1897), they were given like treatment. They were grown in pots in a sunny greenhouse, and all received the same number of shifts, and like attention in regard to soil, water, and food supply. As the plants were planted upon the benches August 19, the following note was made: "At this time there is little difference in the size and general vigor of the plants from the blind and flowering wood cuttings."

As soon as the plants became established in the soil on the bench growth on all was vigorous, and while there was a marked difference in the growth and general behavior of different varieties, there was no notable difference in vigor between the blind wood and flowering wood of the same variety.

The bloom record of the several lots is quite different, however, as is shown in the accompanying table, which gives the total number of flowers produced between December 1, 1897, and July 1, 1898:

Variety.	No. Pl'ts.	No. Bl'ms.	Average.
Bride, flower	13	242	18 8-13
Bride, blind	18	32	1 7-9
Bridesmaid, flower	8	192	24
Bridesmaid, blind	3	56	18 2-3
Perle des Jardins, flower	8	141	17⅝
Perle des Jardines, blind	14	224	16
Mme. Hoste, flower	7	204	29 1-7
Mme. Hoste, blind	9	176	19 5-9
Total No blind	44	488	11 1-11
Total No. flower	35	779	22 9-35

As is seen from the table, the product of the flowering wood plants in this one year's test was more than double that of the blind wood plants, amounting in this particular instance to 156 per cent. gain in favor of the flowering wood plants.

During the forcing season of 1898 and 1899, extending over the same period as in 1897 and 1898, i. e., from December 1 to May 31, inclusive, the two varieties retained in the experiment produced bloom as follows:

1898-99	No. Pl'nts	No. Bl'ms	Average
Bride, blind	13	113	8 9-13
Bride, flower	15	253	16 13-15
Bridesmaid, blind	8	119	14⅞
Bridesmaid, flower	12	210	17½

The results here recorded show the superiority of the flowering wood over the blind wood plants. But strange as it may appear, the difference between the flower-producing power of the plants grown from flowering wood and from blind wood is less than in the first generation, and this, despite the fact that the plants used in this test were grown from cuttings selected from plants used in the previous years' tests.

History of the Second Year Plants.

The flowering wood plants used in the tests of 1898 and 1899 were grown from cuttings selected from the base of flowering shoots produced by the plants previously grown from flowering wood. This course was followed in order to test the effect of constant selection in one direction, the idea being to secure plants with the maximum blooming capacity. The experiment was to test a theory which may be stated as follows: If flowering wood from commercial plants is capable of producing plants able to throw more than double the number of blooms produced from similar plants grown from blind wood, is it not possible by selecting flowering wood from plants grown from flowering wood to increase the flower-producing tendency in a distinct strain of forcing plants? Beginning with blind and flowering wood from good commercial plants of Bride and Bridesmaid in the Spring of 1897, plants were grown and flowered in the Winter of 1897 and 1898; from these, as above stated, cuttings were taken and flowered during the Winter of 1898-1899; and from these, in turn, came the flowering plants for 1899 and 1900, and so on for five years; the flowering plants being from flowering plants of the previous season in each and every case. The blind wood plants were treated in exactly the same way, blind wood cuttings from blind wood plants produced the blind wood plants for the succeeding season, and so on for the five years over which the experiment has now extended. The following records for each of the years 1899-1900, 1900-1901, and 1901-1902 serve to show how constantly the flowering wood plants retain their supremacy over those grown from blind wood:

Record from Dec. 1 to May 31, inc.

1899-1900.	No. Pl'nts.	No. Bl'ms.	Average.
Bride, blind	15	190	12 2-3
Bride, flower	18	192	10 2-3
Bridesmaid, blind	18	137	7 11-18
Bridesmaid, flower	18	220	12 2-9

Record from Dec. 1 to May 31, inc.

1900-1901-	No. Pl'ts.	No. Bl'ms.	Average.
Bride, blind	17	59	3 8-17
Bride, flower	4	110	27½
Bridesmaid, blind	16	67	4 3-16
Bridesmaid, flower	14	80	5 5-7

Record from Dec. 1 to May 31, inc.

1901-1902.	No. Pl'nts.	No. Bl'ms.	Average.
Bride, blind	14	80	5 5-7
Bride, flower	16	124	7¾
Bridesmaid, blind	16	98	6⅛
Bridesmaid, flower	12	136	11 1-3

Record of Plants Second Year on Bench.

Record from Dec. 1 to May 31, inc.

1900-1901.	No. Pl'ts.	No. Bl'ms.	Average.
Bride, Blind	14	193	13 1-14
Bride, flower	8	223	27⅞
Bridesmaid, blind	10	138	13 4-5
Bridesmaid, flower	12	183	15¾

*Cutting plants set on bench in July.

But, strange as it may seem, there is no appparent cumlative effect from the selection of cuttings from flowering wood plants. Neither is there any marked degredation from the continuous use of blind wood. True, there is a constant falling off in the average number of flowers produced per plant from the first season to the close of the experiment, but the result is not more marked in the case of the blind wood plants than with the flowering wood plants.

The following table, which summarizes the results for the five years, is of interest in that it shows but a single departure from the rule that flowering wood produces plants which are more floriferous than those grown from blind wood:

Average Number Flowers per Plant for Season—Dec. 1 to May 31, Inc.

Year.	Bride (Blind)	Bride (Flower)	Bridesmaid (B)	Bridesmaid (F)
1897-98	1.88	19.84	19	28.62
1898-99	8.66	16.86	14.87	17.5
1899-00	12.66	10.66	7.62	12.22
1900-01	12.21	27.87	13.8	15.25
1901-02	5.71	7.75	6.12	11.33
Ave. for 5 years.	8.26	16.59	12.29	16.98

This is seen in the case of the blind wood plants of Bride grown during the forcing season of 1899 and 1900, in which year this particular lot of plants produced an average of two blooms per plant more than did the flowering plants of the same variety. The table is of interest also in showing the ratio of the flowering wood plants to the blind wood plants based on the average number of flowers produced per plant during the season. In the case of Bride the blind plants averaged 8.26 blooms per plant, while the flowering plants produced 16.59 blooms per plant, or a little more than twice as many. In the case of Bridesmaid,' the difference is very decided, but not so great as with Bride. Bridesmaid blind produced an average of 12.29 blooms per plant, while the "flowering wood" plants of the same variety produced 16.98, or one and one-third times as many as the blind wood plants.

THE NEW PINK ROSE SHOWN BY BREITMEYER & SONS, DETROIT, AND AWARDED THE SILVER MEDAL OF THE AMERICAN ROSE SOCIETY.

Comparison of First and Second Year Plants.

In the course of these observations a cultural problem of some moment presented itself, and as it could be brought under observation without deranging the observations on the production of bloom from blind and flowering wood plants, the experiments were planned to admit of retaining a number of plants upon the benches a second season in order to compare their flower-producing power with plants grown from cuttings and placed on the benches in July for the succeeding Winter's flower supply. Accordingly 14 blind and 8 flowering wood Bride, with 10 blind and 12 flowering wood Bridesmaid plants were retained on the middle bench of the house used continuously in this test. These plants were severely pruned in August, after having been kept quite dry and in active during July. After pruning at least one-half of the soil of the bench was replaced by fresh compost. The earth was removed from on top the roots and between the plants and replaced with fresh earth. After this treatment they were slowly started into growth and the record of flower production begun in October. The following table will serve to show the bloom record of these plants:

Month.	Bride. Blind.	Bride. Flower.	Bridesmaid. Blind.	Bridesmaid. Flower.
October	57	49	51	49
Nov'mb'r	25	29	15	20
December	39	36	33	33
January	14	18	9	19
February	28	26	18	29
March	46	47	26	41
April	39	47	34	33
May	27	49	18	28
Totals	275	301	204	252
Ave per plant	19.6	37.6	20.4	21

In the case of plants grown from cuttings struck March 11, and planted on the benches in July, the record was as follows:

Month.	Bride. Blind.	Bride. Flower.	Bridesmaid. Blind.	Bridesmaid. Flower.
October	4	10	7	5
Nov'mber	6	5	1	10
December		2	5	2
January	4	8	3	7
February	7	12	7	7
March	8	11	12	16
April	19	40	22	29
May	21	37	18	19
Totals	69	125	75	95
Ave. No. per plant	4.05	31.25	4.68	6.7

From the comparison of the average number of flowers produced per plant from October 1 to May 31, inclusive, in each of the two sets, it is evident that there is little difference between the two, but upon comparing the monthly flower product of the two it at once becomes apparent that the two-year-old plants produced their crop in the Fall and early Winter, while the cutting plants produced the heaviest bloom later in the season. One must, therefore, be guided by the demands of market. If a heavy crop before the holidays is the end to be achieved, then year-old plants are desirable, but if the rose market is more profitable from the first of February to the first of June, the cutting plants will give best return. While these results are interesting in showing the value of strong year-old plants, we do not consider that the record of the one season during which this comparison was made sufficient to be taken as a basis for extensive commercial undertakings. With the tests of blind and flowering wood plants, however, the case is different, and the results may be considered conclusive.

Deductions.

It is clear from the results of these tests that the tendencies manifest in a branch are perpetuated from generation to generation in plants propagated by sexual processes.

It is equally demonstrated that cumlative results are not to be expected by selecting parts showing like tendencies through successive generations. The flowering habit of plants which themselves had been produced from flowering wood was not increased, even in the fifth generation, over what it was in the first. On the other hand, plants repeatedly propagated from blind wood through five successive generations were not markedly less floriferous in the fifth than in the first generation.

In both plants propagated from blind and from flowering wood, there was a slight tendency towards lessened flower production. This may be accounted for in that the stock from which the plants were propagated each season had been grown and forced under artificial conditions, and no attention was given to selecting cuttings from the strongest plants. The commercial side of this experiment, is of course, the most important one from the standpoint of the practical grower. It is clearly more ecomonical for the florist to produce his plants each season from blind wood, and since there is no cumulative effect from such a procedure, the plants so produced are not necessarily less floriferous than the parent stock. But where bloom rather than stock plants is the end sought the tests above recorded are emphatic in declaring the superiority in this respect of plants grown from flowering wood. A rose grower can well afford to send short-stemmed roses to market during the months of January and February, if by so doing he can secure sufficient flowering wood for propagating purposes to insure a stand of flowering wood plants for the production of the succeeding crop.

New Roses.

Paper presented by E. G. Hill before The American Rose Society, at Philadelphia, March 25, 1903.

There is little to chronicle relative to the new additions to the rose family, and especially is this true concerning new varieties suitable for forcing purposes. Ivory, introduced last year, is a splendid producer of buds and flowers during the Winter months; in fact, is considered of unusual merit and value as a white forcing rose. This variety is thought highly of by nearly all the growers who have given it a trial this year, and we hear of large increase to be planted of this variety; this would seem to indicate its popularity and standing. The variety is lacking in foliage, and this is a very pronounced defect; nevertheless, it has so many good qualities that it more than counterbalances this weak point.

Souvenir de Pierre Notting was supposed to have attributes and qualities which would commend it as a forcing variety. The flower is a beautiful combination of yellow and pink, with the yellow suffusion predominating; it is of good size, produces finely formed buds, but unfortunately so many of the outer petals are defective and lacking in texture that it practically disqualifies the rose for Winter work. This variety should make a fine outdoor bedder in sections where Summer bloom is desired. It should also make a nice rose for massing; its fine foliage, with its deep coloring, lend a charm that is possessed by but few varieties.

Franz Deegen—My prediction is that this variety will grow in favor as its Winter-forcing qualities become better and more generally known. It is a good, vigorous grower, producing long canes not unlike those of Kaiserin Augusta Victoria, and is remarkably free in producing its buds during the Winter months. It likes good culture, and thrives with good food and plenty of it. The color is a charming tint of yellow, which has a depth seen in but few roses. I would certainly advise a trial of this rose on at least a limited scale, so that it may have a universal test over the country. This variety has grown in our estimation, as we have noted its behavior the past few months.

Perle Von Godesburg—This was heralded as a yellow sport from Kaiserin Augusta Victoria, but only one bloom out of a great number shows any pure yellow in coloring. It, in fact, has so few flowers that differ from the variety from which it sported, that it will hardly pass as a distinct sort. There is, however, a sufficient number of yellow flowers to show its tendency to sport nto a distinct variety.

Saxonia—This is a variety from Ger- nany; it is claimed to be a seedling rom Golden Gate. The growth and general make-up of the flower show its elationship to its American parent. It has not been tested sufficiently to de- ermine its Winter-blooming qualifica- ions, but we are inclined to think well of the variety. It has finer coloring han Golden Gate, and is somewhat on he order of Mme. Pierre Guillot in its narkings, and the bud has a much bet- er form.

Duchess of Portland is one of Alex. Dickson's seedlings, and a most mag- nificent rose it is. It is larger and of heavier texture than our famous Kai- erin Augusta Victoria, a truly noble lower; but its neck is so weak that ts flowers look down at Mother Earth. This is most unfortunate, for it has many charms to its credit.

Mildred Grant, another of Dickson's ine hybrid teas, showing its hybrid blood in its growth and form of flower o a most remarkable degree, is pearl pink in color, a choice, refined flower. This rose won the English Rose So- iety's gold medal. In favored places we think this variety will certainly be heard from, especially for garden pur- poses.

Prince de Bulgaria is a valuable new olor in the hybrid tea class—buff yel- ow shaded with apricot. The form of he bloom is not unlike those of many f the H. Ps., its flower being very rettily shaped, quite full and double. This should make a fine pot variety as ell as a choice bedding subject. The etals are too short for its use as a ut flower, and we hardly think it ould force were it tried.

William Askew—The plant is of turdy growth, producing freely its fine arge flowers. This is a variety well orth a trial for garden or pot culture. t is one of Mr. Guillot's productions, nd is possibly the very best of his ter varieties.

Laura Wattine is a Soupert produc- on, and we think, here at Richmond, ne of the very best that this firm has roduced. It is a brilliant dark red, ith a fine long bud and good double ower. It is a cross between Marie aumann and Mme. Caroline Testout. his should make a valuable addition or garden purposes.

The above-mentioned varieties have ll been flowered here in considerable umbers, and we believe them to be romising roses in their respective asses. They are the pick of over a undred new introductions of the past vo years, and are worthy of trial by ll lovers of garden roses.

The prospect of some new American eedling roses is fairly promising, and e anticipate that a few good novel- es will be introduced in 1904.

The varieties will be grown in con- derable quantity, and if past experi- nce is duplicated by these varieties hen grown in large numbers we an- cipate a pleasant surprise for Ameri- n rose growers.

The Work of the American Rose Society.

ead by Robert Craig, Philadelphia, before the American Rose Society.

I am asked to say something to you the work of the American Rose So- ety, which is still in its infancy and ot yet organized for very effective rvice. In the month of March, 1899, out twenty-five individuals interested the cultivation of the rose met to- ther in New York to organize a so- ety, somewhat on the lines of the ational Rose Society of England, hich has been in existence since 1876 d now has a membership of about e thousand. Our young society now mbers about three hundred.

The president of the British National ciety has been, for many years, the ean of Rochester, who is known in any parts of the world as an enthusi- tic and very capable cultivator of the se. Its vice-president is the Duke of rtland, and it has an executive com- ttee of forty. Among its members e many of the most distinguished and ltured people of Great Britain, who d in the cultivation, study and devel- ment of the rose in its many types a st delightful occupation for their sure time. Of all the forms which auty takes in the Floral Kingdom, ne is so altogether charming and ely as the rose, and when more people can be brought to know that many beautiful varieties of roses are entirely hardy in this climate in the open garden, and many more flourish with slight protection in the Winter, the membership of this society should gradually increase until we, from membership dues, have sufficient funds to effectively carry on the work which we have set out to do.

With details of the work, I need not take up your time. These have been admirably stated in the address of the president at the last annual meeting in New York. The society is to "exercise a watchful eye over the production, introduction, and distribution of the rose;" to hold exhibitions; to look after synonomy and nomenclature; and in these and other details we may have the benefit of the experience of the older societies in Europe, which are now doing very effective work. In London the growth of the National Rose Society is likely to be stimulated by the fact that the Royal Horticultural Society is to construct a new building especially adapted for floral exhibitions. Hitherto, their shows, while very important and well-patronized events, have been held in more or less unsuitable and inconvenient buildings, and great benefit is therefore expected from the use of a place especially constructed for their purpose. We can congratulate ourselves here in Philadelphia that we have a beautiful hall, which is always to be had for any creditable horticultural exhibition.

MYERS & SAMTMAN'S PRIZE-WINNING VASE OF QEEEN OF EDGELY ROSE AT SHOW OF AMERICAN ROSE SOCIETY.

Now, I want to emphasize one branch of the work of our young Rose Society, which, I take it, is of the greatest moment. The most necessary work for the members to do is to first get more members. Instead of three hundred members, as we have now, in a country like this we should have a membership of at least one thousand, and five thousand would be proportionately better. These members should be largely drawn from the amateur ranks, and what can the society offer them as a fair return for the time and money they invest? Obviously, the best that can be done is to issue frequent bulletins, say, at least four times a year, with the latest facts about roses; of the new sorts which make their appearance from time to time; of the progress that is being made by the crossing of different types, thus producing new shades of color, modifications of form and greater and more delicious fragrance, as well as adding to the hardiness of certain varieties and types, and similar information along all the lines of rose culture.

The varieties which do well in the outdoor garden in our climatic conditions are quite few in number. We want more roses, for instance, in the ever-blooming class, like Maman Cochet, white and pink; Gruss an Teplitz, bright crimson; Kaiserin Augusta Victoria, white; Clothilde Soupert, pink cluster; Papa Gontier, coral red; Etoile de Lyon' yellow; and in the hybrid perpetual class, Mrs. John Laing, pink; Clio, blush; Baron Bonstettin, crimson; Capt. Haywood, bright red; Rodochanachie, bright cerise; Mlle. Gabriel Luizet, clear pink, and Paul Neyron, deep rose.

Now, this and kindred information about roses is not so accessible as it should be, and in the collecting and diffusing of such facts the most useful work of the society consists. But we are as yet too feeble financially to accomplish much. To properly do this would be sufficient work to occupy the entire time of a competent secretary. Allow me, by way of illustration, to read an extract from a bulletin issued by the South Dakota United States Experiment Station in 1901:

"Roses.—The list of roses sufficiently hardy for this State without Winter protection is decidedly short. Many varieties of hybrid remontant or hybrid perpetual roses, have Winter-killed at this station, although given Winter protection with earth and mulch. Magna Charta, Crimson Rambler and the Dawson also proved tender. The hybrid perpetuals must be given very careful Winter protection in the larger part of the State. Of yellow roses, the Harison Yellow is very hardy and a profuse bloomer through June; a white double variety, evidently of the same species (Rosa lutea), name undetermined, obtained in a local garden, is equally hardy. Of climbing roses, the Multiflora, with dark red double flowers, has proved hardy for a number of years in a private local garden. Queen of the Prairies, with rose red double flowers, stands fairly well with good Winter protection. Of double white roses, Madame Plantier is probably the hardiest; at present it is not in the collection.

"Of single roses the Siberian (Rosa rugosa) is perfectly hardy. Plant breeders have been busy of late years in Europe and America hybridizing this rose with various cultivated double roses. We imported several of these later productions last Fall. Two rugosa hybrids, imported from Germany and planted in the Spring of 1896 at this station, have proven sufficiently hardy to blossom freely without Winter protection, although not perfectly hardy. One is Madame Georges Bruant, with semi-double pure white fragrant flowers; the other is Madame Chas. Frederick Worth. This variety produces beautiful, double flowers in terminal clusters all Summer, beginning about July 1. The thick leathery wrinkled leaves show the influence of Rosa rugosa. Plants of this variety secured for Professor Budd, in Germany in 1894, by the writer have proven hardy and very desirable at the Iowa Experiment Station.

"It now appears probable that most of the future hardy double roses for the prairie northwest will have Rosa rugosa as one of their ancestors."

This interesting information about roses is published in a pamphlet devoted also to notes about trees, shrubs and herbaceous plants, and to be put in convenient form for rosarians should be published with other similar notes in bulletins devoted strictly to matters concerning the rose.

Let us, therefore, devote a large share of our energy to the acquisition of new members, to the end that we have sufficient income to properly pursue the work, and let us, in addition to our own work, bespeak the hearty co-operation of the journals devoted to horticulture for the amateur. I allude to such publications as Country Life, Floral Life, Gardening, and American Gardening, etc. What better service can they render to horticulture, to the advancement of which they are pledged, than to help us get new members. I doubt not if the matter be properly brought to their attention, their cordial co-operation will be secured.

Our annual exhibition should also have careful attention. This year we might have had a good exhibition of hybrid roses in pots if our schedule had been issued three months earlier. A dozen of our private gardeners and several professional florists have told me that if they had known sooner they would have willingly entered the competition and have procured in time a collection of hybrid and other roses to be shown in pots. Enough have been grown this season to show us how desirable these pot roses are at exhibitions of this kind.

In England the principal exhibition is held in June, because at that time, in the cool and moist climate of Great Britain, the outdoor roses are at their best, and roses may be brought to the show in good condition from all parts of the United Kingdom, while in this country the weather is usually so hot a dry that roses cut even on the morning of the show are wilted before night, and the rose-growing centers are so widely apart that the blooms cannot be had at the same time. For instance, the time of blooming in Boston is fully a week later than in Philadelphia. But while we cannot hope to equal the superb shows in England in June, we can have roses in superb form in March under glass, which for lack of sun the growers of England cannot do. In America, the roses under glass in the Winter and Spring are the finest in the world. Recently, in the neighborhood of London one of the largest and most expert growers there expended several hundred pounds in an experiment of growing roses under glass for Winter bloom, somewhat after the American method, but the experiment was a failure, as was a similar one in Belgium. They have not the bright sunshine in Winter which here enables us to produce fine blooms, so that, while we can seldom have fine shows in June, with outdoor roses, we can excel in Winter or early Spring with roses grown under glass.

Some official catalogue of roses is necessary to prevent confusion. Occasionally a rose will be known by two or more names, and the society could do good and necessary work in deter-

EXPOSITION BUILDING, MILWAUKEE, WHERE CONVENTION AND TRADE EXHIBIT OF S. A. F. WILL BE HELD IN AUGUST NEXT

mining which is the original and authentic one. This branch of the work has been very well done by the English society. I have here their very creditable official catalogue, with pictures of fine examples grown by members and photographed by them for the book. (Book exhibited and extracts read.) What a delightful and useful pastime for those having country homes, and well worthy imitation on this side of the water.

I hope the Rose Society will arrange to hold its next exhibition here in Philadelphia. In my judgment, the exhibitions should always be held in the same city for at least two successive years, so that the growers may profit by their experience of the first year. We can see here in Philadelphia where we have fallen short this year, and I am sure we can, next year, have a more interesting and creditable exhibition.

In conclusion, I will say that, although the progress of our young society has seemed slow, we must earnestly work for its success. One of the surprising and lamentable facts in connection with this young society has been the apathy and indifference of most of the professional growers of the country. They should join this society and contribute to its work as a matter of duty. Lord Bacon says, "I hold every man to be a debtor to his profession." There is no doubt as to the soundness of this sentiment. I think every florist, wholesale or retail, should join this society at once and induce as many amateurs to join as possible. This would be a small sacrifice compared to the amount of good that would be accomplished.

Correction.

In the special advertisement of Clucas & Boddington Co., New York, appearing in last week's issue, the item referring to, Dracæna terminalis canes should read $25.00 per 100 feet, in place of pounds. See corrected ad. in this week's issue, page 345.

New York.

For a Plant Market.

As mentioned in our notes last week, the New York Market Florists' Association held a meeting at the Clinton Market on Friday afternoon, March 20, for the purpose of discussing the market problem. Through the efforts of John Birnie, there was a fair representation of the Jersey plant growers (men who depend chiefly on a market for disposing of their product), and a few of the property owners in the immediate vicinity of Clinton market. There was also in attendance at the meeting Commissioner Woodbury, head of the Street Cleaning Department of the city; Alderman of the district, R. S. Doull, Commissioner Walker and Judge Wauhope Lynn.

Mr. Birnie acted as chairman and called upon Alderman Doull. That gentleman explained that the meeting had been called for the purpose of urging the city to erect a new market on the site where Clinton Market had stood since 1829. He said Commissioner Woodbury had recently recommended that the city's stables be erected here, but he hoped that they could prevail upon the commisssioner to find some other site for such a purpose and use his influence towards persuading the city officials to construct a building for market uses that would cost about $250,000, and in which there would also be accommodation for a fire company's rooms and for public baths.

Judge Lynn drew attention to the fact that two or three years ago a motion to erect a building that could be used for market and other purposes had been passed upon favorably by the Board of Aldermen. The Judge also waxed eloquent on the advantages of such a market.

Commissioner Woodbury spoke briefly. He did not hide the fact that his first thoughts are for the Street Cleaning Department, and that the site of the old Clinton Market offered the best available position on which to establish a permanent home, with stables and all other offices, for his department. The speaker hardly committed himself on the subject, but he did promise that he would have his men clear away the rubbish of the fallen building and have the space ready in a few days, so that the florists could use the land as an open-air market this Spring. At the suggestion of Judge Lynn a committee was appointed to go before Borough President Cantor and petition him to help the florists and others interested in their efforts to have a suitable market built. This committee consists of A. Schultheis, R. Dreyer, J. Birnie, H. C. Steinhoff, M. Smith, Judge Lynn, Commissioner Walker and Alderman Doull.

The promise of having an open-air market ready for occupancy in the near future met the desires of the plant men, and it was decided to open the market about Monday, March 30.

Members of the Association not notified of the meeting referred to above, should send their names and addresses to Peter F. Daly, P. O. Box 1, New Durham, N. J.

The Week's News.

William Plumb, who for many years has followed the profession of landscape gardener and has had charge of several well-known estates, will, on April 15, enter the commercial ranks as a rose grower. Mr. Plumb has taken the greenhouse establishment of P. Connelly, at Madison, N. J., and will grow roses for the New York market.

S. Jacobs & Sons, manufacturers of greenhouse building material, Flushing avenue, Brooklyn, is a long established firm and in addition to manufacturing the wood and ironwork for greenhouses, they do an immense business in hot-bed sash, the sales of which number 2,000 sash per year.

This firm was established in 1869 and has grown steadily ever since.

Charles Krombach, whose florist establishment is near Greenwood Cemetery, Brooklyn, has just purchased a piece of property fronting on Fort Hamilton avenue. He will cut up the newly acquired land into building lots.

A. Warrendorf, the Broadway retail florist, has taken the store at 37 West Twenty-eighth street and will carry on a whosesale commission florists' businesss under the title of The New Jersey Cut Flower Co.

John Einsel, who had the misfortune to have a leg broken a short time ago, is progresssing rapidly towards recovery.

The plant auction rooms are now i full swing. Hitherto hardy nurser stock has been the chief attraction, bu flowering greenhouse plants will soo be offered.

Willard Kervan has withdrawn fror the firm of the Kervan Company, an his address is now 359 Fifth avenue.

This afternoon (Friday) the commit tee from the New York Market Flor ists' Association will present their ap peal for a new market to Boroug President Cantor at the City Hall.

A. Dimmock, representative of Sande & Sons, St. Albans, England, arrive lately on his annual Spring tour, an took in the show at Philadelphia thi week.

James Beghie, one of Clucas & Bod dington's energetic drummers, is bac from a commercial trip, having been o the road since November last, touch ing towns as far West as Denver, Col He reports a very successful trip.

That the New York wholesale florist are hustlers after business, and seek t further the interests of their consignor is evidenced by our advertising co umns. Owing to the shortage of coa in many localities the past Winter an the consequent closing down of severa establishments there is reason to be lieve that there will be a heavier de mand on the wholesale dealers for flow ers at Easter time than has occurre for several years past. That the sup ply of cut flowers in this city will l ample goes without saying, and outsid buyers need have no fear about receiv ing their quota if ordered in this cit If orders are placed with a firm tha has not previously been dealt wit however, it should be understood tha C. O. D. methods throw no reflection c the buyer. New York's wholesale flo ists are the most lenient business me on earth, with respect to credits, af a business acquaintance has once bee established.

Boston.

ws of the Week.

The Horticultural Club held its ular monthly meeting Thursday ning, James Rough presiding.

harles Evans, of Watertown, and bert Montgomery, of Wellesley, nt a few days in New York last k; and William W. Edgar, Fred R. thison, and William J. Stewart left Philadelphia this week.

he Anna Foster fern is now a firmly ablished staple in all the leading ail stores; it has proved a ready ler and from all reports has given good satisfaction as a house plant the Boston fern.

eorge A. Sutherland has a very fine of lilies in pots for Easter, and orts them selling fast.

ing Show Massachusetts Horticultural Society.

The awards for plants included following: J. S. Bailey's Cypri-lium Rothschildianum won first for gle orchid and W. P. Winsor's ntoglossum Rossii majus second. W. Breed was first for specimen lian azalea; William S. Ewell & Son ond.

he prizes for Spring bulbs were ided between William S. Ewell & , the Bussey Institution and Mrs. L. Gardner, the two former winning t and second prizes in the order ned for general display.

ilver gilt medals were awarded to nry A. Dreer, Philadelphia, Pa., for ndanus Sanderii and to Lager & rell, Summit, N. J., for a display orchids. A silver medal was grant-to James Stuart, gardener to George Fabyan, for superior cultivation cyclamen.

o roses were entered in the classes Bride, Bridesmaid, Souvenir du sident Carnot, nor any of the brids. For American Beauty, W. H. iott won first and the Floral Ex-ange, Edgely, Pa., second. W. H. iott was again first for Liberty, the Waban Rose Conservatories k first and second "for any other riety" with Golden Gate and Ivory.

'hursday was carnation day, and ch more interest was occasioned by added display. Patten & Co. ught in a fine collection, filling one le, in the center of which was a fine se of one hundred blooms, mixed, ich easily won first prize. On either e were arranged vases of Mrs. T. W. wson, J. H. Manley, Fair Maid, rry Fenn, Prosperity, Dorothy itney, Governor Roosevelt, Gover-r Wolcott and Gaiety; and a vase of s. M. A. Patten, which was only for hibition. Albert Roper sent in Fair id and Seedling No. 1, a white varie-ted. L. E. Small showed Fair Maid. H. Manley and Mrs. T. W. Lawson. e Little South Floral Company ged a vase of The Queen. H. A. evens had a vase of Governor Wol-t. Cressbrook was well shown by E. Dickerman, and J. S. Bailey had good vase of Mrs. T. W. Lawson.

he carnation awards were:

Crimson—M. A. Patten, with Governor Roosevelt; second, same firm, with Harry Fenn.

Dark Pink—M. A. Patten, with Mrs. Lawson; second, L. E. Small, same variety.

Light Pink—A. Roper, with Fair Maid, second, M. A. Patten, same variety.

Scarlet—M. A. Patten, with J. H. Manley, second, L. E. Small, also with that variety.

White—M. A. Patten, with Governor Wolcott; second, H. A. Stevens, same variety.

Yellow Variegated—M. A. Patten, with Dorothy Whitney.

White Variegated—M. A. Patten, with Prosperity; second, S. J. Reuter, with same variety.

Friday was set aside for violets. Norris F. Cornley had the largest display, showing Princess of Wales, Lady Hume Campbell, Imperial, Marie Louise, Neapolitan and The Farquhar. Col. Charles Pfaff and H. F. Calder also staged Lady Campbell, and George W. Ayer Princess of Wales.

Among the other additions to the show on Friday were the new Rambler rose, Hiawatha, from M. H. Walsh, of Woods Holl, and a vase of seedling carnation, Marion Patten Buxton, from George E. Buxton, of Nashua, N. H.

There was nothing special scheduled for Saturday, but Albert Roper brought in a very fine bunch of Fair Maid carnation for exhibition.

F. J. NORTON.

Buffalo.

News Notes.

A recent spell of weather so warm as to be difficult in which to favorably hold Easter stock has been succeeded by cooler days that are more normal, and plant growers are beginning to gauge fine details. The store men, as a rule, incline to call trade fair at present. The warmer weather, perhaps, influenced better displays at store openings, so very good orders were supplied. In this line on Tuesday J. H. Rebstock had a decoration for a new concern in the clothing line, besides supplying more or less quantities of blooms for giving away, the latter at stated count prices. He also had another good store decoration, and a swell dinner to fix up for at the Hotel Iroquois later in the week.

Annual Club Meeting and Banquet.

The annual meeting for election of officers was held on Tuesday evening in Mr. Kasting's wholesale store, and was followed by the annual banquet.

The election passed off uneventfully, with the following gentlemen at the helm for another year: Wm. Scott, president; Charles Hewson, vice-president; Wm. Legg, secretary; Emil Bruecker, membership secretary, and Charles H. Keitsch, treasurer. Advisory or executive board: W. F. Kasting, J. F. Cowell, and James Braik.

Annual reports of officers were heard, that of the treasurer showing a balance to the credit of the club.

Adjournment was then made to the banquet rooms of the Ellicott Club in Ellicott Square Building, where the table was finely decorated with a vase of truly magnificent Bridesmaid roses from Peter Crowe, of Utica, N. Y., carnations in vases and greens arranged on the cloth being further employed.

Thirty-eight persons partook of the feast, all craftsmen. From out-of-town were: Harry A. Bunyard, New York City; H. C. Baartman, Sassenheim, Holland; Fred G. Lewis and T. Mansfield, of Lockport; H. J. Wise, East Aurora, N. Y.; Chas. T. Guenther, Hamburg; George Stafflinger, Springville, N. Y., and David Scott, now of Corfu, N. Y. The younger element of the trade was conspicuous, and the city parks were well represented.

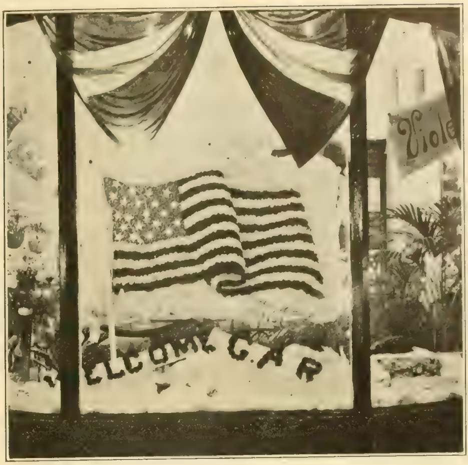
W. F. Kasting acted as toastmaster for the evening, and quickly imbued all with good feeling.

The evening was most pleasantly passed. Among the speakers were: Messrs. Braik, Scott, Palmer, Seymour, Long, Guenther, Legg, and others. Professor Cowell, though suffering from rheumatism, was present in the forepart of the evening.

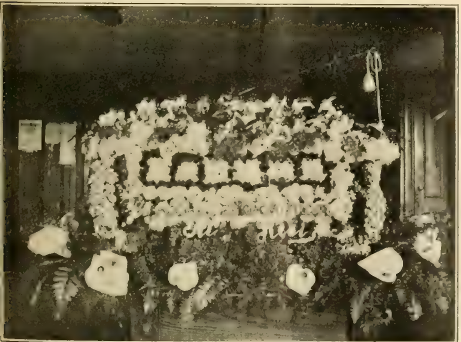
W. B. Grever now occupies a position behind the counters at Palmer & Sons.

Schwerdt & Berner, of Cheektowaga, have a supply of lily plants in pots reduced to 600 in number for this year. Genistas and hydrangeas are here grown, too. At Williamsville, C. B. Shisler has over 1,000 Easter lilies that are said to be unusually well done.

Some who should know presage a general scarcity in carnation blooms at Easter. VIDI.



THE AMERICAN FLAG IN IMMORTELLES



A TROLLEY CAR IN FLOWERS

Artist, N. F. Comley, Lexington, Mass.

A Floral Motor Car.

The illustration shown herewith represents an electric car in flowers, executed by Norris F. Comley, of Lexington, Mass., for the funeral of the motorman killed in the recent grade-crossing accident in Waltham, Mass. The flowers used were principally roses and carnations, the dashers being done in violets, while the base was made of ferns and callas. The design was six and a half feet in length.

F. J. N.

The American Flag.

The design illustrated represents the American flag. It was constructed of red, white and blue immortelles. The "wavy" effect in the design is most beautifully brought out. The artist was C. W. Wolf, of Washington, D. C.

St. Louis.

World's Fair Work.

Frederick W. Taylor, Chief of Agriculture and Horticulture, has made elaborate plans for the treatment of Floral Hill, on which the buildings will stand. One of the features will be a floral clock that will tell the exact time on a dial 100 feet in diameter. This will occupy the center of the northern slope of the hill. Names will be formed in plants of four men who have done great things in horticulture—Peter Henderson, Thomas Meehan, Henry Shaw, and J. Sterling Morton. These beds will be almost 1,000 feet long. The entire hill will be devoted to flowers. The ground covered by these plans embraces sixty-nine acres.

About Town.

Martin Reukauf, who represents H. Bayersdorfer & Co., Philadelphia, called on the trade last week.

The trade congratulated Wm. Adels last week. It's a nine-pound boy, and Will is the happiest man in town just now.

R. F. Tesson has got back from a week's visit to Chicago and Milwaukee. At the latter place he attended the executive committee meeting of the S. A. F.

J. F. Windt celebrated the twenty-fifth anniversary of his wedding last week. Mr. and Mrs. Windt's many friends called to pay their respects.

J. H. Billington will open his new retail place at 5415 Easton avenue on April 1. Mr. Billington was formerly a grower on Belt avenue.

The Ellison Floral Company opened up its new place last week at 3568 Olive street. Mrs. Wm. Ellison, formerly with Ellison & Tesson, is the manager. The firm is incorporated with a capital of $2,000, and the incorporators are Claude P. Berry, Harry Y. Ellison, and Alice Y. Ellison.

Report comes from Butte City, Mont., that Arthur Y. Ellison, formerly of this city, has got married. If this news be true, his many friends here send congratulations. ST. PATRICK.

A Carnation Show.

The annual carnation show, unde the auspices of the Gardener's Clul took place on March 23. As this exhibition is free to the public, the club ha no direct benefits from it, and there ar always expenses incurred which th club must liquidate, but the member believe that these shows are really ver beneficial to trade. This year's exhibition did not compare as to numbers wit that of last year, but the quality of th flowers was far superior. Some exceptionally fine blooms were on exhibition. I. H. Moss staged Chicago, a re sport of Mrs. G. M. Bradt, which wer immense. Mrs. G. M. Bradt, from th same exhibitor, were equally as good i size and substance. Mrs. Frances Joo was much in evidence, and shown b Halliday Bros. in fine condition. Th variety still holds here. The same fir exhibited Mrs. Lawson, Queen Louis and several other sorts in good shap Melba is still grown by Mr. Moss, an he finds a ready sale for it.

Fred Bauer's seedling, on the style Tiger, is an improvement on tha variety.

Easter and bulbous stocks we shown by Philip Welsh, of Waverl Lehr Bros. still cling to White Clou and they showed it well done.

John Cook had a fine lot of ro seedlings, among which was a variety the form of Mme. Caroline Testout, f which Mr. Cook predicts great thing He considers it one of the best roses has raised. Another, a Liberty seedling, crossed with a pink seedling, is light crimson color, and of good for A white seedling was also shown the same gentleman. Souvenir Pierre Notting was exhibited by hi but the flowers shown did not do t variety justice, as they were fro plants in 4-inch pots.

Charles Wagner, gardener to Mr. R. Diffendorffer, exhibited some we grown cinerarias and primroses. Jo Rider staged Genevieve Lord carnations of good quality.

Ulrich Brunner roses were shown Mr. Halligan, and Superintendent Se bold, of Patterson Park, loaned a co lection of ferns for decorative purpos

News Notes.

S. Feast & Sons had the deco tions for the Hibernian Society din on St. Patrick's Day. The work w well executed, the electrical display l ing especially fine. This firm's gree houses at Beechfield are all ablaze wi Easter stock. Their collection of de orative plants is no doubt the larg in this vicinity. They will build a lar addition to their palm house this co ing Summer. The lilies and hydrange are just right for Easter.

he Easter Outlook.

It is a pretty hard problem to ve a satisfactory idea of the outlook r Easter stock at this time, especially ies. While some growers think there ill be enough of these to meet all deands, others fear there will be a iortage. One thing which can be finitely stated is that the percentage good lily stock is not so large as a ar ago; it is also noticeable that the imber of blooms to a plant does not ach that of last year. The fortunate ies will be those who place their orrs early.

The supply of other bulbous stock ill equal that of last season, although lips may be in greater abundance.

Regarding roses and carnations, the evailing opinion among the wholelers is that there will be a sufficient pply of these flowers for all demands, though at present the market is etty well cleared of these two aples.

There will be the usual supply of owering plants, including some extra ie azaleas.

McKellar & Winterson report trade ith them better than last Spring. hey find a good market for their aster novelties.

The Foley Manufacturing Company port their sales of greenhouse conruction material as greater for one onth this year than it was for the hole of last year. This firm has patted a new cast iron gutter which they e introducing to the trade, and which pears to take well.

Visitors in town: Chas. Siebrecht, inona, Minn.; John Bertermann, Inanapolis, Ind.; C. H. Roney, Jameswn, N. Y.; D. MacRorie, South range, N. J.; Mr. Kintzele, Michigan ty, Ind.

ROBERT JOHNSTONE.

St. Paul.

ews Notes.

Charles Vogt, who was ailing for long time, has improved of late, and w looks as robust as ever.

The traveling fraternity have been ming in droves. We record the folwing: J. Vandermey, with Van Zann & Sons; H. Van Zonneadd, of Van nneadd Bros.; J. M. Jansen, reprenting C. Keur & Sons; G. Krosschell, Waarnaar & Co., and others from e land of windmills, dykes and Dutch ilbs; Joe Rolker, of the metropolis; J. Van Heiningen, of P. Loef Az & ., of Boskoop; M. J. Weppner, with e Wittbold Company, of Chicago.

The Ladies' Auxiliary to the Northestern Manufacturers' Association, ho so ably conducted the flower show st season, have decided to hold anher exhibition the coming Fall.

VERITAS.

Louisville, Ky.

eath of Wm. Schulz.

The sincere sympathy of the craft extended to Mr. and Mrs. Jacob hulz in the loss of their son Wilam, who died of typhoid fever, March . He was a most promising young an. He had the natural love of and lent for the making of a fine grower. e had spent several years with his ther, and for the past year and a alf had been employed with Walker McLean, of Youngstown, O. John alker came to Louisville to attend e funeral. The writer, who had iown Mr. Schulz for fifteen years, n from personal knowledge speak of s generous heart and brave charter.

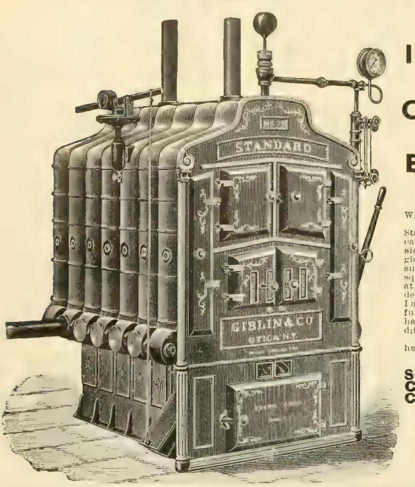
PEACE OF MIND



is not generally included in the cost of the heating apparatus, yet every florist knows how valuable it is to him to have an apparatus that he can arrange

IN THE EVENING

and know it will carry with a certainty the proper temperature until morning. This is

ONE OF THE FEATURES

of our boilers, as is fully

EXPLAINED BY THE

following letter:

W. D. SNELL, Newville, Herkimer Co., N. Y., Jan. 2, 1901, says:

"I wish to express my thorough satisfaction with the No. 70 Standard Sectional steam boiler which I placed in my greenhouses early in December last year. I have three houses, 20x65, located side by side, with glass in roofs and gables. The houses are built of glass and wood and contain in all about 5,000 square feet of glass surface. I have in use about 2,000 feet one-inch pipe, or about 700 square feet of radiation. I carry a temperature of about 50 degrees at night, but have had no difficulty in getting any higher temperature desired. I find that the boiler will run ten hours without attention. I attend to it about nine o'clock at night and it will run with no further attention until seven o'clock in the morning. The draft I have is not a good one, yet notwithstanding this objection, I have no difficulty in getting the fire up aud getting as much steam as I desire.

"I can thoroughly recommend the boiler, and will be glad to have you refer to me anyone that wants further information."

Send for our Greenhouse Catalogue.

We can name price delivered at any railroad station in the United States, and special price is given where our boilers are not used.

Review of the Market

NEW YORK.—There has been no arked change in the cut flower trade iring the last week. Roses are plentil enough to fill all demands, and so far s American Beauty are concerned it is ily the special grades that clear out all satisfactorily. The shorter grades this variety are generally imperfect, id it is a difficult matter to obtain anying like a decent average price for iem. Bride and Bridesmaid are at out the same prices as last quoted, ough the former variety does not move arly so well as the latter.

Violets are having quite a struggle to ep their end up. The vast quantities such Spring blossoms as daffodils, and ie low price at which No. 2 roses are tainable, give the street men a clear ld, and unless they can get violets at eir own figures they throw them down id devote their attention to the other pring flowers.

Lily of the valley is going slow, and rnations are not in any better condition. he best lilies are fetching 10c. Cattleyas ave assumed a rather stiffer position, c. being reached for some of them. weet peas are not up to their average uality, and the lowest quoted figure is ie rule rather than the exception.

Smilax and other green material are in ir demand, and prices remain unhanged.

BOSTON.—Owing to dull, rainy weather the early part of the week, business pened up very slow, and stock accumuated quickly, so that at present writing Wednesday) the market is overstocked nd the demand below normal. Roses ave become more plentiful this week, nd Bride and Bridesmaid, which were o scarce a week ago, are now plentiful nough to meet the demand. American eauty and Queen of Edgely are in good upply and move slowly. A few fancy pecials make $50.00 per 100, but the deand is not heavy enough to clean them p daily at that figure, and many are sold t $35.00 and $40.00. Extras make $25.00 o $30.00, and No. 1, $20.00 down to $16.00, hile the smaller grades fetch from $6.00 o $12.00. Bride and Bridesmaid, last eek, ran to $16.00 per 100 for specials or a few days, when they were scarce, ut now $12.50 is the ruling figure for he best, with No. 1 at $10.00, seconds t $6.00 to $8.00, and the smaller ones t $2.00 to $4.00 per 100.

Meteor make about the same prices as ride and Bridesmaid, and Liberty range rom $3.00 to $8.00 per 100, except for a ery limited supply of extra choice stock, or which $16.00 to $20.00 is realized. A ew Ulrich Brunner and General Jacqueminot arrived last week and this week. The former are now quite plentiful, anging in price from $4.00 to $12.50 per 00, with fancies at $16.00. The latter run s high as $20.00 and $25.00 for a very imited supply of excellent quality, with rdinary grades at $6.00 to $16.00.

Carnations are now in over-stock and nove very slowly. First grade stock of rdinary sorts is freely offered at $1.50 o $2.00 per 100, with the best of the etter varieties at $2.50 per 100, while ancies are held at $3.00 and $4.00. Inferior stock is cleaned out at 50c. to $1.00 er 100.

Bulbous stock continues very druggy at nuch the same figures as last week, or erhaps a trifle lower. Princeps have een freely offered at $1.00 per 100 for first-class stock and even at this price it has been impossible to dispose of the daily cut at times.

Violets continue in very good supply, though there is a noticeable falling off in the single ones since the hot weather of last week, and it is extremely doubtful if they will hold out until Easter. Good single violets are now held at 50c. to 75c. per 100, with doubles at from 40c. to 60c. per 100. Lily of the valley is very druggy at usual prices.

Lilies have become very plentiful and are moving only fairly well at $8.00 to $10.00 per 100. The shortness of stem is very noticeable throughout nearly all the cut, though there are some very fine flowers for which $12.50 is realized.

From present indications the only decided shortage for Easter will be in single violets. A few Mayflowers have arrived, but coming from some distance did not reach the market in the best of condition. Welch Bros. received a shipment of camellias on Monday, a flower little seen in the Boston markets this Winter, for which quite a good demand was found. F. J. N.

CINCINNATI. — General business is good; stock also; but you might say scarce. Best American Beauty sell at $4.00 per dozen, Bride and Bridesmaid at $5.00 to $8.00; carnations $2.00 to $4.00, the average being $3.00. Golden Gate and Ivory roses bring $4.00 to $8.00; Liberty, $4.00 to $10.00. Bulbous stock of all kinds at the usual prices. Lily of the valley, $4.00. Violets are now about done. Lilium Harrisii is at $12.00; callas, $1.00 to $1.20 per dozen; lilac, 4c. per bloom. Smilax is very scarce. Asparagus realizes 50c. per string. A. Sprengeri, $4.00 per 100. E. G. G.

CHICAGO.—There has been no material change in the market since last report, and from every indication there will be none for some time to come. There seems to be no increase in the quantity of stock arriving. Some houses may report a better supply, while the next two or three visited will not have so much as a week ago. Long-stemmed American Beauty are not in over-abundance, and those coming in find a ready sale at a good price. Bride and Bridesmaid are in about the same condition as last reported. Liberty is not so plentiful in the fancy grades, and but very few of this class are being received. Perle des Jardins and Meteor remain the same, both as regards quantity and price, as last week. Some extra fine Golden Gate are to be seen and are selling well at $10.00 per 100. Sunrise and Mme. Abel Chatenay are both good sellers on this market; the former bring from $6.00 to $8.00 per 100, and the latter $6.00 to $10.00. Lilies of all kinds seem to be more plentiful than a week ago, but they are not moving so readily as they might; this is especially true of callas.

Violets are still a hard article to dispose of at a fair figure. There must have been some cutting of prices towards the last of the week, as the Greek was found selling violets at a nickel a bunch of 25; and he is too shrewd a buyer to sell at less than cost price.

It seems almost impossible to find enough greens to meet all demands. The price remains the same as last report.

Some extra fine double stocks are on the market, selling fairly well at from $4.00 to $6.00 per 100. R. J.

ST. LOUIS.—The few beautiful Spring days of last week made stock of all kinds decidedly more plentiful. To-day (Tuesday) the weather has changed to Winter again, and quite a lot of snow fell. It has been reported that small fruit trees and early shrubs are badly damaged, as a great many of them were much advanced in leaf. This weather stopped the sale of plants at Union Market, which had already begun to look Spring-like. At the wholesale houses roses are looking better, and the price has weakened considerably. Firsts in American Beauty bring $3.00 and $4.00 per dozen. In Bridesmaid, Golden Gate, Bride, Meteor and Liberty, $6.00 to $8.00 per 100 buys choice stock; Perle des Jardins and Souvenir de Wootton, $4.00 and $5.00 per 100.

The supply of carnations is good, fancy stock goes at $4.00, other sorts at $2.00 and $3.00 per 100. White are selling out clean, but some of the colored varieties are suffering for lack of demand. Bulbous flowers are somewhat scarce.

There is a good deal of speculation as to the Easter supply of Lilium Harrisii. Reports from a few well informed growers intimate that there will be plenty for all demands; but that the cut will not be as large as last year. Plenty of Von Sion narcissus were dumped the last week; also colored tulips.

Violets were a great glut last week, but at the present time they are again in demand and sell well at 25c. to 50c. per 100. Quite a lot of sweet peas are in the market just now, and of good quality; these are having a great call at 50c. to $1.00 per 100.

Owing to several large Spring openings, smilax, both cultivated and wild, had a good call. The retail trade keeps up well, and almost everybody reports something doing in large funeral orders. ST. P.

CLEVELAND.—Trade the past week has improved considerably; the bulk of the flowers offered being eagerly sought. Funeral orders are very much in evidence, and these help, or might say are a leading factor, in bracing up the market. Such conditions, with a little dark and cold weather, will send prices up again to the Winter level. Common ferns seem to be the hardest to obtain, as all the wholesalers were out of them most of last week. Smilax and asparagus are also scarce, and buyers are looking for them. One of our largest wholesale houses has issued the following preliminary price list for Easter: American Beauty, select, $50.00 to $60.00; medium, $25.00 to $35.00; shorts, $10.00 to $12.00. Bride, $8.00, $10.00 and $12.00; Bridesmaid, $8.00, $10.00 and $12.00; Meteor, $8.00, $10.00 and $12.00; common roses, $5.00. Carnations, white, selects, $5.00 to $6.00; pink, selects, $5.00 to $6.00; red, selects, $4.00 to $6.00; Harrisii lilies, $15.00 to $18.00; callas, $12.00 to $15.00; daffodils, double, $3.50 to $4.00; single, $3.00 to $4.00; tulips, double pink, $4.00 to $5.00; single red, $3.00 to $4.00; single, white, $3.00; yellow, $4.00; Narcissus poeticus, $2.00; lily of the valley, $3.00 to $4.00; violets, double, $1.00; single, 75c.; sweet peas, $2.00; mignonette, $6.00; smilax, $20.00; maidenhair fern, $1.00 to $1.25; ferns, common, 20c.; galax, 10c. per 100; wild smilax, per case, $5.00. These prices may vary somewhat, but good stock will be sought. G. W. S.

BALTIMORE.—Stock has not been so plentiful during this Lent. Violets, which, as a rule, form one of the main gluts, have been extremely scarce. Roses, and more particularly white carnations, have been at a premium the whole season, and even now they are everything but abundant. E. A. S.

INDIANAPOLIS.—Almost unendurable weather for this season of the year has put all kinds of stock in a poor condition. Bulbous flowers, also carnations and roses, show the effects of the weather to a great extent. They are very soft, and unsatisfactory to handle. Stock kept coming in great quantities during the week, and by Friday and Saturday there was a glut hard to overcome.

No. 1 Bridesmaid and Bride sell at 6c. to 7c.; Perle des Jardins and Sunrise, 5c. to 6c.; Liberty, 7c. to 10c.; seconds and shorts vary from $1.00 to $3.00 per 100. Bride are outselling other colors by a wide margin. American Beauty are plentiful, but the quality is not so good as during past weeks.

Carnations are not overplentiful; good varieties sell at $2.00 to $3.50 per 100; 75c. per dozen is the retail price for them.

Violets are getting smaller, and if the present weather continues they will be very scarce for Easter.

Harrisii lilies are plentiful. The demand for them is good, at $3.00 per dozen, retail; $1.50 per dozen wholesale. I. B.

LOUISVILLE, KY.—Business continues good, especially brisk being the demand for decorative work, as the majority of the department and millinery stores have been holding their annual Spring openings. Prices received for decorations are nearly always close, as the largest decorations are let out by bid, and competition is keen here. Retail prices for cut flowers remain about the same as last quoted. A. R. B.

GRAND RAPIDS.—We have had a taste of Summer weather, the thermometer registering 70 to 80 degrees. Some thought Spring had come early, and actually bought geranium for planting out. Winter is with us again, however, a blizzard of snow and high winds, with thermometer as low as 21 degrees.

Trade is a little slow, but shipping business remains good. The demand and supply are about equal, except on some days, when roses are scarce. Pot plants for Easter are coming along nicely. There will be plenty of bulb stock in pots, but when it comes to cut flowers they are going to be very scarce; that is, roses and carnations. G. F. C.

Canadian News

Toronto.

News Notes.

Fred Brown, who has sold out his store on Queen street, is managing the flower department of the R. Simpson Company's store.

T. S. Chambers, youngest son of our Park Commissioner, John Chambers, died on Saturday last. He was a very bright young man, and was in his twenty-fourth year. He was well known as a cricketer, and had played on the international team in several American cities. Interment took place on Tuesday, the 24th. There was a very large attendance at the funeral. The floral work was of a high character. His father, mother, and family have the sympathy of the profession here in their sad bereavement. T. M.

Montreal.

The News.

A burglar favored Bertie Graves with a visit the other night. Entrance was effected by removing a pane of glass from the stable window. Mr. Graves was awakened by his dog and gave the midnight visitor a good run, but failed to capture him. Being in such a hurry getting out, the thief did not succeed in carrying off anything.

Fred Copperthwaite has a monopoly of the growing of cauliflowers (early Erfurt) around here. He says they pay very well, being preceded by a crop of lettuce and succeeded by bedding plants. W. C. H.

St. John, N. B.

John Cruikshank, Lancaster, who suffered so badly in a financial way by the fire of supposed incendiary origin last August, has his greenhouses and flower-growing premises nicely rebuilt.

MONTREAL.—The prospects for a large supply of Easter flowers and plants are not encouraging. The present mild weather will help along belated batches of stock that would not otherwise be in; but lilies, owing to such a large number of them being diseased, will certainly be very scarce. Crimson Rambler roses have not flowered very well, probably because the wood did not ripen well last Fall. Spiræas are to be had in quantity, and of good quality. Lilacs, snowballs, hybrid roses and azaleas will be available, but only in some cases will the quality be up to the mark. Bulbous stock is plentiful and well grown.

Jos. Bennett's Crimson Rambler roses are again a feature of the Easter market this year. These are of last year's propagation, planted in the field from two-inch pots lifted in the Fall after the first frost, stored in the bulb shed until about Christmas, when they are potted two or three in a pot, and grown cool. They flower freely and make nice dwarf plants that sell on sight.

S. S. Bain shows the finest stock of hydrangeas seen in this section for some time. Grown in from five to nine-inch pots, they form a valuable addition to his extensive supply of Easter stock.

P. McKenna & Son have the only real healthy batch of Harrisii lilies to be seen, bearing from seven to eleven flowers. If one could rely on getting such bulbs every year, there would be some encouragement in growing this lily. W. C. H.

LONDON, ONT.—Bride and Bridesmaid, $5.00 to $10.00; Golden Gate, $5.00 to $10.00; carnations, inferior grades, all colors, $2.00; standard varieties, $3.00 to $4.00; daffodils, $2.00 to $3.00, hyacinths, $2.00 to $3.00; lilies, $15.00; lily of the valley, $2.00 to $3.00; narcissus, $2.00 to $3.00.

The continued mild weather has increased the quantity of stock until now, with the exception of white carnations, there is enough to supply the demand. Prices remain much the same. Bulbous stock is plentiful, and moves fairly well, considering the mild weather. G.

TORONTO.—Business has picked up a little, but the supply appears to be inexhaustible. Bulbous stock, lily of the valley, violets, roses and carnations are to be had of fine quality and almost in any quantity. Some Emperor and Empress narcissus are very fine, and generally find ready sale. Lilies are not quite so plentiful, and there are indications that though Easter is late this year there will be quite a few belated lilies. Most of the plants around look well, but several are just a little behind. Azaleas will be fairly plentiful. There are several lots of pot roses that will be about right. Cut stock will be in sufficient supply. The demand will be about the average. Spiræas are not so much in favor as formerly, but there are some very nice ones around. The department stores are having quite large floral decorations this week and they will use up a big stock of plants that are not fit for much else. These stores don't mind much about the quality, generally, so long as the stock is showy and cheap. T. M.

Easter Plants

Blooming Easter Week or Before.

I have an immense stock of the finest and choicest in Philadelphia, and in such quantities that exceed anything that I have ever offered before. Several new greenhouses have been added to our large establishment, and these, with many hotbeds, are devoted to the entire cultivation of Easter plants alone; therefore I will be prepared to fill all orders if sent in time as far as the supply will reach.

AZALEA INDICA.

Have two houses 20 x 100 feet full of these choicest and most favorite Easter plants. Most of my customers already know that I am agent for a large concern in Ghent (Belgium), O. Vanden Plas; therefore I can offer you plants at first hand and not through the middleman. In the interest of my customers I go there every year if possible and select my stock personally for the American market. **Notice:** My Azaleas as soon as they arrive from abroad are planted in pots and pinched out as often as it is necessary and taken care of all winter, while some florists place their plants in hot-beds or frames without pots until sold.

MME. VAN DER CRUYSSEN is a rare article this Easter, but as a novelty I can offer about 700 (6-in. pots) of the finest middle-sized plants of this variety, and these are the finest you ever laid your eyes on, as round as an apple, covered with buds. Price, 75c., $1.00, $1.25 each. Specimen plants, 10 and 11-in. pots, $4.00 and $5.00 each.

Other choice varieties in double white, we have Niobe, Bernhard Andreas alba and Deutsche Perle. In pink we have Simon Mardner, Dr. Moore, Memorier, D. L. Van Houtte, Paul Weber, etc. In variegated we have Empress of India, Prof. Walters, Vervæneana, and about eighteen more best varieties of all shades and colors, too much to mention. Price, 6-in. pots, 60c., 75c., 85c., $1.00 and $1.25 each. Specimens, 7-in. pots, $1.50 and $1.75 each.

AZALEA MOLLIS, a novelty when in bloom, 6-in pots, 60c. and 75c.

SPIRÆA COMPACTA, 6-in. pots, $3.00 per dozen (my own importation, fine, bushy plants).

CINERARIA HYBRIDA (perfect jewels), all shades and colors, full of buds and flowers, 6-in. pots, $3.00 and $4.00 per dozen; specimen plants, $5.00 per dozen, smaller plants, 5 and 6-in. pots, $2.50 per dozen.

DAISIES, white and yellow, 6-in. pots, $3.00 per dozen.

LILIUM HARRISII. Have about 2500 of these (H. F. Michell's selected bulbs, 7 x 9, at $120 per 1000); height from 15 in. to 36 in., 5 to 12 buds to the plant, at the rate of 10c. per bud. Lilies are scarce; other plants must accompany the order.

HYDRANGEA OTAKSA (pink). Have a large housefull in tip-top condition, better than ever; strong plants, 6-in. pots, $4.00, $5.00, $6.00 to $9.00 per dozen. Specimens, 7-in. pots, $1.00, $1.25 and $1.50 each (a few white ones at $3.00 per dozen).

BEGONIAS. Pres. Carnot, 5-in. pots, $2.00 per dozen; 6-in. pots, $3.00 per dozen.

BEGONIA Metallica, 6-in. pots, very large and bushy, $4.00 and $5.00 per dozen.

BEGONIA Vernon (dark red), a new variety from Switzerland, 6-in. pots, full of flowers, $3.00 per dozen.

BEGONIA Vernon (dark red), 4-in. pots, $1.50 per dozen.

BEGONIA, Mixed, 4-in. pots, $1.20 to $1.50 per dozen.

HYACINTHS, all named varieties, from first-sized bulbs of my own importation, all fine shades, $10.00 per 100.

TOURNESOL TULIPS (double red and yellow striped), best double Tulips in existence, sell at sight, three bulbs in a 4-in. pot, $1.50 per dozen pots.

DAFFODILS (Von Sion), double-nosed, three bulbs in a 5-in. pot, unusually fine this year, $2.00 per dozen pots.

Mr. G. Aschmann has very fine azaleas, hydrangeas, Easter lilies, spiræas, cinerarias, tulips hyacinths and other plants in bloom and bud. We very highly recommend our customers to Mr. Aschmann for fair and reliable business treatment. (Signed) Henry F. Michell, 1918 Market St.

No use talking, Mr. Aschmann has a very fine lot of Easter plants, and I am greatly surprised at the low prices quoted on same. I can recommend Mr. Aschmann to anyone, as I have known him for the past 29 years. (Signed) Geo. Huster, head gardener of Girard College, Philadelphia, Pa.

There is nothing too much said in Mr. Aschmann's ad.; all that is said is true. (Signed) Thomas Logan, head gardener to W. L. Elkins, Ashbourne, Pa.

On account of saving express charges please mention if plants are to be taken out of pots or not.

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere, only 25 minutes' ride from City Hall. Take 13th St. car, or Germantown car, 8th and Market Sts. north to Ontario St. and walk one square east. Cash with order, please.

Money can be sent safely by Express or Postal Money Order, Registered Letter or Draft.

All goods shipped at purchaser's risk.

DEAN'S

System of Greenhouse Heating

PRICE, $2.00.

Syracuse vs. Utica.

A delegation of Syracuse florists visited Utica on March 18 as the guests of the Utica Florists' Club. They visited the greenhouses of Messrs. Crowe, Rowlands Pfeiffer and Mathews and spent some time in visiting other places of interest At 6:30 o'clock, in the company of the Utica florists, they went to the Arcanum Club, where a fine supper had been prepared by Caterer Stockhauses. At Maennerchor Hall a bowling contest was held The scores were:

UTICA.

McLean	118	99	62	87— 36
Baker	150	154	142	154— 60
Rowlands	121	122	141	101— 48
Spencer	121	142	114	129— 50
Pfeiffer	125	139	140	150— 55
Mathews	99	118	114	124— 45
Hoffman	140	110	119	106— 47
Day	107	160	139	153— 55
McGowan	97	111	86	90— 38
Brain	99	71	101	84— 35
				4749

SYRACUSE.

Quinlan	96	95	152	117— 46
Davis	102	103	122	136— 46
Dow	112	106	138	114— 47
Growell	143	99	116	121— 47
Heller, Jr.	146	151	151	145— 69
Heller	110	106	117	117— 45
Messer	108	131	119	119— 47

Brandt	142	138	129	137— 64
Powers	81	85	95	93— 35
				495

It will be seen that the visitors were victorious by 205 pins. The best work for the Uticans was done by Baker, Spencer, Pfeiffer and Day, and for Syracuse by Heller, Jr., and Brandt.

WASHINGTON, D. C.—The Retailers beat the Growers by 158 pins on March 25. The Washington bowlers are doing some very good work, and expect to be in the race next convention in Milwaukee The scores were as follows:

Retailers.		Growers.	
Cook	147	Ernest	16
Smith	118	Barber	14
Kimmell	121	Clark, Jr.	8
Wolf	165	Ash	14
Shine	102	Clark, Sr.	14
Davidson	119	Herold	8
Freeman	160	Davis	10
Jones	108	Kramer	124
Bauer	92	Minder	95

C. W. W.

ST. PAUL.—While there has been an occasional dull day during Lent, trade on the whole has been very satisfactory. As is usual during March, the weather has been of all sorts, some of which was not altogether desirable for either selling or growing stock. However, there has been an abundance of sunshine, and flowers have been greatly improved in quality, as well as more plentiful. A few days of dark, damp weather the past week shortened the cut so that the supply now is hardly equal to the demand. Violets, which have been off crop all Winter, are becoming quite plentiful, and prices are away down. Good stock has been sold as low as $3.00 per 1000, though the usual run is from $5.00 to $7.50. Carnations at 50c. per dozen, retail, are becoming quite common, but good blooms are worth from 75c. to $1.50, according to the quality. Roses hold up well, good stock retailing at $2.00. Bulbous flowers are very abundant, some of the poorer ones not finding any market at all. We fear that the plethora now will mean a dearth at Easter. Every one anticipates a nice Easter trade, and is preparing accordingly. The growers have their stock well along, and unless an unforeseen calamity occurs there will be sufficient for all demands.

VERITAS.

WASHINGTON, D. C.—Trade has slackened down somewhat the past week, and I expect it will remain so until Easter. Roses are somewhat poorer in quality, but are more plentiful on account of the warm weather.

All kinds of potted plants will be scarce for Easter, if the weather conditions are the same as they have been; but roses and lilies will be plentiful. The florists here expect a good Easter trade. Prices are about the same as last week.

C. W. W.

PROVIDENCE, R. I.—We have had constant rain, followed by an occasional day of delicious warmth and brightness. Business is good in some branches and quiet in others. Flowers are plentiful, excepting a short crop in roses for a few days. Violets are shy, and causing worry.

C. S. M.

FOR YOUR CUSTOMERS

Success with House Plants

..By..

LIZZIE PAGE HILLHOUSE

A COMPLETE text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price Cloth, $1.00; Paper 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz. that the more successful a customer is with plants the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller. Send for sample pages.

The American Carnation

How To Grow It

A Standard Work Written by Request of the Publishers of the Florists' Exchange.

By C. W. WARD

THE CARNATION in America has reached a status and importance in the florist's industry possessed by no other flower of modern times, and a practical work on the subject of the cultivation of the plant has become an urgent necessity. This want is fully and completely met in the present volume, which furnishes the results of years of actual experience of the author, who is recognized as being among the foremost of carnationists in America. The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation—The Carnation in America—The Commercial Importance of the Carnation Industry—The American Carnation Society—Use of Carnations as a Decorative Flower—General Greenhouse Culture—Soils—Manure and Fertilizers—Propagation and Shipping of Young Stock—Treatment of Young Stock preparatory to Planting Out—Field Culture—Lifting and Planting Carnations from the Field—Treatment after Benching—Picking, Packing and Shipping Carnation Flowers—Insects and Preventives—Diseases and Injuries—Packing and Shipping Field-grown Plants—Forcing Houses for Carnations—Bench Construction—Sub-irrigation—Heating Carnation Houses—Carnations for Summer blooming—Bedding and Hardy Carnations—Carnations for Pot Culture—Raising Carnations from Seed—Cross breeding and Fertilizing—Varieties—Sports and Variations—The Ideal Carnation—Traits and Peculiarities—Various Classifications of the Carnation—List of Varieties for Different Localities—The Future of the Carnation—Its Commercial aspect and Prices—Who shall engage in Carnation Growing—Does it Pay to do things Well—Calendar of Operations—Carnations in California, Canada, in the West, the East, the South.

It will at once be seen that a work of this nature should be in the hands of every florist and others interested in the subject who desire to keep abreast of the times, and to make the growing of carnations, by the most modern methods, a profitable part of their business.

The Book is profusely illustrated by original engravings from life made specially for this work, with four colored plates. Handsomely printed from large, clear type on fine enameled paper. Quarto, cloth. Price, $3.50.

NEW ORCHID-FLOWERED DAHLIA 20th CENTURY

DAHLIAS

The Best Sell on Sight at Fancy Prices

> Philadelphia, September 18, 1902.
> **W. P. PEACOCK, Atco, N. J.**
> **Dear Sir:** The shipment of Dahlias which came in this afternoon was very fine indeed. We sold nearly all immediately upon arrival, and the 20th Century we sold at $4.00 per hundred.
> Yours very truly, SAMUEL S. PENNOCK.

Do Not Try to **Save Money by Buying Cheap Dahlias,** but **MAKE MONEY BY GETTING THE BEST**

Peacock's Orchid Flowered Single Dahlia

20th Century

is the best of them all. Strong field-grown roots, 35c. each, **$3.50** per doz., **$25.00** per 100. Strong plants, **25c.** each, **$2 50** per doz., **$18.00** per 100. Seed, **15c.** per packet; 7 packets for **$1.00.**

> Philadelphia, Pa., September 25, 1902.
> **W. P. PEACOCK, Atco, N. J.**
> **Dear Sir:** In to-morrow's, Friday afternoon, shipment we want at least one hundred Perle d'Or, the fluffy white Dahlia resembling a chrysanthemum; also three hundred (300) more to reach us Saturday afternoon sure. You might also let us have three hundred (300) Perle d'Or Saturday morning if possible.
> Please do not fail us on these, and also acknowledge receipt of these orders, and oblige, Yours very truly,
> S. S. PENNOCK.

Clifford W. Bruton Is still the best yellow Dahlia for decorative purposes. Immense flowers on 3-foot stems sell readily at $4.00 per 100, and in immense quantities at $30.00 per 1000. Our stock of this variety has been carefully selected for years and is double to the center. Propagation causes flowers to come semi-double, so we offer extra strong clumps only **$8.00** per 100.

Perle d'Or (Perle de la tete d'Or). Very large, fluffy white strong plants, only **$6.00** per 100; **$55.00** per 1000.

Henry Patrick Very large, pure white, decorative, fine form, long stems; roots, **$8.00;** plants **$6.00** per 100.

Storm King Best pure white Show Dahlia, early and profuse; strong plants, **$8.00** per 100.

Pink Dandy Best pure pink show Dahlia, a great improvement over A. D. Livoni, larger size, longer stem and better color. Strong plants, **25c.** each; **$2.50** per doz.; **$18.00** per 100.

Mrs. Roosevelt Of immense size, delicate shell-pink, a strong vigorous grower and free bloomer. A great improvement over Grand Duke Alexis. Strong plants, **30c.** each; **$3.00** per doz.

Red Hussar Richest crimson scarlet, the best bright red show Dahlia; large size, long stems, vigorous grower, profuse bloomer. Extra strong clumps, **15c.** each; **$1.50** per doz.; **$12.00** per 100. Extra strong plants, **10c.** each; **$1.00** per doz.; **$8.00** per 100.

Frank L. Bassett Large, bluish purple, extremely profuse bloomer. Roots, **25c.; $2.50** per doz. Plants, **20c.; $2 00** per doz.

Eureka Very large, deep rose-pink, profuse bloomer, full to center. Roots, **$2.50** per doz. Strong plants, **$2.00** per doz.; **$12.00** per 100.

> Grand Rapids, Mich., March 22, 1903.
> **W. P. PEACOCK, Atco, N. J.**
> **Dear Sir:** Please send enclosed order for Dahlias by express. No substitution. You are so reliable and stock true to name it is a pleasure to deal with you.
> EVELYN ARNOLD.
